GOODELL-PRATT

1500 GOOD TOOLS

NON-BREAKABLE

It's All-Steel

How would you like to handle a Mitre Box that will not break; one that does not need repairs; a box that is strong and accurate, attractive in appearance; one that has many special features and is being pushed by forceful and effective advertising?

There is only one Mitre Box that answers all these requirements. That is the Goodell. Every single piece used in its construction is steel. It is made in all the best selling sizes, both with and without saws. The prices of these Mitre Boxes are reasonable.

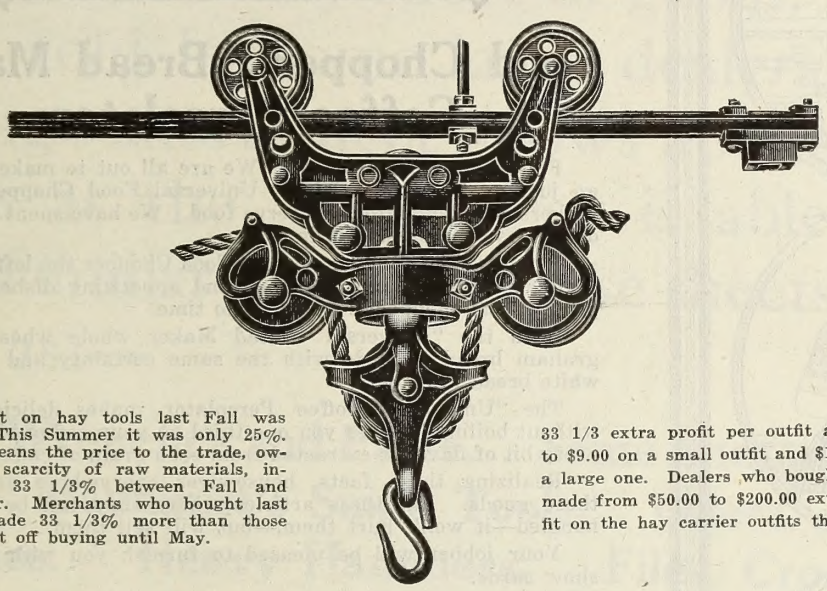
BT Pumps **Churns** **Washing Machines** **Hay Carriers**
Ladders **Barn Door Track** **Tanks** **Hog Troughs**

$9.00 to $18.00 Extra Profits



Discount on hay tools last Fall was 40%. This Summer it was only 25%. That means the price to the trade, owing to scarcity of raw materials, increased 33 1/3% between Fall and Summer. Merchants who bought last Fall made 33 1/3% more than those who put off buying until May.

33 1/3 extra profit per outfit amounts to $9.00 on a small outfit and $18.00 on a large one. Dealers who bought early made from $50.00 to $200.00 extra profit on the hay carrier outfits they sold.

Buy Your Stock on Hay Tools Now

Because of the shortage of steel and high price of malleable iron, prices are sure to go up again soon.

There will be a shortage of hay tools next year, just as there was a shortage this year and the year before. We will fill all orders in their turn. Those who order first will get their goods first.

July 1st terms are given on hay tools ordered now for delivery before May 1st.

You will make an increased profit of from $9.00 to $18.00 by ordering now, and you will be sure of your stock for the hay tool season next summer.

Order from our salesman or nearest branch.

GOODS TO PUSH

UNIVERSAL

Food Choppers, Bread Makers Coffee Percolators

Food to-day costs money. We are all out to make this food go just as far as possible. Universal Food Choppers, Bread Makers and Percolators conserve food. We have spent thousands of dollars to impress this fact.

By the use of the "Universal" Food Chopper the left-over bits of food are made into delicious and appetizing dishes and the price of the chopper is saved in no time.

With the "Universal" Bread Maker whole wheat, rye or graham bread is made with the same certainty and ease that white bread is made.

The "Universal" Coffee Percolator makes delicious coffee without boiling. Saves you one-third on your coffee bill because every bit of flavor is extracted from each grain of coffee.

Realizing these facts, housewives everywhere are buying these goods. Put these articles where they can be seen and handled—it won't hurt them,—but will sell them.

Your jobber will be pleased to furnish you with Universal show cards.

SHORTAGES

No doubt you have remarked that most Jobbers are very short of goods. We have been told by some large dealers that the average short sheet shows about as many items as the Wholesaler is able to ship. The familiar items on these sheets are such lines as:—

Stillson Wrenches and Parts. Some lines of Carpenter's Tools. Machinist's Small Tools. Oilers. Machinist's Wrenches. Heavy Hammers. Files, Cross Cut Saws. Twist Drills. Saw Tools. Carriage and Machine Bolts. Wood Screws. Sand Paper. Emery Cloth, etc.. Valves, Bibbs and Fittings.

Our stock is fairly well assorted on these lines.

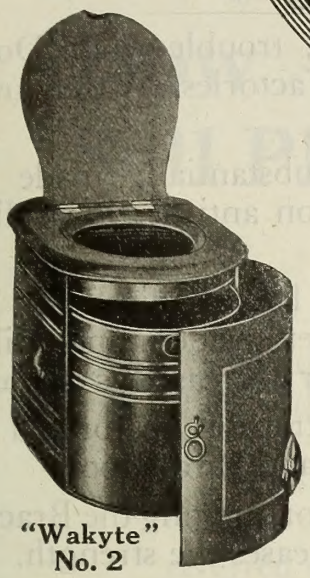
WAKYTE M'F'G Co.
WAKYTE
WINNIPEG · CANADA.



"Wakyte" No. 2

The "WAKYTE" Label on goods represents

To the Dealer:
A quick turnover at a good profit.

To the Consumer;
Reasonable prices and absolute satisfaction.

The "Wakyte" Special

WAKYTE IMPROVED SANITARY CHEMICAL CLOSETS embody all the latest improvements. Their special construction has resulted in a saving of nearly 50% in freight, while their Superior Quality and low prices are enabling the Hardware Merchant to meet outside competition, and at the same time supply his customers with a better class of goods. We ask for no fairer trial than a comparison of our goods and prices with anything on the market. "WAKYTE" Closets are made in three designs, but only **ONE QUALITY.**

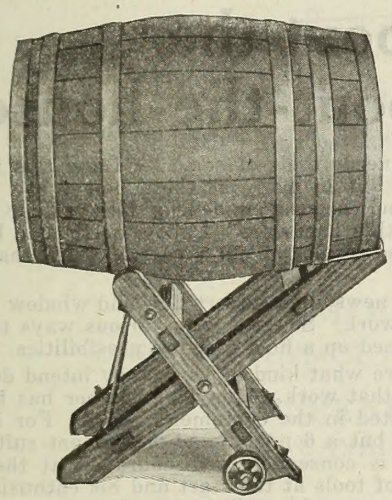
"Wakyte" No. 3

"WAKYTE" No. 2 is especially adapted for Schools, Hotels, Banks and Private Families. The tank is removed from the front by opening the door.

"WAKYTE" No. 3 is a high-class closet for family use. It is similar in design to No. 2, only the tank is removed from the top by raising the seat. This is, without doubt, the best value on the market.

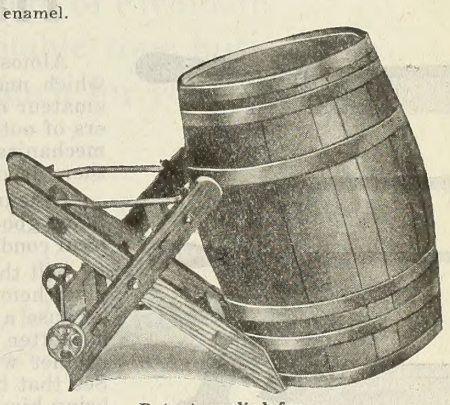
"WAKYTE" Special was placed on the market to enable the Trade to supply a closet at a price that would make it possible to meet competition from any source.

The seats of all "WAKYTE" Closets are finished in Mahogany, and the bodies in maroon enamel.



Patent applied for.

The ease with which barrels are handled with the "Wakyte" Truck has resulted in its adoption by a great many retail stores throughout Canada, and to-day "Wakyte" Trucks are being stocked by most of the Wholesale Hardwares. They are inexpensive, will last a lifetime, and no dealer can make a better investment than by equipping his store with them. Answers three purposes, viz.: Hoist, Truck and Permanent Stand for holding barrels of Liquid.



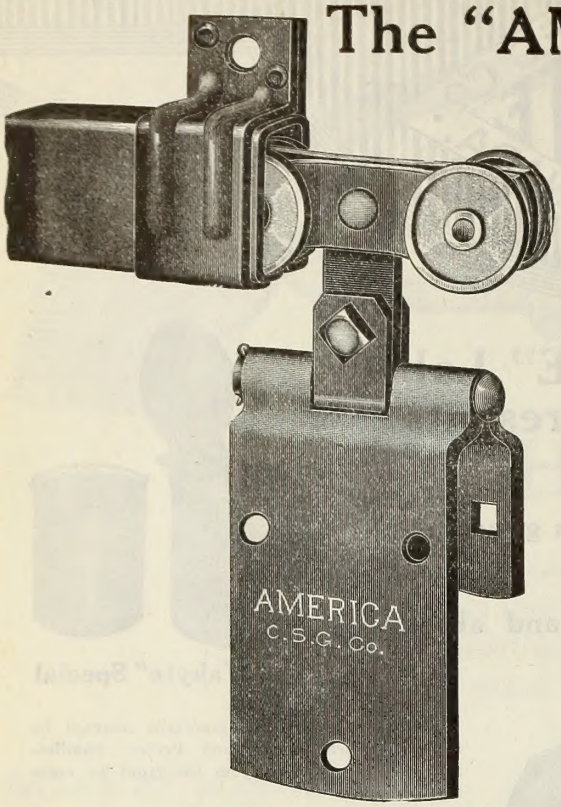
Patent applied for.

Manufacturing QUALITY goods, and selling them at low prices has resulted in the general public demanding Wakyte Products in preference to other makes. Most of the Hardware Dealers throughout Canada have recognized the advantage of handling Wakyte Closets, and are now stocking them. This is the season of the year for the sale of Wakyte Closets. There is a big demand for these goods in your territory; a quick turnover and a good margin of profit, and if you have not a supply on hand, you cannot make money faster than by placing your order NOW.

A complete stock of Wakyte Closets is carried in Ontario to ensure prompt service to our Eastern Trade. We are prepared to appoint Agents in all parts of Canada.

Write for Full Particulars.

Wakyte Manufacturing Co., Limited 259-261 Stanley Street WINNIPEG



The "AMERICA" Tandem Truck Trolley Hanger

A practical, efficient, trouble-proof Door Hanger for Barns, Factories, Warehouses and Garages.

The "America" is substantially made of heavy steel and runs on anti-friction roller bearings.

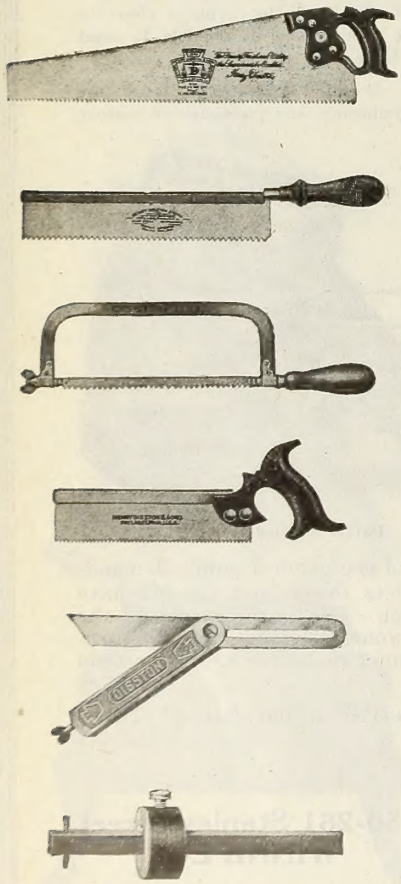
Has flexible joint and lateral adjustment by which the space between the door and building can be increased or decreased as desired.

The double grooved track is so formed to make it Water, Snow and Bird-Proof.

Notice the method of corrugating the Brackets, which greatly increases the strength.

We solicit your enquiries or request to have our representative call.

Canada Steel Goods Company, Limited, Hamilton, Ont.



How about the "Handy-man-about-the-house"?

Almost every home can use and really needs tools of some kind and this is a field which many dealers neglect to cultivate. But in many of these homes are potential amateur mechanics who would, if assisted and encouraged, develop into regular purchasers of not only a variety of tools, but also other hardware. Almost every man has some mechanical ability and we all like to see the results of our own skill. All that lots of them need is a start. **Cultivate this field.**

Encourage the "home-mechanic" in your newspaper advertising and window displays. Show good samples of home-made cabinet work. Suggest it in various ways that your local conditions offer and you will have opened up a field of large possibilities.

Sell them only high-grade tools. Enquire what kind of work they intend doing and give them the particular style suitable for that work. Many a customer has been lost because a clerk was not sufficiently interested in the customer's needs. For instance, no better saw is made than the DISSTON, but a 6 point hand saw is not suitable for cabinet work in hardwood. The amateur is consequently discouraged at the outset. See that he has the right quality and type of tools at the start and his enthusiasm will bring him back to add to his kit and equipment as his skill and requirements expand.

A fine foundation is a set of

DISSTON SAWS

How We Help You Sell Plymouth Rope

"We appreciate the many things you are doing to co-operate with the merchants in furthering the sale of Plymouth rope."

Thus runs a recent letter from a typical Plymouth dealer. And here are two of the forms of co-operation referred to.

A free advertising service which enables you to show more people why they should buy Plymouth Rope and where they can buy it.

A plan for retailing Plymouth Rope by the foot, which enables you to sell more people—and to do this with less effort and greater profit per sale.

These two factors are helping thousands of Plymouth dealers to build larger and more profitable rope businesses. The same factors will do as much for you.

FIVE FACTS ABOUT FAMOUS FIVE FILES

They are made from High Carbon Steel.

The heat treatment of each file is scientifically determined.

The grinding is done by machinery, which insures a perfect surface for cutting.

The teeth are mathematically accurate, insuring a sharp, even cut.

They are recognized as standard tools by mechanics everywhere.

Be on the safe side, therefore, and specify "Famous Five" Files when ordering.

The Experience of Successful Merchants

YOU would welcome the advice of over 1,000,000 successful merchants as to the best and most efficient way of conducting your business.

This is precisely what you get when you install a modern up-to-date National Cash Register. For over thirty years the National Cash Register Company has received suggestions from merchants all over the world as to the best way of perfecting Cash Registers. These ideas are put in practical operation by our expert mechanics—and the result is a machine which is almost human in its workings. In one particular it differs—it never forgets—it never makes mistakes.

A National Cash Register will relieve a merchant of needless work and worry. It will give him time to look after the bigger things in his business.

It is to your interest to write us to-day. We will show you how a National Cash Register will save you money.

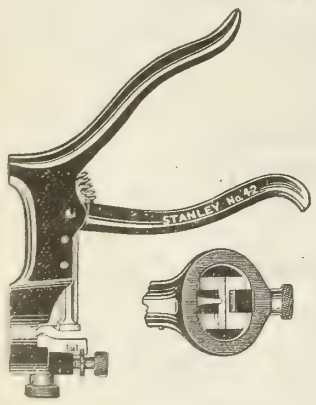
and other well-known lines

Because we consider it to be in our clients' interests to offer goods made by the best known manufacturers in preference to others.

First of all the names of these goods are firmly established in the minds of the buying public, who have full confidence in them.

Then again we consider it to be a decided advantage for a dealer to have the maker's guarantee behind each article as well as our own.

This, coupled with the advertising carried on by all these concerns in magazines and papers throughout the country, creates a demand for their products that makes the sale easy and that of substitute lines difficult.



Why waste time creating an interest in goods you know little about, when you can secure the same articles made by firms whose reputations are firmly established for manufacturing quality goods at reasonable prices?

Remember all our goods carry the C.L.Co. guarantee.

What Blade Does He Use?

A mechanic enters your store with a requisition slip.

"I want a gross of 12-inch hack saws," says he.

You have 12-inch blades for two dozen purposes, what are you going to give him? And when you do find out what material he is going to cut is it easy to choose the blade that will cut best? It is if you choose from

Starrett Hack Saws

They are standardized. From the information on page 208 of the Starrett Catalog you can quickly supply the blades that cut best.

Whether the mechanic across the counter wants to cut sheet metal or cast iron, brass or tool steel you can give him the finely tempered tungsten steel blade with teeth carefully milled, set and spaced to cut most in the shortest time.

A post card brings a catalog describing the saws that cut faster and last longer. Ask for Catalog No. 21MA.

OVER 50,000 COPIES PER MONTH

Canadians

should be thankful that our Country has a Canadian Magazine fit to take its place in the company of the big American magazines — a magazine equalling in interest and literary merit the big magazines produced in a Country of 100,000,000, where it is possible to obtain $1,000 to $5,000 a page per issue or more for advertising space.

A Magazine *of* Power

THE making of MACLEAN'S MAGAZINE month by month, year after year, has been hard labor. One difficulty was to get the right sort of matter—Canadian in origin and theme. A few years ago our country possessed few writers and artists of trained and high ability. To-day, thanks very largely to MACLEAN'S MAGAZINE, we have men and women writers and artists producing first-class work; they developed when they found a medium demanding a grade of work equalling the best contributors to American magazines. Also, the Canadian writers and artists who were finding a market for their wares in the United States turned to MACLEAN'S when this magazine showed itself to be a sufficient and creditable vehicle for their work.

The future has a good crop of A1 Canadian writers and artists in store, whose work will appear in MACLEAN'S; but consider these names of Canadian men and women who have already "arrived," and whose work appears in MACLEAN'S MAGAZINE:—

Sir Gilbert Parker,
Arthur Stringer,
Arthur E. McFarlane,
Stephen Leacock,
Robert W. Service,
Alan Sullivan,
Agnes C. Laut,
L. M. Montgomery,
"Janey Canuck,"
A. C. Allenson,
E. Phillips Oppenheim,
Peter McArthur,
L. B. Yates,
Geo. Eustace Pearson,
W. A. Craick,
H. F. Gadsby,
C. W. Jefferys,
J. W. Beatty,
Arthur William Brown,
Lou Skuce.

These are some of the names of Canadian men and women writers and artists—who are doing work of the highest class, acceptable to the hardest-to-get-into publications of the United States. Ten years ago such a Canadian galaxy had no existence.

BESIDES these professional writers and artists—men and women who depend on their pen and pencil and brush for their livelihood—is a big host of others who write only when successfully urged to do so—because they have something to say that is worth saying. These are usually men in a big way of business, or professional men at the top of the ladder, or men and women doing unusual work of a most important sort—often obscurely because they are not self-trumpeters of their achievements or labors. For example, such men and women as:—

THE LATE SIR MORTIMER CLARK
JOHN BAYNE MACLEAN
ERMAN J. RIDGWAY
LORD NORTHCLIFFE
JOSEPH MARTIN, M.P.
BILLY SUNDAY

All these have contributed under their own name or a nom de plume to MACLEAN'S MAGAZINE in the last 12 or 15 months, recognizing that this magazine can give their messages to the whole nation, and to a class of persons whom they wish to reach.

NOBODY who knows MACLEAN'S would ever call it a story magazine, but rather a national magazine—almost a news magazine. Stories there are in every issue—enough of them to satisfy the right and natural desire for romance, adventure, achievement, business, love and intrigue. But the greater part of the contents of every issue of MACLEAN'S MAGAZINE may be called **NEWS**—NEWS of men and their work and triumphs; news of the nation's work and workers; news of discoveries; news of movements; news of politics; news of the builders and building of Canada. MACLEAN'S, as Canada's National Magazine, prepared for thinking and intelligent men and women, must be an informative and interpretive magazine, must mirror national opinion, record national affairs and developments, and be the **VOICE** of prophets, statesmen and leaders. MACLEAN'S is a magazine of to-day—a newspaper of a sort, dealing with big news passed over by daily newspapers whose function is the recording of the day's news—passing news; and who leave the fuller statement—the summed-up presentation of things they can but touch on—to MACLEAN'S MAGAZINE.

News features of MACLEAN'S MAGAZINE greatly liked by its 50,000 readers are

The Business Outlook—article.
The Investment Situation—article.
The Review of Reviews Department.
The Nation's Business.
Women and their work.

These are regular department features appearing in every issue of MACLEAN'S. They are of the nature of surveys or digests, and perform a service welcomed and praised by all readers who aim to keep themselves broadly informed concerning what's doing in Canada and what's being thought and said and done the wide world over.

REVIEW of Reviews is the outstanding feature of MACLEAN'S, in that it gives the best articles, in condensed form, from the best magazines of the world. A staff of trained people read and study the contents of all magazines and select for each issue of MACLEAN'S twenty or more articles which mirror the world's progress and present the changing aspects of world opinion.

IN rounding out this presentation of Canada's National Magazine a brief reference may be made to one large and discriminating and important class of contributors to it—advertisers. Literally hundreds of them employ MACLEAN'S for their advertising, to reach the influential classes represented by MACLEAN'S list of subscribers, and because they get national publicity economically. These makers and producers of goods of national consumption appreciate the fact that a select circulation of 50,000 gives them, among the most important families of Canada, strong local publicity as well as broad national publicity, and that retail distributors are both canvassed and assisted by their national advertising in MACLEAN'S MAGAZINE. They recognize that $1,000—$3,000 invested in space in MACLEAN'S MAGAZINE to buy 365-day national influence is dirt cheap publicity.

THIS is but condensed presentation of MACLEAN'S MAGAZINE. Very much more can be said about its editorial policy and character, about its making, about its quest for and development of new contributors, about the policy that keeps canvassing methods and advertising columns clean, about the hearty approval of subscribers of MACLEAN'S MAGAZINE, about the significance of 50,000 circulation, about the wisdom of doing a "little advertising in a few magazines" as an initial step in national advertising plans; about the advertising of MACLEAN'S MAGAZINE in all the MacLean Publishing Company's list of business and technical newspapers, about the influence of MACLEAN'S MAGAZINE on distributors.

But time and space forbid here and now a continuation of the MACLEAN story.
What is enough to be impressed is—

Every man who comes into your store will thank you for introducing

Carborundum Razor Paste

APPLIED to the sharpening side, it revives the sharpening powers of *any* strop—brings the dull razor quickly to an edge—lessens the need of honing.

Carborundum Razor Paste is the finest of Carborundum powder—a powder so fine that it floats for one hour—mixed with a scented wax put up in handy sticks.

You just rub it on the strop—then two or three strokes and the razor is ready for the finish stropping. It cuts the edge on the razor, cuts it quick and clean without injury to the finest blade without fuss or trouble.

Each stick is wrapped in tinfoil and packed in individual cartons

When ordering, see that you get the Carborundum Razor Paste Display Rack. A mighty attractive metal display lithographed in five colors, showing "Pete" at his best.

WARE MFG. CO. LTD. OAKVILLE PURE ALUMINIUM WARE

Your Customers Want Aluminium With This "Oakville" Brand

Aluminium Kitchenware is coming into its own. Housewives are demanding better cooking utensils and they are finding them in

Oakville Aluminium Ware

The superior qualities of Aluminium Ware bearing the "Oakville" Brand are being explained to the housewives in every community in Canada by our liberal campaign of advertising.

This advertising is creating the demand for "Oakville" Aluminium Ware. It is the most satisfactory line of cooking utensils that you can handle. Nothing else pleases your customers as well and no other line gives you better profits.

TEAKETTLES

Teakettles are an especially good line to feature just now. The advanced cost of other metals means that for the price of an ordinary nickel-plated kettle you can sell your customers an "Oakville" Aluminium Teakettle which has so many points of superiority that to show one means to sell it.

Make up a trial order from the pieces shown on this page. Your order will be given special attention, so that you can be getting the profits without delay.

Ask us to send you also price list and catalogue of our complete line.

Do it to-day, for your customers know that

OAKVILLE PURE ALUMINIUM WARE "WILL OUTWEAR ANY WARE."

Ideas that sold the goods

No. 5 of a Series of Prize Stories by Men Behind the Counter

There is a mighty good selling idea in the story that follows, one worthy of adoption by every wide-awake Eveready dealer anxious to increase his present sale of DAYLO'S and Eveready Tungsten Batteries. And the author, Mr. Otto A. Lanz, of the house of Fred Lanz, Monroe, Wis., knows when to play his best card to win.

One of our customers dropped into the store and asked to look at an oil lantern. He wanted a lantern, he said, that would not leak after a month or two of service. He further stated that he desired an oil lantern because he could hang it on a peg in his cellar and could carry it with him to his garage or barn.

I showed him our best and heaviest lantern. He seemed to be satisfied, but asked a question about the fount, which he feared would leak after short usage.

I asked him why he did not use something better and suggested that he try an Eveready house lamp. I passed one over to him and asked him to examine it and try lighting it himself.

I emphasized that the price of this particular lamp was little when he considered the hundreds of handy ways in which it could be used.

He said he knew of other people who often had trouble with a similar light, but not of this brand. This gave me the opportunity to emphasize the long, efficient service of the Eveready Tungsten Battery and Mazda Lamp.

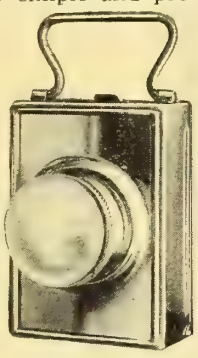
My customer took a new tack, pointing to the fact that the light was quite small and saying that he doubted whether it would be as durable as an oil lantern.

I was able to satisfy him on this point, however, by showing him how well constructed Eveready is, and I followed up my argument by showing him in how many ways he could use this particular type; he could hang it anywhere his lantern hung or stand it anywhere and it would never leak, blow out or cause fire. It was safe, I told him, even in company with high explosives and it could be put in a traveling bag or pocket, or used about the house.

He said he believed more people would use Evereadys if they were so handy. I showed him the guarantee on the battery and then played my trump card. I drew from the display case our list of all of our customers who use Eveready lights, to which is appended the number of the particular light which they have purchased. Every time a customer wants a battery, we refer to this list, and if he hasn't his light with him, it tells us the size of battery he requires. This list frequently influences a sale because by means of it we are able to point to names of people using Evereadys in the customer's own neighborhood.

I wound up my solicitation by telling him that Eveready products are made perfectly simple and pronounced simply perfect. They are carefully tested, thoroughly tried out and heartily approved.

My customer asked me for a price discount, but I explained to him that the Eveready people were selling a product thoroughly guaranteed and made of better materials by experienced workmen. He took a last look at the list of our Eveready customers and the sale was then easily made.



Eveready DAYLO No. 4706 —the ideal portable light for use around the house, garage, barn, etc.

SOREN BROS.
549 King St., West, TORONTO

Sell "Clean Sweeps" instead of unsanitary oil mops

Through the daily papers we are telling Canadian women of the advantages in using "Clean Sweep" Brooms. These same women are coming to a realization of the fact that oil mops are unclean and unsanitary because the dirt is not really removed, but is accumulated on the oily head and then rubbed over the floor. Here then is your opportunity to capitalize on our advertising and at the same time supply the women of your locality with what they are looking for—a broom that will remove every particle of dirt from the floor without raising any dust.

The "Clean Sweep" is especially adapted to particular work on carpets, linoleums, hardwood floors, etc. Sizes 10, 12, 14-inch. Buffed Blocks. Slanted Polished Handles.

For ordinary work about the House, or for Warehouse, Factory, Mill, Stable or Garage use there is the "Durable," a well-made Floor Broom, that will outlast several Corn Brooms. Size 10-inch. Buffed Blocks. Waxed Handles.

Get prices on these.

"Door Bell Out of Order"

How many signs or notes of this kind do you find on the front doors of your town?

And when you find out, what do you usually discover to be the trouble?

In nine out of ten cases, yes, ninety-nine out of every hundred, the cause is poor batteries—batteries whose surprisingly short life leads the householder to think the system is at fault.

It takes experience, hard-earned experience to build a No. 6 battery which will stand the test. It requires years of study, exhaustive experimenting and most discouraging effort to finally produce a battery whose life is worth while.

This is where the **"Master" Battery** comes in. The "Master" is the result of a lifetime study.

Its second name is "Service."

The "Master," with its absolute uniformity of energy, has the **safety cap** which prevents deterioration on your shelves. The battery is full strength when made in the factory and remains so for long periods, even in the face of deteriorating conditions, such as a moist atmosphere.

With housecleaning and general renovating time here you should put new energy into all the electric door bells of your town. Show the "Master" Battery in your window and showcases with other household lines.

Every "Master" sale means a satisfied patron, means more and better business.

HOUSEHOLD GOODS SECTION

The Benjamin PUBLICITY SERVICE

For some years a mighty wave of sales effort has expended itself in popularizing electrical household appliances—and thousands of these current-consuming devices have been placed in the hands of the Canadian people.

Homes are usually equipped with just the number of sockets required for light, and no more.

The appliances you have sold are idle—unused—to a large extent simply from the fact that there is no convenient place to attach them.

Unused appliances are producing no revenue—are a barrier to the sales of more appliances. Therefore, it is imperative that more outlets be furnished as easily, simply, cheaply as possible. Inventive genius has found that easy way in the

Benjamin Two-Way Plug

Spread the gospel of extra outlets—encourage the greater use of electricity in every household.

The Benjamin Company is continuing its advertising work in connection with the Two-Way Plug, through the use of space in newspapers with a distribution covering the entire Dominion.

This advertising is compelling a consumer demand for the Two-Way Plug which is steadily increasing, and which directs this consumer demand into the supply store.

To obtain for the men in the industry the greatest possible benefit from this general advertising, the Benjamin Company has provided material for local use of such a nature that it will "tie up" with the national publicity. This consists of:

Newspaper Advertising	Sends customers to your store.
Window or Counter Displays	Act as "silent salesmen" working for you without cost.
Folders	These will be printed with your own name and address.
Poster Stamps	Attractive designs and colors. These add interest to your letter forms, etc.
Electrotypes	Suitable for local papers. Space is reserved for the dealer's name, and any of the cuts shown, with the name patched in, ready for printer's use, will be sent free of charge to those in the industry who will use them.

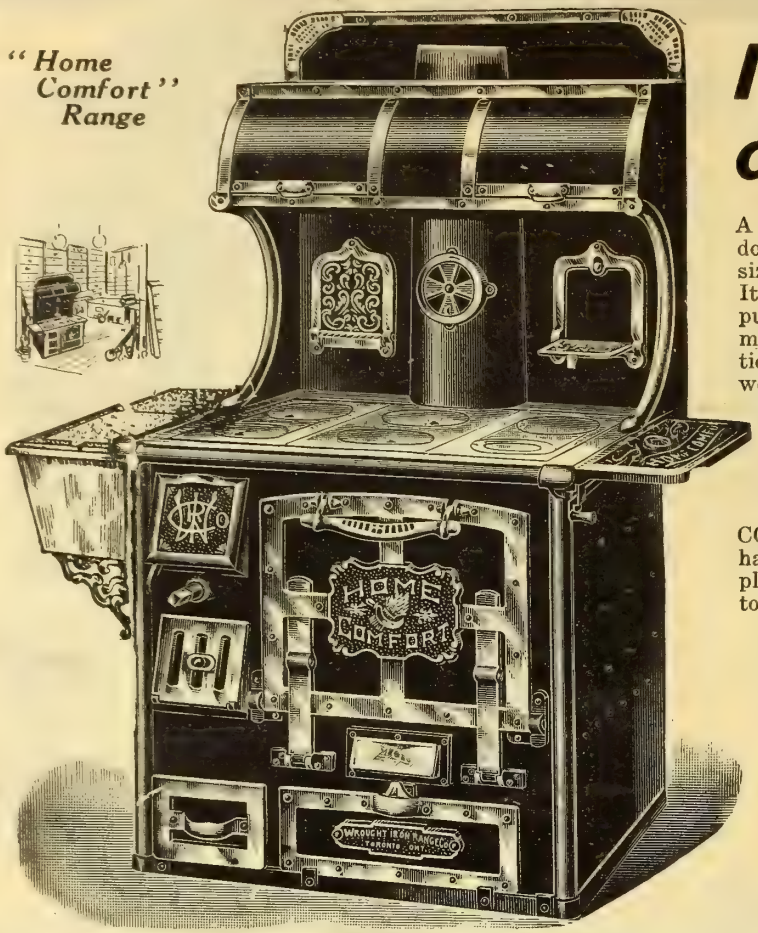
HOUSEHOLD GOODS SECTION

"Home Comfort" Range



It's Wise to Sell a Single Model

A dealer acting as agent for the "HOME COMFORT" doesn't have to keep a big stock. We make only one size and one style. This simplifies matters a whole lot. It used to be, and still is, the custom for the dealer to put forward on his floor the simplest and cheapest model of a range, and to sell his customers this particular range. Then having made the sale, the dealer would proceed to induce the customer to buy extras. For this purpose, the more expensive models kept in the rear would be used for the purpose of demonstration.

Experience has taught a good many dealers that it is wiser to sell but one model, a model like the "HOME COMFORT." It saves time and money—dealers do not have to carry a large stock. This single model plan pleases the customer, too, and makes it safe and easy to make a choice.

We have made the "HOME COMFORT" the most easily sold range on the market. Write for agency proposition. It's a good one.

Wrought Iron Range Co. of Canada, Limited

Office: 151 King St. West TORONTO, ONT. Factory: 22 Orillia St.

"White"

MOP WRINGERS

EASE OF OPERATION, THEIR GREAT UTILITY AND THEIR SUBSTANTIAL CONSTRUCTION, COMBINED WITH THEIR PRICE, MAKES THE WHITE MOP WRINGER A RAPID SELLER.

Made of malleable iron and the best of hard woods — Maple or Birch. Fits any kind of pail and wrings the mop thoroughly.

It has more than one use —often used for fruit and vegetable presses and works perfectly. The advent of the White Mop Wringer proved a boon to the housewife—it sells itself and is a good profit-maker.

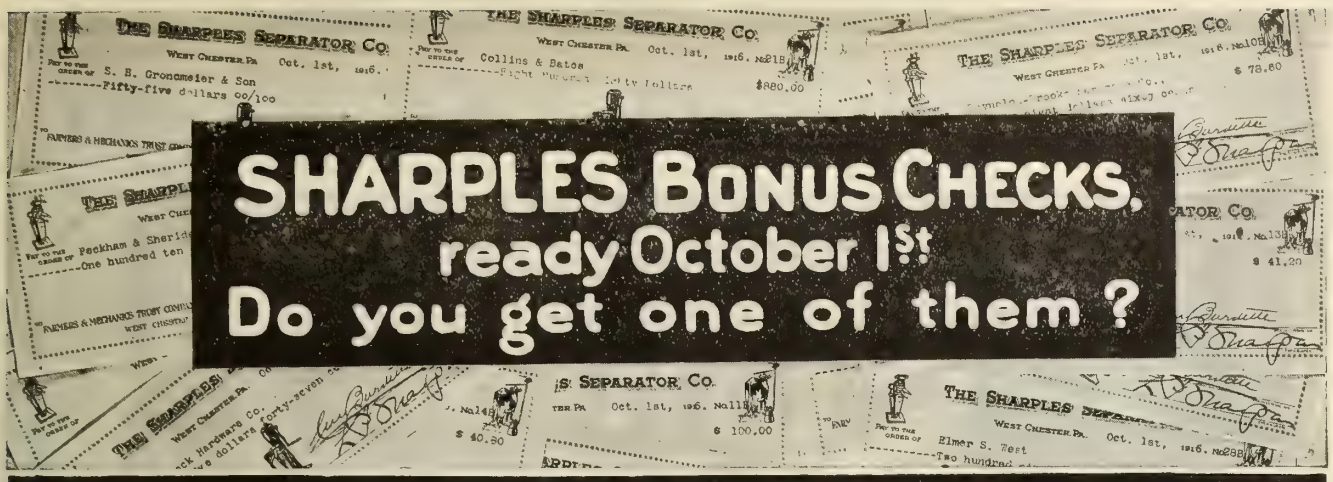
Walter Woods & Co.
HAMILTON and WINNIPEG

Wooden Ware Willow Ware Brushes



We will shortly mail all Sharples dealers who have sold five or more Suction-feed Separators, or ten or more Milker units, a bonus check. This bonus is in addition to the regular contract discount and will range from about $15 to over $1000. Last year the largest bonus check was $880, paid to Collins & Bates, Adams, N.Y. Last year we sent out over $50,000 worth of bonus checks. This year we will distribute nearly $100,000 in bonuses.

SHARPLES
SUCTION-FEED
CREAM SEPARATOR

The reason is that Sharples machines are easier to sell than other makes. The Sharples Suction-feed Separator will skim absolutely clean, whether turned fast or slow, regular or irregular. All other separators lose a lot of fat if turned slow or irregular. The Suction-feed, therefore, will save a lot of butter fat that all other makes lose, and, as butter fat has never before in American history commanded so high a price, the necessity for the Sharples Separator and the opportunities for its sale are apparent. There are thousands of prospects for a Sharples machine who would not be interested in any other makes.

SHARPLES MILKER

—is the fastest-milking Milker built. Repeated official tests have shown this to be true. It is most durable and least likely to cause trouble, and is the only milker with an individual adjustment, so that each cow can be milked individually.

Therefore, the dealer with the Sharples line is in a different position from dealers with other lines. He has an exclusive proposition and one offering greater possibilities.

We want good, live substantial dealers, who can handle large exclusive territories; hence, our offering the bonus for quantity sales.

We want to keep our dealers so far apart that all of them can make a big profit and build a permanent business with our line.

Our separator contract for 1918 is the most co-operative and liberal that we know of, and our Milker agreement offers wonderful opportunities for those in position to sell Sharples Milkers.

If interested in making more money and building a permanent and profitable business, write us and we will be glad to give you some facts and figures and go into detail.

Pure and Durable Iron

Nails from the old Fairbanks House at Dedham, Mass.—in service 275 years. Analysis shows 99.841% Pure Iron—very low contents of Sulphur, Carbon, Copper and Manganese.

At the meeting of the Canadian Railway Club at Montreal, in December, 1915, Mr. W. E. Ramsay, Construction Engineer of the Canadian Pacific Railway, stated, during a discussion of durability of iron and steel,—

"I have in my hand a piece of band iron which I presume is 12 gauge, and which was used in the construction of a flume in Ontario in 1861. It was removed in 1913, and you can see by examination that the detrioration has been uniform both on the exposed portion of the band and the side that was next to the wooden flume. This piece of iron was exposed to the atmosphere for over fifty years, and while the deterioration is not very great, this iron shows a purity equal to any iron manufactured in the world to-day.

"I further believe that the care taken in making the basic materials used fifty years ago is the reason for the durability of this iron. Fifty-three years exposed on both sides and no paint! The analysis is 99.87% pure iron against impurities."

Armco (American Ingot) Iron is guaranteed never to contain more than 16/100 of one per cent. of impurities. The average actual iron content of that produced in 1916 was 99.88 per cent. In physical evenness it is actually superior to the fine old metal of our grandfathers' times. It is The Iron That's Made to Last. Send for a Copy of "Defeating Rust—The Story of Armco Iron."

AMERICAN ARMCO IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

MONTREAL TORONTO WINNIPEG

WANTED — RELIABLE, ENERGETIC hardware clerk, 8 to 12 years' experience. Capable of taking charge. Apply, stating salary and giving full particulars, to Box 170, Hardware and Metal, Toronto.

The firm who inserted the above advertisement in HARDWARE AND METAL showed good judgment.

Naturally, replies would only come from clerks who were in the habit of reading HARDWARE AND METAL—and every hardware merchant realizes that a clerk who reads HARDWARE AND METAL is the kind of clerk he wants, because he will be thoroughly informed on market conditions, new selling plans and the best methods of window display and advertising. The above advertisement brought in 23 replies. It cost only 67 cents.

USE THE WANT AD. PAGE.

If interested, tear out this page and keep with letters to be answered.

Get the Beaver Board Story from a Dealer You Know Personally

If not in your own city, in some neighboring town there is an enthusiastic Beaver Board dealer—a man you know personally—a successful merchant whose word is as good as gold.

Get the Beaver Board Story from him—We'll give you his name.

Then you can ask him any questions you like. You can find out how his trade has increased from year to year, and how his profits have climbed up in proportion. He'll tell you how the uses of Beaver Board have multiplied, how the old wallboard objections have been overcome, how Beaver Board is now surface sealed and sized by the *Sealtite* process to prevent warping or bulging.

He'll tell you a lot of other good things about Beaver Board that will come better from him than they would from us. It's an interesting story and a profitable one for the merchant who acts quickly.

Some one in your town will sell Beaver Board. Why not get this profit yourself?

Write us for the names of dealers you know.

Stanley Works

Products are made-to-order

THERE is nothing quite so satisfactory as to make for yourself whatever you want, exactly the way you know you want it. That is the way THE STANLEY WORKS products are made.

The steel used in STANLEY products is manufactured by THE STANLEY WORKS in its own steel mills. THE STANLEY Steel Plant is one of the best equipped Cold Rolling Steel Mills in the United States.

Depending upon the use to which it is to be put, there is considerable difference in the composition of the steel from which the great variety of STANLEY products are made. A STANLEY plated butt is manufactured from one kind of steel; a STANLEY japanned barrel bolt from another.

Tireless experimenting and seventy-three years of experience has shown THE STANLEY WORKS just what kind of steel is best for each and every item it produces. Having once found what kind is best, it is made to order by skillful workmen in THE STANLEY WORKS' own steel mills.

STANLEY products are superior because the material from which they are made is scientifically prescribed in each case, and then carefully manufactured by THE STANLEY WORKS itself to meet the requirements of your trade.

Next time you order shelf or builders' hardware be sure to specify STANLEY products by name and number. If you have not a copy of THE STANLEY WORKS catalog write for it to-day.

Demonstrations Bring Crowds

Possibilities in House Furnishings—Interior Display—Co-operation in Securing and Pushing Demonstrations Effective—Traffic Blocked—Retailer Helps by Consistent Advertising and Smart Store Display—Knowing Your Goods Most Important.

WHY is it when house furnishings are mentioned that a great many retailers pass over this important branch of their business with the thought, the line is too small, sales are limited, why should I bother when other things bigger are pressing?

House Furnishings an Extensive Line

What are the other things that are bigger—look at your house furnishings line and see what it comprises—tinware, enamelware, stoves, ranges, and heaters, washing machines, clothes wringers, refrigerators, crockery—in fact, the articles are too numerous to mention. Are you giving these goods proper space in your store—do you give them window displays—do you advertise them in your local paper—are you taking advantage of manufacturers' offers for special displays?

Arrangement of Store Space

Let us deal with space these lines occupy in your store. We have often dealt with the proper showing of stoves and ranges, so it is unnecessary for us to elaborate at this writing. However, we might repeat on this point—keep the stoves polished—do not use them as display counters for other goods—give them space in a special room apart from the rest of the store, if possible. This enables you or your clerks to concentrate on your prospects without outside influences to attract your attention or theirs.

Washing machines and clothes wringers, which also take up considerable space, should be kept clean and ready for operation, so that the prospective purchaser may see just how the machine works.

With enamelware and tinware various methods are employed in the successful display of the many items, and it might be well for all merchants to change the arrangement of these goods from time to time. Most merchants use the shelving which is supplemented by counters, and this arrangement is decidedly effective.

Manufacturers Plus Retailers Give Demonstrations

There is, however, one point we wish to bring out, and owing to its successful

Interior view of Alex Ballantyne store of Brantford. A house furnishing display that will produce sales.

use by many merchants, feel that it can be enlarged upon. In an interview with Mr. Alex. Ballantyne of Brantford, the importance of utilizing all manufacturers selling helps was brought out, and as these are supplemented by actual demonstrations, the value of this feature is two-fold.

There are many manufacturers who will gladly co-operate with you along these lines, and that the returns are exceptional is Mr. Ballantyne's experience.

Co-operation with the producer, by means of advertising, interior and window display, and enthusiastic following up after the demonstration is actually over, is bound to bring results, and merchants who have followed out this plan, are enthusiastic as to the results brought about by demonstrations of this kind.

Practically every line of merchandise sold in a hardware store may be featured in this way.

Mr. Ballantyne goes on to say: "A series of events can be arranged, covering, say, every Saturday for a period of about six weeks, and embracing each week one of the lines featured by your store. One week it can be stoves and ranges, another it might be washing machines, the next special paints or a kalsomine preparation and so on. Any manufacturer who has a product worth while that will easily lend itself to such a demonstration, will be found willing to co-operate if he is following along the most progressive lines."

Crowds Hold Up Traffic

Mr. Ballantyne then went on to state that he had worked this very successfully this Spring, when a number of demonstrations had been held in succeeding weeks and had attracted great attention. Saturday being Brantford's market day, was the day always chosen and the crowds that gathered in front of the windows when one or two in particular of the lines were being featured, threatened to stop the traffic.. "I am thinking particularly," said Mr. Ballantyne, "of a demonstration given by a firm that is putting a kalsomining product on the market. The man they sent knew his job, and did really wonderful work in the window by means of air brush, stencil, etc, and that the public were surprised and delighted by the effects gained was evidenced by increased sales from that time up to the present."

Mr. Ballantyne believes that these events should be advertised in advance and every help should be given the manufacturer to make the money expended of benefit to both of the parties involved. "Never," he says, "has the manufacturer been as willing as he is to-day to help the retailer to sell his goods, after they are on his shelves."

Retailer Must Push the Thing Along

When demonstrations of any one line are held in his store, Mr. Ballantyne cooperates by advertising and making special displays, and it is, of course, hardly necessary to instruct the sales force to talk these goods on that day, as the customer is likely already discussing them when he enters the store.

As has been said before, this one merchant enthusiastically believes that this method of publicity has more direct drawing power than all others, and believes that those manufacturers who are neglecting to thus back up their other lines of advertising have a big lesson to learn.

Store Display Carefully Arranged

The view of Mr. Ballantyne's store as reproduced on the preceding page, clearly demonstrates how carefully arranged are his displays of all lines. Down the centre of the store are tables on which the many small items in tinware, galvanized ware, etc., constantly in demand, are conveniently shown.

The arrangement of the store throughout is excellent, and it will be seen how prominence is given to counter displays and attractive hangers from manufacturers. These hangers establish a connecting link between the national advertising conducted by many manufacturers and your store, and for this reason should be given necessary prominence.

Paints Should Not Be Overlooked

The Paint Department of the average retail store is undoubtedly complete in itself, but might it not to some extent, at least, class with your house furnishings trade? There are inside and outside house paints, varnish stains, varnishes, furniture paint and enamel, all belonging to the house, and as such should be borne in mind when calls for other house furnishing goods are made. Study of the paint situation is absolutely necessary to the successful sale of these lines. There are so many lines of paint —so many uses for which they are adapted that the retailer must really specialize to secure the best results.

Mr. Ballantyne brings out this point most convincingly in giving one of his experiences on selling paint. He says: "I have made a special study of all the qualities, covering ability, weather resisting properties, etc., of the line of paint that I feature here. The other day a man called and questioned me about paint, and on hearing my price started to leave the store. I had, however, the facts and figures before me. I knew the paint I was selling and what it could do. I also knew the line he was contemplating purchasing. A few minutes talk, clinched by actual facts and figures that could not be gainsaid, and I had convinced my customer that mine were the cheaper goods to buy, and the sale was made."

A man who had not made such a thorough study of the matter as Mr. Ballantyne had, would certainly have lost that sale, as paint is only paint to a vast number of people, and the price is the only feature they naturally consider until they are thoroughly convinced by clear reasoning and undoubted facts that there are paints and paints, and that there is as much difference between a good paint and a poor one as there is between sand and clay loam.

There, are, then, many features to the house furnishing line in your store, and there are many ways of promoting increased interest in the sales force and your prospective customers. Most certainly, an actual demonstration of the goods is effective—start now and arrange for at least one demonstration before Christmas. Its success will be a sufficient stimulant to your planning several for next year.

Look over this department, see if it has been given sufficient prominence in your sales programme—careful nursing will make this department the biggest in your store.

Prosperity in Canada's Grain Crop

Field Crops Harvested This Year Valued at Over Billion Dollars—Financiers Optimistic Over Business Outlook—Wholesalers Report Increases—Agriculture Big Factor in Future Development.

BUSINESS conditions in Canada are due for a period of greater prosperity than they have been experiencing of late. This statement, based on the reports of the Canadian grain crop harvested this year, is confirmed by financial men throughout the country. From farmers and from millers come glowing reports of the vastness and richness of the crop of the Canadian West. Not only does it exceed in proportion the largest crops in the past, but its quality surpasses the best of other years, as is evidenced by the larger returns of flour being secured from the grain. At prevailing prices Canada's wheat crop this year is estimated to be worth $550,000,000, while the total crop of all grains is over one billion dollars.

The value of the Western crop this year far exceeds anything in the past, and already its effect is apparent in the increasing prosperity of the western farmer.

Thomas Findley, President and General Manager of the Massey-Harris Company, has just returned from a visit to the West, and has brought back optimistic reports. He states that with such a large crop and high prices the western farmer will reach a standing in regard to financial matters which would not have been thought possible a few years ago. Evidence of this is found in the manner in which the West has been exploited this year by automobile agents. To-day the western farmer is the man with the money, and he will undoubtedly be found in the majority among the subscribers to Canada's new war loan which is to be floated very soon. From now on he will be a man of means, and the outlook is that he will

(Continued on page 65.)

Ads That Interest Householders

Change of Weather Offers Special Opportunities For Advertising Seasonable Goods—Harvest, Preserving, Hunting and Dark Weather Requirements Emphasized Now—Ads Should "Produce Sales."

THE advertising of specially seasonable lines for Fall weather is the outstanding feature of recent hardware retail advertising. At this time of year the demand for goods undergoes a big change in character and merchants should bear this in mind when arranging publicity matter. Careful attention should be given to the preparing of advertising matter at any time, even though a little special care is urged at this time of year in order that the maximum results may be secured from the outlay for advertising.

Some merchants hold the theory that advertising is more or less of a fair weather expense. When times are good and there is plenty of money on hand, they devote a little of it to advertising. Others seem to think that it is simply their duty to keep the local paper alive, and they buy space accordingly. Both theories are wrong.

At such times as these the merchant should use greater care than ever with his advertisements. Just as it is imperative for him to watch the leaks, so should he be careful that he gets full value out of his ads. He can do this by advertising carefully, by seeing to it that his advertisements contain something THAT WILL PRODUCE SALES. Now more than ever his advertisements must be timely, must be to the point, and must be specific. The ads should be specialized. Up-to-the-minute items should be picked out and pushed hard. Describe them. Quote prices. Make your ads mean something. Be careful of your advertising expenditure, but boost harder through your regular accepted mediums than ever before.

Change of Seasons Offers Special Opportunities

The change of seasons is at hand, offering another unique opportunity for the merchant to avail himself of a big natural factor in securing big results from his advertising. The change of climatic conditions brings with it a new demand, and it is, therefore, at such times as these that advertising should be pushed.

A glance over a considerable portion of the retail hardware advertising being done in Canada to-day reveals the fact that while many merchants apparently realize the advantages to be secured by seasonable advertising, yet there are many who do not, and who are therefore not securing the maximum returns from their expenditure. Apart from the seasonable character of advertisements there is also the matter of knowing how to appeal to readers, and this feature has been grossly overlooked in the preparation of much of the weak advertising matter which is seen in the newspapers of Canada to-day.

For the purpose of indicating to hardware dealers throughout the country what is meant by seasonable advertising, and by directing an appeal which will bring results through all publicity matter, a number of advertisements will be printed from time to time and descriptive matter published in connection with other ads worthy of comment. It is not designed to go into any theoretical details of various types of advertisements, but merely to emphasize in a general way the advantage which certain merchants are establishing over others by use of seasonable and catchy advertising matter.

Distinctly Seasonable Goods

There are many distinct seasons of the year which should be borne in mind by advertisers. At this particular time the demand for summer goods has given way to that of Fall and Winter goods. That is speaking in a general sense. Going more into detail, it is evident that the demand for warm weather goods such as certain lines of sporting goods, campers' supplies, etc., is giving way to that of harvest and threshers' supplies. Preserving time is here; stoves, furnaces and heaters are in seasonable demand; the dark nights are here bringing a demand for electric and gas lamps, lanterns and flashlights; the hunting season has opened in some localities and in others will open within a few weeks. It is not quite time for skates, sleighs and other sporting goods lines characteristic of winter, but there are four dis-

Three examples of seasonable advertising matter which recently appeared for hardware dealers in Canadian newspapers. Each represents a distinctively seasonable line according to the characteristics of the local community and contains some appeal to interested customers. A point of contact is established in each instance with the interest of certain buyers in the district reached by the newspaper. Seasonable advertising will always prove a big factor in producing sales and establishing a more efficient basis for publicity work.

tinctly seasonable lines of goods as named above which can be pushed vigorously in advertising matter at the present time.

There are many other lines of goods in the hardware trade which are not characteristic of any one season of the year. Such lines as kitchenware, builders' supplies, shelf hardware in general, and automobile accessories, are lines which can stand being advertised periodically throughout the year, though the demand naturally is heavier in certain months.

Reprinted herewith are three advertisements which convey a general idea of what is meant by seasonable advertising. There are no outstanding marks of brilliance about the advertising, but being to the point and being seasonable, increases its value tenfold whether it is theoretically correct or otherwise.

Appeal to Sporting Community

On the left is shown an advertisement by the Morton Hardware Company of Vegreville, Alta., which appeals to the sporting community interested in hunting. This sport was in full swing at the time the ad was published. Its somewhat original style of appealing to the huntsman in much his own language is another strong point of the ad. The catchy heading says: "Aren't you tired of Borrowing the Other Fellow's Gun? If you are not, then let us whisper something to you: 'He is.' Own your own things, then you won't spoil all the fun of the outing in fearing you'll break the gun or whatever you have borrowed."

The Morton ad is seasonable, catchy and carries an appeal direct to the person interested in hunting. With these three characteristics of good advertising, it is only logical to expect that results would be obtained.

Dark Evenings of Winter Season

In the centre is an ad of the Gravenhurst Hardware Company of Gravenhurst, Ont., which is equally seasonable, though representing an altogether different line from the Morton advertisement. Seasonable advertising is representative of the characteristics of the community, and therefore may differ widely even in contiguous sections of the country. In this case the ad constitutes a reminder of the near approach of early dark evenings with the coming of Fall weather. For this reason an ad is entirely devoted to lanterns and lantern globes. Some other hardware firms are advertising flashlights for the dark winter evenings. It is a seasonable line and being a real requirement chiefly in the rural districts, it only requires a good strong advertisement to act as a sufficient reminder to bring in much business from the community.

The Preserving Season

On the right is a distinctively seasonable ad, representing one of the lines already dealt with. Preserving time brings a demand for certain lines of goods carried in the hardware stock, and is therefore worth special attention during this season. In addition to glass jars for the actual preserving, the demand is for kitchen utensils for the purpose, and may in many cases even extend to stoves and heaters. The ad reproduced herewith in connection with the preserving season is by J. G. Hayes, Dryden, Ont., and emphasizes the sale of preserving kettles, granite and tinware, ranges and heaters.

Details of some other timely advertising appearing for hardware firms in various parts of Canada is given herewith. This is along the same line as the information which has been appearing in HARDWARE AND METAL for several weeks past under the heading of "What Hardwaremen Are Doing." This information concerning the class of advertising appearing throughout the country should be advantageous to the merchant in selecting seasonable lines, and making the required appeal to produce results.

Lamps and Flashlights for Dark Weather

Electric lamps and flashlights were emphasized in recent advertising by R. Chestnut & Sons, Ltd., and James S. Neill & Sons, Ltd., of Fredericton, N. B. "Genuine——Electric Lamps, new goods just received," is the heading under which electric lamps of 15, 25, 40, 60 and 100 watt type were featured by R. Chestnut & Sons, Ltd. Nitrogen lamps in all sizes also received mention by this firm.

"Prepare for the coming long winter evenings by getting a Flashlight," says an ad of J. S. Neill & Sons, Ltd. Continuing, the ad says in part: "There is no lamp that can compare for convenience and reliability with the flashlight."

Both the above lines are seasonable and are being strongly emphasized on account of the weather conditions which are now prevailing.

Shooting Supplies for Hunters

Making use of the duck hunting season as a timely subject for advertising, W. R. Phillips of Havelock, Ont., recently published an ad containing details of shells, powder, guns, primers, wads, etc. The ad consisted of an announcement that the duck hunting season commenced on a certain date. "Guns sold and rented by the day," was a statement contained in the ad, which by its tone served to encourage sportsmen to enjoy duck hunting and to "secure supplies at Phillips' store while the stock was at its best."

The foregoing details of what some hardware merchants are doing in the matter of advertising, with special emphasis directed to the matter of pushing seasonable lines and of using some unique way of drawing attention, should be of help in aiding merchants to formulate strong advertising matter. In subsequent issues special lines will be dealt with, and the strong points of the most effective advertising of those lines will be emphasized.

MEETING OF WHOLESALERS

With a splendid attendance including representative men in the trade from Toronto, Hamilton, London, Ottawa, Collingwood and Quebec, the Canadian Wholesale Hardware Association entered upon the annual convention this week in the Windsor Hotel Montreal. The proceedings as opened by President Dowling, and carried on during meetings at which men prominent in the trade gave important addresses, were characterized by great optimism, and the strongest note apparent during the Wednesday meetings was the general feeling amongst all speakers that the period of high prices and rapid alterations of values in hardware stock is likely to be soon at an end if the end is not already here. Steadiness of markets ahead and less frenzied fluctuation would seem to be the expectation of all the good authorities, and the fact that the manufacturers present as well as wholesalers were of similar opinion and able to assure the wholesale trade of their hearty co-operation to the desired end was favorably commented upon.

GROWTH OF SHIPBUILDING TRADE

It is gratifying to note that Canadian manufacturers are making a success of their shipbuilding operations—it being estimated from recent investigations that at least one hundred and fifty million dollars is now being spent in ship construction in Canada. Thirty-five steel and thirty wooden steamers are under construction, in addition to a countless number of sailing vessels and smaller craft.

Six big steel steamers are being constructed at Montreal. Each is of 7,000 tons—there is another of 5,000 tons. Four wooden steamers ranging from 1,500 to 2,000 tons are nearing completion at the Isle d'Orleans. Three 3,000-ton steel steamers are being built at New Glasgow, N.S. Sheet Harbor, N.S., and Shelburne, N.S., will have a couple of wooden boats ready soon. Four oil tankers, in addition to an 8,000 ton steel vessel are being rushed along at Collingwood. Toronto recently launched four vessels and has half a dozen more to come, two of which will be of 5,000 tons each, and the others a little lighter. The Orleans is one of the ships under construction in Toronto for the French Government. Port Arthur is turning out five 3,400 ton steel steamers and two 8,000 tons steamers are building at the Pacific coast.

The shipbuilding yards are being employed full time and have war orders which will keep them busy for several months. Ways and means of utilizing to the full Canadian resources and possibilities with respect to an accelerated shipbuilding programme will be reviewed during the visit of Lord Reading and Lord Northcliffe during the week. The United States is permitting the exportation of steel plates, recognizing that shipbuilding is a war purpose.

Now Time to Study Business Insurance

Take Time by the Forelock in These Days of Unusually Profitable Conditions.

By Henry Johnson, Jr.

RIGHT now I want to induce you to give serious consideration to the question of Business Insurance.

What is business insurance? At the risk of having you turn the page without reading further, I'll tell you: It is **saving money and putting it away where it will accumulate.**

Now, you'll miss it if you do not read further—take my word for it. So let's get the outline first and tell the why afterwards.

The scheme is to provde for business expenses only, as a starter. Determine what you must keep each month with which to pay your rent, help, heat, light, etc. Then settle on a certain minimum sum which you will take out and put away **before any profits are figured, before you take out any "spending money," before you pay your bills!** Get that last: BEFORE YOU PAY YOUR BILLS.

Begin small. Take as little as $5 per month for a breathing, if you do not feel sure you can take more. But make it $10 or $25, or more if possible; and remember that this system is going to make a lot of things possible for you that hitherto have been in the "Can't-be-done" class.

Never Reduce—Never Quit—Never Withdraw

The idea is that the beginning must be modest because the most fundamental point is that money once saved must not be used again—except as I shall indicate later on—and, though you will gradually increase the monthly savings, you must live up to the new schedules whenever you make the sum larger. For the keystone drops out the minute you permit yourself to backslide.

Whatever the sum fixed upon, take it out of the safe first thing on the first business day of each month and deposit it in a separate savings account. So entirely separate must it be from the rest of your funds, that it is well to use a separate bank for this account. Never mind the interest now—let it be 3%, 3½% — the present point is to accumulate it. **And every cent of interest earned must be redeposited to accumulate with the capital.**

And note this: It's no matter whether your bills are paid or not. Pay no attention to any other obligation on that first morning of the month. Do nothing, think of nothing, keep your mind free and clear of all other things until this particular money is drawn out and put away.

The benefits are almost beyond computation. Here are a few:

First, there is the accumulation itself, which grows wonderfuly. Just how wonderfully may be sensed from the fact that as little as $25 per month thus put away at an average of 6% compound interest will yield just about $30,000 in 30 years—a comfortable competence for the merchant 30 years old to look forward to when he's sixty. In other words, **the saving of $9,000 during those years, at $25 each month, will produce $30,000—$21,000 of it earned for you by somebody else!**

Second, you are kept scratching for funds. You return to your store and every bill you have stares you in the face. The effect is surprisingly sobering. It makes you think seriously and figure closely on every purchase you make. You invest neither in merchandise nor in "improvements" of dubious value or utility. Better have the money in a business-insurance fund than tied up in a lot of fancy fixings which often are merely in the way.

Become Brisk, Insistent Collector

Third, you become a keener collector. You are actually more sincerely in need of funds and therefore more convincing—because you do need the money.

Fourth, you have a constantly growing sense of security, of power, of **independence,** because your bulwark of financial fortification is growing higher and more substantial every month.

Fifth, you feel that you are working for yourself. You are making tangible progress. You are gathering real money. You are absorbing the most vital lesson that can get lodgement in any man's consciousness; that the one way to make real money is to take money out of your business steadily.

AND THIS CAN BE DONE BY EVERY BUSINESS MAN NO MATTER HOW HE IS SITUATED, NO MATTER HOW SMALL HIS BUSINESS, NO MATTER HOW MODEST THE SUM ACCUMULATION MAY BE. IT IS THE DUTY OF EVERY BUSINESS MAN TO DO THIS.

Benefits Summarized

To summarize the benefits, we have:

1.—The money safely put away.

2.—We buy more conservatively.

3.—We become more effective collectors.

4.—We have SECURITY — Business Insurance.

5.—Working now for ourselves we acquire **Independence.**

And there are any number of collateral advantages. Ask your jobbers. Ask your banker. Take note of the tone of enhanced respect with which each will listen the minute you suggest what you have in mind.

Why, bless your old heart! Financial independence, competence, everything worth working for lie in this direction and only in this direction when all is said and done.

The Next Step

Suppose, now, that you have piled up $100, $200, $300. On the first interest day, draw out what may be needed to buy solid bonds. The first you buy should be the solidest—war loan bonds are ideal at this moment.

Because those are the soundest, safest security that can be found anywhere. Buy 'em. Put them into your safety deposit box. Then the bank can "bust" and most other things go to thunder—your money will be secure.

Next, accumulation should go into bonds of second line convertibility. Such will yield 4½% to 5%. Buy those until you have, say, $2,000 to $10,000, depending on your own circumstances. (You will be able to take care of yourself after you have bought a few bonds with the advice of your banker.)

Third, buy bonds of narrow market, but sound. These will bear 5½% to 6%. In some cases bonds bearing even 7% can be bought safely—only be sure of the house from whom you buy.

Then follow small mortgages, which in the west pay 7% and even more; and seasoned stocks which have long record of solid earnings.

In this way your savings eventually will earn you an average of 6%—and that is enough to try for in most cases.

"Can't Spare the Money!"

"But I need all my capital in my growing business," says the business man. "It keeps me scratching to meet my daily needs."

That is precisely why YOU need this plan more than some others. The man who skates on thin ice needs to have a life-line handy. When operating on a narrow margin, one most needs a little surplus on which to draw in case of real necessity.

So this Busines Insurance is VITAL to you — that is just why it is called Business Insurance.

For the money is not lost. It is your business to think of it as put away where you cannot get it. But as a fact, the money is there in the bank or invested in securities so sound that they can be hypothecated without a moment's notice in any bank.

If real, pressing need hits you—if illness or misfortune visits you—take your securities to the bank and borrow against them. Then work like a beaver to get them free again!

Compare, if you like, that kind of assets with two or three cars of flour, for example, bought far in advance of need. You can dispose of that flour—how By taking a heavy loss. But the bonds—why you do not need even to dispose of them!

All times are the right times to begin this system. But right now is the RIGHTEST time that has come for many a long year. For these are days of liberal profits. See that you conserve a lot of yours in Business Insurance. **And if you start, you will be safe—you will never be without Business Insurance again.**

Ford Accessory Show at Chicago

Over Fifty Thousand Owners, Dealers and Jobbers Attended Big Exposition in Chicago Coliseum—Unbounded Interest in Endless Lines of Accessory Booths —Big Boost to Accessory Department of Hardware Stores.

By A. H. Byrne, Chicago representative of Hardware and Metal.

EVIDENCE of the rapid growth and development of the automobile accessory business in America is to be found on every hand in these days when the automobile is at the height of popularity both as a medium for pleasure and as an economic necessity. The First Annual Exposition of Ford Accessories, held last week at the Coliseum in Chicago, Ill., provided further proof to demonstrate effectively the extent to which this trade has extended. This exposition was confined to accessories for the Ford automobile only, and unbounded interest was concentrated upon the exhibition during the week of September 22 to 29. During the week over fifty thousand owners, dealers and jobbers attended the exposition. The show was declared unanimously to be a huge success and it will be enlarged upon in succeeding years.

Such a demonstration of interest and enthusiasm on the part of dealers and jobbers in accessories for one type of automobile indicates the extent of the field open to hardware merchants in Canada, and the possibilities available by handling accessories for this car and for other makes which are becoming more popular every day.

Canadian Dealers Interested

Canadian hardware dealers and jobbers who had the opportunity of attending the Exposition were agreed that it was intensively interesting, since it was almost entirely devoted to the display of accessories specially suitable for Ford cars. Those dealers who were unable to attend will be interested in a description of the Show and by the illustration showing a general view of the exhibits. An examination of the list of exhibitors and the lines shown will give some idea of the scope of the Exposition.

Quite a number of Canadian dealers and jobbers were present notwithstanding the fact that the Show was not advertised to the Canadian trade. Undoubtedly the management next year will take steps to bring more Canadian owners and dealers.

Over one hundred manufacturers took advantage of the opportunity to demonstrate their various devices to the thousands of Ford owners, dealers and jobbers who attended during the week. As the Show progressed it gained in popularity and it can be predicted that next year's Exhibition will attract a larger number than were on hand this year.

All of the exhibitors present, it is said, arranged for booths at next year's Exhibition which will be held from September 23 to 28 inclusive.

The management of the Show consisted of H. V. Buelow, General Manager, J. E. Duffield, President. Charles Johnson, Vice-President; H. S. Irving, Secretary. B. L. Gray, Treasurer; E. L. Sharon, Chairman of Exhibit and Space Committee, and H. G. Paro, Chairman of Membership Committee.

The Exhibits

The exhibits were varied and comprised every conceivable accessory adaptable for use on the Ford automobile. One exhibit which attracted much attention was one where tires were made up complete. Truck making attachments were the centre of much interest, and Ford locks, of which there were eight different varieties on exhibition, proved very interesting. It is said that over 30,000 Ford cars were stolen in the United States alone, last year, hence the interest in lock attachments. Wire wheel exhibits were also much in evidence as were carburetors, mechanical and electrical starter exhibits.

Among other lines shown and worthy of special mention were: demountable wheels, spark plugs, vulcanizers, garage grease guns, emergency axle stubs, bumpers, gas generators, auto mirrors, coupe tops, headlight buttons, windshield cleaners, piston rings, power valve spring compressors, shock absorbers, auxiliary transmissions, reboring tools, cork inserts, fan belts, radiator covers, lighting systems, tire pumps, motometers, tire valves, primers, safety brakes, motor bench stands, mechanical belts, tire testers, spotlights, headlights, winter tops, differentials, safety spark sets, tire preservers, tire fillers, de-

Partial view of Ford Motor Accessories Show held in the Coliseum, Chicago, last week.

mountable wheel outfits, lens, rectifiers, superheaters, foot accelerators, speedometers, switches, low oil annunciators, extensions, roller bearings, carbon removers, safety cranks, lubricating oils, lubricators, skid chains, radiators, cylinder heads, headlight controls, ventilators, wheel clocks, dash clocks, windshield attachments, dimming devices, windshield cleaners, clutch controls, robe locks, tire holders, ball thrusts, flag holders, electric plants for garages, etc.

Big Sale of Accessories

The management stated that sales at The Show exceeded half a million dollars, but the main consideration from a financial standpoint will be the business that will result during the coming season.

During the Show there arrived from Los Angeles a driver who made the run of 2,762 miles in 126 hours in a Ford touring car. The average for the trip was announced as 21 8-10 miles per hour and the consumption of gasoline averaged 22 miles per gallon. The longest daily run was 490 miles in sixteen hours. During the last lap in the trip the rear axle of the car was dragging in the mud most of the way, but notwithstanding, the run of 492 miles was completed, it is said, in twenty hours. The car was equipped with a cramp auxiliary, and during the last and most trying part of the trip a Non-Stall Differential was added to the equipment.

It is doubtful if such a wide field for trade ever existed in any other line as is offered by the auto' accessory business to-day and the automobile industry in Canada is growing until it is now known as the leading "peace time industry." The outlook is for still greater growth in future years and the demand for accessories will increase simultaneously. Such concentration of interest in this line as attended the Chicago Exposition is of great value in furthering the interests of the hardware dealers who handle accessories and as this Exposition is but the first attempt of its kind in America, it is evident that there are big possibilities involved.

Names of some of the exhibitors at the Exposition are as follows:—

Chicago Pneumatic Tool Co., 1515 S. Michigan Avenue, Chicago, low oil annunciator; Hayes-Diefenderfer Co., 1872 Broadway, New York, N.Y., Haydee extensions; Maremont Mfg. Co., 916 Wabash Ave., Chicago, Camelford extension; Ehman Tire & Rubber Co., La Salle and 27th Streets, Chicago, tires; R. H. Hassler, Inc., Indianapolis, shock absorbers; W. H. Howell Co., Geneva, Ill., tire pumps; Ahlberg Bearing Co., 2636 Michigan Ave., Chicago, roller bearings; World Tire Corporation, 1508 Michigan Ave., Chicago, tires; Kerosene Burning Carburetor Co., 2105 Michigan Ave., Chicago; Security Auto Lock Co., 853 N. Francisco Ave., Chicago, auto locks; Osgood Lens & Supply Co., 2007 Michigan Ave., Chicago, lens; National Equipment Co., 125 Racine Ave. S., Chicago, carburetor; Illinois Gear Works, 105 W. Monroe St., Chicago, radiators; Automobile Accessories Co., Baltimore, Md., piston rings; Jensen-Kohkert Mfg. Co., St. Charles, Ill., lever pumps; Shurnuff Mfg. Co., St. Louis, Mo., running board fender support; Stahl Rectifier Co., 1401 W. Jackson, Chicago, rectifiers; Naber Stopshock Co., 544 Washington Blvd., Chicago, springs; Metal Specialties Mfg. Co., 338 N. Kedzie Ave., Chicago, specialties; Consolidated Utilities Corporation, 221 W. Lake St., Chicago, rectifier; Outlook Co., 5518 Euclid Ave., Cleveland, windshield cleaner; Standley Skid Chain Co., Boone, Iowa, non-skid truck chain; American Steel Supply Syndicate, Penobscot Bldg., Detroit, clutch starter; Elka Mfg. Co., San Francisco, Cal., auto specialties; G. F. Dean, 501 Monadnock Bldg., Chicago, tops; Romort Mfg. Co., Seattle, specialties; Indiana Lamp Co., Connersville, Ind., spotlights; Hastings Mfg. Co., Hastings, Mich., lighting system; Milwaukee Auto Engine & Supply Co., Milwaukee, Wis., bumpers; A. A. Lawder & Sons, 69th and State Sts., Chicago, tops; Pitter Fan Co., Elgin, Ill., fans; Newstarter Mfg. Co., 1901 Western Ave., Chicago, starter; Reliance Co., 428 W. 38th St., Chicago, lock; Bailey Non-Stall Differential Corporation, 1125 Michigan Ave., Chicago, non-skid non-stall differential; Western Wire Products Co., St. Louis, Mo., spring cotters; Safety Spark Set Co., Elkhorn, Wis., safety spark set; Jefferson Electric Mfg. Co., 426 S. Green St., Chicago; E. Parradee, 7457 Coles Ave., Chicago, tire preserve; Simplicity Wheel Co., Grand Rapids, Mich., demountable wheels; Defender Auto Lock Co., Free Press Bldg., Detroit, Mich., lock; Western Carburetor Co., Alma, Mich., carburetor; Lanham Starter Co., Davenport, Iowa, starter; A. S. Brock Rubber Co., 57 Broad St., Boston, Mass., lighting specialties; Prestotilt Attachment Co., Muncie, Ind., tilting attachment; Willard Co., South Bend, Ind., superheater; Roof Auto Specialty Co., Anderson, Ind., cylinder heads; New York Coil Co., 338 Pearl St., New York, battery ignition; Ewald Novelty Works, Oakfield, Wis., foot accelerator; Standard Thermometer Co., 65 Shirley St., Boston, speedometers; Dim Auto Lite Switch Co., Monroe, Mich., dim auto lite switch; Continental Piston Ring Co., Memphis, Tenn., piston rings; Detroit Motor Lock Co., Detroit, lock; Walker Keyless Lock Co., 2015 S. Michigan Ave., auto lock; Wire Wheel Corporation Co. of America, Buffalo, N.H., wire wheels; Advance Automobile Accessories Corporation, 56 E. Randolph St., Chicago, cork inserts, fan belts; Perry Auto Lock Co., 1238 S. Michigan St., Chicago, locks; H. M. Metal Radiator Cover Mfg. Co., Indianapolis, Ind.; Simplex Manufacturing Co., Anderson, Ind., starter; Consolidated Utilities Corporation, 219 W. Lake St., Chicago, electric plants for garages; K. D. Lamp Co., Cincinnati, Ohio, tail lamp assembly; S. C. Johnson & Son, Racine, Wis., prepared wax; E. H. Sprague Mfg. Co., 20th and Harney Sts., Omaha, Neb., safety crank; Dayton Wire Wheel Co., Dayton, Ohio, wire wheels; Atlas Specialty Mfg. Co., 18 E. 24th St., Chicago, radiator covers; National Wire Wheel Works, Inc., Geneva, N.Y., wire wheels; White Star Refining Co., Detroit, Mich., lubricating oil; Heinzelman Bros. Carriage Co., Belleville, Ill., coupe tops; A. B. Mfg. Co., 516 Michigan Ave., Detroit, headlight button; Tri Continental Corporation, Sidway Bldg., Buffalo, N.Y., windshield cleaner; Keys Piston Ring Co., St. Louis, Mo.; Bear Mfg. Co., Rock Island, Ill., starter; U. & J. Carburetor Co., 329 Plymouth Court, Chicago, carburetor; Warnola Mfg. Co., 73 Worster St., New York, power valve spring compressor; Safetyford Starter Co., 836 Grand Ave., Los Angeles, Cal.; R. & R. Mfg. Co., Elgin, Ill., shock absorbers; L. & B. Truck Mfg. Co., Los Angeles, Cal., auxiliary transmissions; Taussig Bros. & Deimers, 2924 Grand Ave., Chicago, Ford seven bodies; Heiser Special Tool Co., Kingston, Mo., reboring tools; Warner Lamp Co., Davenport, Io., lighting system; Anthony Co., Long Island City, New York, tire pumps; Moto-Meter Co., 15 Wilbur Ave., Long Island City, New York; D. & D. Company, 20 E. Jackson, Chicago, Fouless spark plugs; Snideman Standard Tire Valve Co., Chicago, tire valves; Maltby Auto Specialty Co., Battle Creek, Mich., standard primer; Hughes Mfg Co., 1806 S. Michigan St., Chicago, safety brake; Carswell Hammond Mfg. Co., Boone, Io., motor bench stands; Mechanical Belt Co., St. Joseph, Miss., mechanical belts; Motax Mfg. Co., Taylorville, Ill., combination stand; Auto Accessory Mfg. & Sales Co., Benton Harbor, Mich., demountable wheels; W. W. Plewes, 1034 First National Bank Bldg., Chicago, spark plug pump; Magnetic Mfg. Co., 1248 Clybourn Ave., Chicago, vulcanizer; Ekern Bros., Flandreau, S.D., grease guns, axle stubs; A. Nelson Mfg. Co., 564 W. Randolph St.; Kales Stamping Co., Detroit, Mich., auto mirrors; Master Starter Mfg. Co., 2201 S. Main St., Los Angeles, Cal., starter; Essenkay Products Co., 324 W. Grand Ave., Chicago, tire filler; J. E. Dempsey Co., Manitowas, Wis., auto headlight control; Mixrite Carburetor Co., Decatur, Ill., carburetor; Eureka Accessories Co., Detroit, Mich., fan belt oil guard; Dearborn Truck Co., 1250 S. Campbell St., Chicago, truck units; Sunderman Corporation, Newburgh, N.Y., vacuum carburetors; Bill Mfg. Co., Laporte, Ind., spark retarder; Hart Bell Co., New York, carbon remover.

The "It Can't Be Done" Man

(From *The American Metal Market.*)

THE "it can't be done" man should be given the cold shoulder. He should be ostracized. In fact, he should be "canned". He should be made into a "can" man. "Can't" is not the word for to-day. Some definitions from Webster: A whine; a pet expression; empty speech implying what is not done; to deceive by false pretenses; to scold.

We have improved somewhat in a century. We reflect comfortably that an American crowd would not jeer today as an American crowd did a century ago over the mishaps of Fulton's boat on its trial trip. The crowd today would hope that it could be done. But we must go farther.

Suppose General Joffre had said at the Marne "It can't be done." Suppose General Pershing should now send word to his commander-in-chief, "It can't be done." Suppose the commander-in-chief should say "it can't be done" and resign. Suppose that we should decide we can't win the war. We are in the war and we must win as fully and as speedily as possible. There must be no "can't," with or without the apostrophe.

A year ago we had the "it can't be done" man about American airplanes. It would take three years, but we are building Liberty motors, as good as any in the world, probably better, and building them fast. We had him about transportation; the railroads were congested and could not move troops. We had him about the 500,000 Germans, not seeing Gerard's 501,000 lamp posts. Those "can't be done" men are gone. There are others who must go.

The trouble with the "can't be done" man is that he does not have vision. He whines and scolds. We had him in steel. Prices could not be fixed. Competition must rule. He did not see that competition between sellers had disappeared. It is competition between buyers, for which there is no economic justification at this time.

The man is dogged. Driven from one line he falls back on his second line, or a third. Steel prices could not be fixed, but they are being fixed. Now he says it won't work. Why, he tried to place an order yesterday at the fixed price and no mill would accept it.

That reminds us of a story. The late Tom L. Johnson ran for Mayor of Cleveland on a municipal ownership of public utilities platform. The morning after he was elected the illiterate started riots on the street cars. The conductors actually tried to collect a nickel apiece, when Tom Johnson had been elected! The main difference between that and this is the degree of illiteracy admitted.

Steel prices are going to be fixed. The work is intricate and complicated, but it is not difficult. The poorest schedule

(Continued on page 78.)

EDITORIAL COMMENT

HOUSEHOLD GOODS

MORE attention is being paid to-day to quick turnovers in the hardware store than at any time in the past. The trade realizes that to make the greatest success in business, quick turnovers are absolutely necessary. The days of the retailer who turned his stock once or twice a year are practically over. The modern merchant wants a quick turnover. Dead stock represents dead dollars. One has only to look around to see what has attributed greatly to the success of many of the world's greatest merchandisers. Take for instance the Woolworth concern with its 1000 stores, doing many millions of dollars' worth of business annually, and yet selling nothing at a cost of over 15c. This concern studies the needs of the public, displays the stocks where the public can see and examine them, and in this way secures huge volumes of business at a comparatively low selling cost.

The same plan can be followed out on a smaller scale, by every retail hardwareman. Every hardware store should have a well-stocked household goods department. Many of our most successful hardware stores have had such departments for years past, and find them highly profitable. The trade of the householder is particularly desirable. Such lines as kitchen equipment and utensils, cleaning appliances, paints, mops, polishes, and dozens of other lines can be stocked at small cost, turned over quickly, and they bear a good margin of profit. There is an ever-increasing demand for household hardware—and most of the lines are all-year-round sellers.

WILL REQUIRE ARMY FOR PAINTING

ONE of the most interesting developments of Lord Northcliffe's visit to Toronto this week where he addressed the Canadian Club on Wednesday, was his reference to after-war labor conditions. In speaking of what labor conditions are likely to be following the war, Lord Northcliffe said:

"I think that wages are going to be high and labor conditions good. All the resources of Great Britain have been mobilized for the war. Why it will take an army of men to paint the houses in London."

Think of it and you will realize the truth there is in the statement. Since August, 1914, painting has been practically nil, and in a city housing over seven millions of people, the amount of this class of work to be done must be enormous.

There is another point which might be brought out in considering after-war problems as applied to the Old Country. That is the strides which will be necessary for the building trades to make, in replacing those parts of London destroyed by air raids. Authentic information places this damage at large figures. Does this mean anything to Canadian manufacturers?

Great Britain will most certainly look to her Dominions and Allies to supply many of her after-war needs. There are great opportunities coming for the aggressive manufacturers. It would look from this angle as though prosperity should be Canada's lot after the war. Are the necessary steps being taken to assure Canada's securing her share of export trade?

PURCHASES ON THE BASIS OF FORMER DAYS

THERE are many voices being raised here and there to point out the dangers that present themselves in the commercial situation in these unsettled times. More and more often we are hearing of world supplies of foods nearing the vanishing point, more and more often is the necessity of conservation being brought before the public attention. Hoarding for possible profit is a dangerous matter now, it is a serious matter too in that every excess of buying, tends to add to the stringency of the situation that has already reached serious proportions.

The National Credit Men's Association of the United States is urging the limiting of purchases within the bounds of former days in the following striking words:

"We say first and emphatically to the credit man, that *every form of gambling in prices, commodities and credits, must be suppressed.* This is no time for the buyer to pile up stocks in the anticipation of higher prices; this is not the period when commodities should be bought out of fear for the future or when unreasonable credits should be granted; there must be just as even a flow of commodities from producer to consumer as human powers can provide; unselfishness must be exercised so that the slightest possible burden shall fall upon everyone related to the commercial and credit system as producer and consumer."

These words may well have the thoughtful consideration of every thinking merchant.

Further Developments in Stee

Scope of Government Control Widened—Business Men Approve Fixing of Prices—Canadian Manufacturers Act—Steel Controller a Possibility — Regulations Governing Priority of War Orders.

THERE has been great interest displayed in the announcement that the U. S. Government had reached an agreement with the steel men fixing prices at which their various products might be sold. More or less confusion has prevailed, but the atmosphere is clearing somewhat as further details are published.

Government to Increase Scope of Fixed Prices

In the original announcement, as given in HARDWARE AND METAL last week, only six products were mentioned, including the three forms of finished steel which the Government will buy most largely. However, latest advices indicate that the War Industries Board is prepared to extend Government control to the entire steel trade, and before the Board completes its work, there will be 150 articles of steel manufactured, it is said, under fixed prices. This will be done, even if Congress fails to pass the Pomerene bill providing for Government control of iron and steel products.

Should the bill become law, the Government will have specific authority to name the maximum price for every article in the iron and steel trade, but if it does not pass, the same plan will be adopted as used in dealing with the other articles. The Government will enter into an agreement with the manufacturers under which they will bind themselves to charge stipulated prices for the 150 products. These prices will apply not only to the U. S. Government supplies, but to the Allies and general public.

The attitude of business men in regard to the fixing of prices has been more or less speculative until a resolution adopted at the recent war convention held in Atlantic City, N.J., conceded the right of the Government to fix prices. A declaration afirming that it is right and proper for the Government to fix prices, and even necessary to do so. on all materials needed to carry on the war as well as those that affect the public interest, was unanimously endorsed. This power of the Government to fix prices, it is claimed will stop all inflation of prices "a condition under which American business has been laboring for some time."

Canadian Manufacturers Act

Action has been taken by Canadian iron and steel manufacturers to avoid serious disturbance which is threatened through American embargo on basic products. The Washington embargo prevents the importation into Canada of pig iron. iron and steel plates, chrome nickel steel, boiler tubes, steel billets, tin plates and other raw materials except under license, granted when it is shown they are necessary for munitions work or other win-the-war purposes.

Canada's difficulties in securing iron and steel materials from across the border are, of course, greater than ever, owing to the increased war order business of the United States. Government supervision, therefore, seems probable to conserve and co-ordinate iron and steel supplies and secure as far as possible a distribution of the limited supplies available over the next six months or so.

Steel Controller a Possibility

The decision of the meeting held in Ottawa was to secure an inventory of immediate Dominion requirements, with a view to making representations to Washington, and also to ascertain the needs for co-operative action along drastic lines.

Manufacturers are being circularized to ascertain in detail local conditions as to immediate manufacturing necessities. When this information is available, a further conference will be held to devise the best ways and means of meeting needs.

It was suggested that a Dominion Controller of Iron and Steel be appointed, whose duties would be analogous to those of the Fuel Controller. This should result in obtaining maximum results from the present situation.

No Change in Prices as Yet

Uncertainty exists in the minds of many as to how these fixed prices will affect staple manufactured lines, but there is no indication that any drop is anticipated. Most contracts now unfilled will be completed on the old basis of high figures and little if any relief is expected before the end of the year.

It is estimated that the U. S. Government and its Allies will require about 7,000,000 tons of steel products during the next twelve months, and it is expected the steel companies will obtain details within the next sixty days.

How the work will be handled is being given consideration by the priorities committee of the War Industries Board, and the first general circular giving instructions as to priority in orders and work for all individuals, firms, associations and corporations engaged in the production of iron and steel and in the manufacture of products thereof has been issued.

Divided Into Three Classes

Under regulations now established, all orders and work are divided into three classes: Class A, comprising "war work; that is to say, orders and work urgently necessary in carrying on the war, such as arms, ammunition, ships, etc., and the materials required in their manufacture"; Class B, comprising orders and work "which, while not primarily designed for the prosecution of the war, yet are of public interest and essential to the national welfare, or otherwise of exceptional importance"; Class C, comprising all orders and work not embraced in Class A or Class B. All orders henceforth will be classed as Class C unless covered by certificates of the priorities committee. No certificates will be issued for Class C orders.

Class A to Take Precedence

Orders and work in Class A will take precedence over those in Class B, and both these classes will be given priority over Class C, irrespective of the date the orders were received. Class A and Class B will in turn be separated into subdivisions to be designed as Class A1, A2, A3, A4, etc., and Class B1, B2, B3, B4, etc., each composed of orders within the class which are regarded respectively as of greater moment and to be given precedence in accordance with its serial number. All materials required in the manufacture of an article or in prosecution of any work will be entitled to take the class of such article or work unless otherwise specified.

For the administration of the regulations, certificates will be issued by the priorities committee upon application, specifying the classification of the order of work. Certificates of a subsidiary nature will be issued upon request for the furnishing of material and articles required in manufacturing the article or prosecuting the work ordered. War orders of the Allies as well as of the United States will be placed in Class A. In the case of those already contracted for, all orders placed prior to the date of the circular by the War or Navy Departments or the Emergency Fleet Corporation of the United States will be classed as sub-division A1 of Class A, unless otherwise ordered. Orders already placed by the Allies for war materials will be classed as subdivision A2 of Class A, unless otherwise ordered.

Making of Applications

Applications for Class A certificates will be made to the committee by the contracting officer or agency of the United States, or, in the case of the Allies, by their authorized agent. Applications for subsidiary certificates covering materials, articles, or work required in the manufacture of Class A products will be made by the contractor to whom the principal Class A certificate has been addressed.

Applications for Class B certificates will be made to the committee by the individual, firm or corporation for the expedition of whose contract the priority order is desired; while subsidiary certificates for materials will, as in the case of Class A certificates be applied for by the contractor to whom the principal Class B certificate has been addressed.

Are You Helping Your Town?

The Fall Fair—Its Advertising Possibilities—Is the Automobile to Eliminate the Prize Horse?—Benefits to be Derived From a Local Organization to Boost the Fair, Your Own Town and Surrounding Community.

HAVEN'T you all indicated a willingness at times to do something for your own town? Isn't it real good business apart from any sentiment which may creep in? Look back then over the months of this year already gone and see if you have taken the interest in the welfare of your town, of your community, which was its due.

Great Opportunity Presented by the Fall Fair

Perhaps your greatest opportunity throughout the year is presented by the Fall Fair. Are you devoting some of your time to making this a success, or are you too engrossed in other business?

On this page is a representative picture of a scene at a town Fall Fair. It is these people whom you serve by taking an interest in this event of the year, and though some of them may be visitors, it is well for them to know that you were a factor in the development of such a movement.

Consistent Work Results in Best Returns

There are men in each town who work twelve months a year to make the Fall Fair a success—who are continually working out ideas to please the people, both exhibitors and visitors, but how much easier, how much bigger could these events be made were every merchant to put even a little pressure behind the wheel and push steadily for the full year.

How to Further the Fair Interests and Advertise Your Store

Primarily the Fall Fair was an exhibition of stock, home cooking, garden produce, grain, etc., with a band and horse races to furnish amusement. These ideas, however, have been enlarged, and while forming the basis of most Fairs, there is not one merchant but who can arrange for a display of some line of his merchandise—the hardware men can show stoves and ranges, the dry goods man, his ready-to-wear garments; the grocery man, jams or breakfast foods. There are manufacturers in all lines of business who stand ready to assist retailers make a successful display of their goods.

The Automobile Again to the Fore

But there is one line we might mention particularly as being of deep interest to the hardware men generally, and that is the growth of the automobile trade.

At one county fair, held a couple of weeks ago, there were 800 automobiles passed the gates before two o'clock in the afternoon. This seems almost incredible, but being true, indicates how prosperity has extended to the farmer, and in what way he is spending his money. A display of automobile accessories, then at the Fall Fair would no longer appeal to the favored few, but to the many auto owners whose number is constantly increasing.

Will Growth of Automobile Eliminate the Horse?

The motor driven vehicle has gained wonderfully in popularity the past few years, and in many instances is replacing the horse for delivery and even for some classes of farm work. However, it is unlikely that any one favoring or using motor-driven vehicles wishes to see the horse eliminated. This being true, it is the duty of the officers of Fair Associations to maintain the interest in stock breeding necessary to upholding this important branch of our national life. Increased prize lists and advertising will keep interest centred in the horse, and by no means should this be allowed to subside.

Wherein the Fall Fair is a Good Thing for Your Own Town

There is no question as to the advantages to a town and the surrounding country in the successful development of the Fall Fair. It requires months of careful study and hard work to attain satisfactory results, but it will benefit all to such an extent that the efforts are worth while.

The greatest benefit to be derived from the Fall Fair as we can see it, is the home town spirit which is promoted—the happy family attitude developed—and herein lies the merchant's opportunity to hold his trade, to keep the dollars at home. Advertise your home town—

Scene at Oakville, Ont., Fall Fair

THE CLERKS' DEPARTMENT

A BUSINESS MAN CONTROLLING THE NAVY

Sir Eric Geddes, Who Knew Neither Politics Nor War, But is Now a Power in Great Britain.

THE appointment of Sir Eric Geddes to take charge at the British Admiralty was a triumph for the few who have demanded that the administration of national and Imperial matters be in the hands of capable administrators. Sir Eric Geddes is a business man, an ex-lumberman, a railroad man, an executive of energy and initiative. He knows nothing of politics—and cares less. But he has become a wonderfully efficient cabinet minister. He knew nothing of war; but to-day he is devising war-like methods and plans that are Napoleonic in their thoroughness. Geddes is the personification of the new Britain—John Bull awakened to action, throwing precedent to the winds and judging "muddling" to be the cardinal sin.

Judson C. Welliver contributes a splendid sketch of Geddes to Munsey's Magazine, written moreover before Geddes reached the Admiralty, which reads in part as follows:

Immediately after the battle of Arras, last April, the Germans undertook a heavy counter-attack in order to recover the valuable ground from which they had been driven; but their effort was smothered by a tremendous volume of British artillery fire.

Now, according to all Germany's learned professors of the art of war, there was no excuse for a heavy artillery fire at such a place and time. The big guns had no right to be there, right on the heels of the storming parties. The Berlin Tageblatt voiced the German disgust. It felt that something distinctly unsportsmanlike was involved in the reprehensible haste of the British in getting their artillery up so soon that there was no chance for a counter-attack, such as the rules prescribed in such cases. There was justification for complaint, and the Tageblatt ponderously announced its displeasure.

Utterly lost to shame, the British commander, Field-Marshal Sir Douglas Haig, had the effrontery to mention in despatches that the transport arrangements which had made the thing possible were wonderfully efficient, and entitled to a great share of the credit. He went so far as to name the culprit responsible for this violation of Germanic ideas of military propriety. The man he named was Admiral-General Sir Eric Geddes. For, though never a sailor, Geddes is an admiral; and though only an amateur soldier, he is a major-general.

At forty-two years, this man has come to stand forth as probably the foremost master of the art of co-ordinating industry and transport with military organization; and that, it may be observed, is the vital factor in making and winning modern war.

Sir Eric has out-maneuvered the Germans in their chosen field. He beat the Krupps at manufacturing munitions, and having manufactured them he built military railroads to take them to the firing-line faster than the Germans could use the tracks they had already built.

The Labors of a Modern Hercules.

The time will come when men will speak of Geddes's accomplishment in 1916 as they have for a century discussed Napoleon's revelation of military genius in the Italian campaign of 1796. There may be tasks in grand organization too big and complex for him to handle, but none has been found as yet; and lately the British government has managed to set a new and harder labor of Hercules for him to tackle about every six months.

Before I attempted to chase the genius of this man into its lair and study it under the microscope and the X-rays, I had already heard rumors about him. At a great British port where ships were being loaded and unloaded in record-breaking time by a new system, I listened to the explanations, and asked how it happened.

"Geddes!" whispered the harbor-master.

A glimpse through the marvels of war-time ship-building methods on the Clyde again inspired the inquiry as to the responsible personality.

"Geddes!" was the explanation.

Later, in a great foundry, I saw hundreds of women manipulating huge cranes that tossed half-ton ingots of white-hot steel. Other women worked the hydraulic presses that forged the fifteen-inch shell-casings; yet others handled the giant lathes that bored and shaped and measured these castings into finished shells. This was truly industrial revolution—the men firing the great weapons at the front, the women making the guns and ammunition at home. How did it happen?

"Geddes!" they told me.

Half a county full of workshops, warehouses, strange industrial establishments, fed by a hundred miles of railway, employing thirty thousand people in turning out just one necessary of war—that stirred the same inquiry, and brought the same brief answer:

"Geddes!"

Newspapers told about a corps of expert Canadian lumbermen being turned loose in the woods of England and Scotland, to rip out almost overnight the timber that must be supplied in France, and for import of which no ships were available. Whose idea was that?

"Eric Geddes's," they told me. "You know, he was a lumberman in America."

Over the cables came the amazing yarn that the Parliament at Ottawa had presented eight hundred miles of frontier railroad to the empire. It would be ripped up and sent, rails, ties, cars, locomotives—lock, stock, and barrel—to France, and laid down again for war work.

"Who on earth," I began, "ever—"

"Oh, Geddes, of course!" I was informed. "He learned railroading in the United States, you know, and practised it in England."

Over in France, in an area which the Boche had evacuated two days earlier, I saw multitudes of experts building new highways faster than the Germans had been able to blow them up; putting in bridges; laying down field railways; paralleling them with water mains; all so fast that the van of construction was never safe from the fire of the retreating Huns.

"Who ever organized—"

The question was never finished.

"General Geddes, of course," they assured me. "He invented that sort of railroad when he was in India."

A little while later the government took over all the ship-building in Great Britain—naval and merchant, iron, steel, and wood, steam and sailing, big and little. It would have a Czar in charge of the whole business in order to systematize, cheapen, hasten.

"But for such a task as that who's big enough to—"

"Admiral Geddes," I was assured.

Manifestly, it was necessary to know more about this man Geddes, who seemed to be bossing the whole show. If it wasn't his war, it seemed likely that at least he would soon hold most of the stock.

His Personality and Methods.

Having caught up with Sir Eric, one feels real satisfaction in discovering a big man who quite looks the part. Six feet plus of typical John Bull, smooth-shaven, square-jawed, sinewy, sat behind a big desk in the big marble building labeled "Controller of the Admiralty." He didn't seem very busy; those who know his ways of working say that, like so many other men who do big things and lots of them, he never does seem very busy. His desk was immaculately neat and orderly. If business ever gets ahead of him, he manages to keep the evidence of it somewhere else than on that broad-topped desk.

"You understand," he explains, a bit apologetically, "I don't do very much, anyhow; the staff really attends to everything for me."

The staff! There's the real point. He is one of those men who know always where to find exactly the right man for the business in hand, and how to get him to undertake it.

"The way he does it," explained one of his lieutenants and devoted admirers,

"is quite simple. He finds his man, puts him at work, and then stands between him and trouble. Nobody gets a chance to interfere, to muss things, to invent difficulties. Heaven help the person that tries to make worry for one of Geddes's force who's doing his job to Geddes's satisfaction. The place wouldn't be big enough to hold the row that would happen. Everybody knows that now, and so the row doesn't happen. The staff look upon him as their big brother. Of course, if he discovers that he has got hold of a slacker, the emergency exit is opened instantaneously, there's a quiet emergence, and somebody else goes on that job. That's all. But Geddes doesn't need to resort to such methods often, for he isn't given to mistakes."

Housing a New Official Department.

There's a story entirely characteristic of the man, telling how he went to work when he was put in charge of a big division of munitions production. There wasn't a convenient place for an office; everything was crowded and uncomfortable. Sir Eric looked around, and his eye lighted on a big structure just across the street. He went over.

"I'll take this building," he said. "Just what I need!"

"But you can't possibly have it," he was assured.

"But I must," he insisted; and now there are three thousand of his staff in it.

Later, when they gave him another big business to handle, the same trouble arose. There is never office room enough for government business in London, these times. A new building for the department of agriculture and fisheries was in leisurely process of construction. It would serve, Geddes decided.

"When can I move into this building?" he demanded of the proper official.

"We're working day and night to finish it. Can't possibly be done under three to six months," he was assured.

"Well, this is Thursday. On Monday I must have an office in that building, with telephone, desk, and rug."

Between Thursday and Monday a man climbed up on a scaffold, chiseled off the words "Agriculture and Fisheries," chiseled in the words "Armament Buildings"—and on Monday morning Sir Eric walked into his office, approved the rug, sat down at the desk, and started business.

That's the sort of man he is, all over. The things that he finds necessary have an almost uncanny way of happening. The impossible is not recognized in any department where he rules.

A Scotsman Born in India.

Geddes, as may have been suspected from his name, is a Scotsman, but he was born in India, in the shadow of the Taj at Agra. He is the son of a famous Scottish engineer who had gone out to India to build bridges. At an early age he came back to Britain and received his education at Merchiston Castle School, Edinburgh. Perhaps there is something significant in the fact that this institution was founded by the great mathematician Napier, the inventor of logarithms. Napier was something of a hand at cutting off mathematical corners, and his pupil Geddes is a wonder at lopping off industrial corners and clipping knots of red tape.

Geddes's First War Work.

He rose to the deputy-general managership of the North Eastern, which position he occupied when the great war broke out in 1914. The national emergency brought new opportunities for Geddes. Somebody told the government that he was the right man to do big things, and to do them in a hurry; so he was made chairman of the central committee of railway authorities for the mobilization of the northern district.

He had never been in politics, and his military experience was limited to holding a commission as honorary colonel in the Royal Engineers; but he was tremendously interested in the war as soon as it became England's real business. He proceeded to raise a pioneer battalion from among the employees of the North Eastern system. It is now a battalion of the Northumberland Fusileers, and has earned high repute for its splendid work at the front in France. He was its first honorary commander, and devoted much effort to its proper equipment and training.

But it was not fated that Geddes was to lead his men in France. Before they were ready to be sent to the trenches, he was summoned to the ministry of munitions. Mr. Lloyd George, the minister, had heard of this strenuous young Scot who could always find time to do a few more things and do them all well; and, although they had never met before, the man who is now premier, at their first interview, offered Geddes an important post in the munitions department.

This was the first really big war task to which he was called. He was put in general charge of the production of small arms, machine guns, heavy guns, scientific instruments, and optical glasses, and undertook supervision of the Woolwich Arsenal, the biggest in the kingdom.

At this stage of organizing war industry the problem of "circulation" in the munitions business was one of the most difficult. Circulation means what would be called in America "assembling." For example, the production of a shell involves first the making and then the putting together of a great number of parts. The empty shell is made in one place, the fuses in another, the detonator in another, the gaine in yet another; then there is an exploder, a cartridge, a propeller, an ignition device, and so on to the end.

Speeding up Shell-Production.

Remembering that there are some fifty components of a finished shell, every one of which must be perfect, all of which must be assembled in precisely the right way if the shell is going to explode at precisely the right time, and that all these fifty components are made in different places, it becomes reasonably apparent that the business of getting them together in the right quantities, in perfect condition, and at the right time, is something of an operation. That was the business that Geddes had to organize for the munitions department.

The big cast steel shell-casing is the most obvious part. Everybody knows about that, but at a certain point in the construction of the shell's mechanism there is required a little disk of a certain kind of cork about the size of a pin's head, and without that cork disk the shell is just as worthless as it would be if the casing had been forgotten. Likewise, there is a strip of a particular kind of cloth, for which it appears that Geddes had to draw upon Italy.

More quickly, they say, than any such huge task had ever been accomplished before, Geddes had perfected and put into smooth working order his whole scheme for assembling and finishing shells. The system was so nearly perfect that nobody has been able to improve on it since. It worked, and still works, precisely like the mechanism of a clock. Every component part arrived just when it was wanted, just at the place where it was wanted, just in the condition in which it was desired. Geddes attended to all that; and that is the reason why the British army in France, during the present year, has had shells to waste, and need not think of conserving them; while the Germans after forty years of laborious preparation, have been compelled to exercise the utmost care lest they should use more shells than can be spared.

Solving Other Industrial Problems.

Right alongside this business of manufacturing and assembling the parts, not only of shells, but of everything else in the way of munitions, Sir Eric confronted another, and in some ways even a more difficult, problem. The army had been steadily draining the skilled labor out of the country, and it was necessary to devise a system for utilizing unskilled labor. It was Geddes who perfected the system that has made it possible for hundreds of thousands of women and girls to be employed in fabricating all kinds of supplies; in making fifteen-inch guns, and the shells they shoot; in manufacturing cordite, building ships, constructing aeroplanes, and all the thousands of processes, no matter how difficult and intricate, involved in munitioning an army.

Just one instance will point the moral of this particular department of Geddes's service in the British government. It was particularly necessary that the best of optical instruments—field glasses, sighting devices, and the like—should be provided for the army. Optical instruments, and particularly the manufacture of optical glass, represented one of the industries that had been practically relinquished to the Germans. For decades almost all that England had used had come from Germany.

Geddes discovered that there was one firm in England which had been persistently attempting, in the face of much discouragement, to compete with the Germans. He sent for its heads, divided the business into departments, and put the right man—Geddes always knows the right man—in charge of each department. Then he gave them plenty of money, and turned them loose to manufacture optical glass and instruments. The result is that to-day Britain has passed Germany in the development of this art. All the optical supplies required by her army and navy are now made at home, and recently it has been possible to turn over some of the surplus to England's allies. That was another Geddes accomplishment.

Geddes's System of Field Transport.

It was realized, soon after the battle of the Marne, that transportation in the field must play a very large part in the war; that the side with the best command of transportation, other things being equal, would have the best chance to win. The British transportation service had never quite produced the results desired; so, of course, Geddes undertook the job.

I saw the Geddes system in operation a few months after he had taken charge of it. To describe it adequately is well-nigh impossible.

Geddes has the genius of knowing just how to make his department best serve the other factors with which it must deal. He understood, for example, that roads must be rebuilt or built anew; not only well, but with unexampled speed, in order that the supplies of a modern army might be moved over them fast enough. He saw that the Germans would always have the advantage in this regard, because their game was henceforward to be a game of slowly retreating. They would always be falling back into a territory gridironed with roads which they had constructed, would always be leaving a devastated region in which every foot of railroad would have been destroyed, every highway blown up, every bridge wrecked.

The problem of pursuing a retreating enemy in such circumstances—of bringing up transports, supplies, huge guns, to say nothing of the troops—was one

(Continued on page 66.)

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

ESSENKAY TIRE FILLER

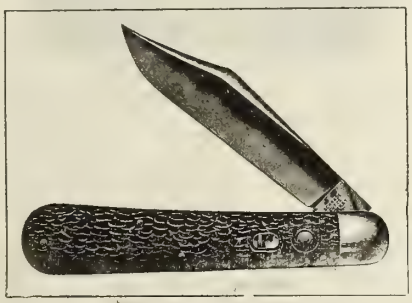
Essenkay Products Company, Grand Ave., at Orleans St., Chicago, Ill., is marketing the Essenkay tire filler, a non-rubber, resilient, durable and "live" composition which is claimed to serve the purposes of air perfectly without displaying any of the "pneumatic draw-

Two-year-old tire casing used with Essenkay

backs" of the ordinary automobile tire inflated with air. With Essenkay it is unnecessary to use inner tubes, and hence it is claimed all tire troubles are overcome. This product is claimed to be a proven substitute for air in tires by test and trial on thousands of pleasure cars and trucks. Essenkay is claimed to ride like air, deliver service, stand up indefinitely, and is not affected by heat, cold, pressure, water, friction, sand, mud, atmosphere or climate. It is claimed to double tire mileage because it keeps tires constantly inflated to the proper point so that every tire will wear to its last shred. This product is said never to go flat and can be transferred to a new casing and used over again. It is claimed that 20,000 miles from a tire filled with Essenkay is not unusual, and at the recent Exposition at Chicago casings which had run from 15,000 to 25,000 miles with Essenkay were on exhibition. The Essenkay filler was subsequently removed to new casings. The tire illustrated herewith ran for two years with Essenkay tire filler instead of air or inner tube. It is claimed to have given no trouble and required no attention during that period. A special 10 days' free trial offer is made by the Essenkay Products Company.

SAFETY PUSH BUTTON KNIFE.

Schrade Cutlery Company, Walden, N.Y., is marketing a new type of pocket knife fitted with a safety push button, which is claimed to insure against the breaking of finger nails and to prevent the opening of the knife while in the pocket. The knife is opened by pushing the button on the knife, as illustrated, and the safety slide locks the button. This knife is claimed to be the most convenient form of pocket knife and a great time saver. It is further claimed that there is no danger of cutting one's fingers in opening and closing the Safety Push Button Knife owing to the fact that the springs are properly proportioned and delicately balanced. The knife is claimed to be safe from accidental opening while being carried because the safety slide securely locks the opening mechanism which cannot operate until the safety slide is pushed out of action and the mechanism released. The highest grade of special cutlery steel is claimed to have been used in the blades of the knife and exceptional care exer-



Safety Push Button Hunting Knife

Safety Push Button Gentleman's Knife

cised in their manufacture. All knives are guaranteed by the Schrade Cutlery Company against defects in material and workmanship. The Company agrees to replace without charge all that do not give satisfaction. The Safety Push Button Knife is claimed to be a perfect gift or souvenir at all times that will be appreciated by everyone. One illustration showes a large one-blade hunting knife with a handle 4⅞ in. long, and the other represents the gentleman's size two blade knife 3½ in. long. These knives are also being manufactured in a medium size between the two shown by the Schrade Cutlery Company.

"SUPERIOR" INSIDE CORNER BEAD

"Superior" Inside Corner Bead, being marketed by the Milwaukee Corrugating Company, 36th Ave. and Burnham St., Milwaukee, Wis., is designed to insure

Metal Corner Bead

correct lines in plastered surfaces where wall meets wall or ceiling. It is claimed to be an artistic improvement much required on the average job of plastering. The Bead is claimed to furnish the ground for the mechanic to work to, thereby necessitating the application of an adequate coat of mortar over the lath and doing away with the common "skinning" of mortar coat, especially from the jambs back to the inner angles of the walls. Furthermore, from its construction it is claimed this Bead in a large degree takes up the strain of building settlement and the warping and shrinking of timbers, thus preventing the unsightly fissures which are commonly seen in the angles of a plastered room. The Bead is also claimed to be the solution of one of the most irritating troubles—the joining of wood lath, metal lath or plaster block partitions on brick or tile walls. By the use of a clip either wing of the Bead may be extended one and one-half inches so as to afford ample nailing room, thus eliminating splintering or clipping. The Bead is made from galvanized, open hearth sheets, and is furnished in 5, 6, 7, 8, 9, 10 and 12 foot lengths. Samples can be obtained from the manufacturers.

PEERLESS TOOL KIT

Corcoran Mfg. Co., Cincinnati, Ohio, are placing on the market Peerless Tool Kit. The Kit is a new Peerless product and is claimed to be very serviceable in addition to being extremely useful. As illustrated, the Kit is 22 inches long, 9 inches wide and 7 inches deep. It is claimed to be useful to automobilists, auto repair men, brick masons, blacksmiths, carpenters, cement workers, engineers, electricians,

(Continued on page 66)

EVENTS IN THE TRADE

BUSINESS CHANGES

Yorkton, Sask.—S. Levine & Co., general store, has dissolved.

Toronto, Ont.—Kehoe & Kehoe, hardware, has changed ownership.

TRADE NOTES

Grand Mere, Que.—O. Nobert, hardware, is offering business for sale.

Damody, Sask.—S. E. Phillips, hardware, has been granted an extension.

Owen Sound, Ont.—Creeper & Griffin, hardware, was recently broken into by burglars and a quantity of small arm ammunition stolen.

FIRE LOSS

Plenty, Sask.—A. W. Fraser, hardware, suffered recent fire loss.

Toronto, Ont.—Moffatt Irving Steel Works, Ltd., suffered recent fire loss.

INDUSTRIAL NOTES

Montreal, Que.—Imperial Broom Company has dissolved.

Toronto, Ont.—Central Iron Works, Limited, has obtained provincial charter.

Winnipeg, Man.—Auto-Lite Gas Co., Ltd., was recently damaged by explosion.

Redcliff, Alta.—Local Rolling Mills has secured additional premises owing to rapidly increasing business.

Walkerville, Ont.—Standard Foundry & Supply Co., Ltd., has obtained provincial charter.

St. Laurent, Que.—Eugene Panneton will construct large factory here, to be allied with Canada Stove Company. The sum of $300,000 will be spent in establishing this important industry and several hundred men will be employed.

MONTREAL NEWS ITEMS

Mr. Lawson of Rice Lewis Bros., Toronto, was a visitor in Montreal this week.

Morris Wheeler, of Sargent & Co., New Haven, Conn., was a visitor in Montreal this week.

E. H. Howson, manager of the Peterboro Lock Manufacturing Co., Peterboro, Ontario, was a business visitor in Montreal for a few days this week.

EXTEND OPERATIONS TO BUFFALO

Canada Foundries and Forgings, Ltd., to Follow Shipbuilding Industry Extensively

The Canada Foundries and Forgings, Ltd., (Jas. Smart Mfg. Co.), of Brockville, are contemplating buying the Delaney Iron and Forge Co. at Buffalo. This move is in line with the company's intention of going into the shipbuilding industry on a large scale, as they will operate their branch at Welland as well as the one at Buffalo.

CANADA'S NEW MINISTER OF PUBLIC WORKS

Mr. C. C. Ballantyne, of the Sherwin-Williams Co., Accepts Portfolio

The appointment of Mr. Charles Colquhoun Ballantyne to the Cabinet, with the portfolio of Minister of Public Works, marks the first step towards an administration composed of members of both political parties.

C. C. BALLANTYNE
whose wide business experience should prove of great assitance to Canada

In view of Mr. Ballantyne's wide business experience, the Government would seem to have made a step in the right direction by securing his services at this time. The unsettled state of the political situation at Ottawa will find some balance in the appointment of big calibre men, and Mr. Ballantyne's list of activities would indicate that he is such.

Apart from his association with the Sherwin-Williams Co. as vice-president and managing director, Mr. Ballantyne is a director of the Canada Cement Co.; director, Canadian Explosives, Ltd.; and a director of the Merchants' Bank. He was born in Colquhoun, Ont., in 1867, celebrating his fiftieth birthday on Aug. 9th last.

His connection with the paint business dates from 1882, and since then his moves have been upward. Mr. Ballantyne has served as president of the Canadian Manufacturers' Association and as a member of the Montreal Board of Harbor Commissioners. He brings with him to the Cabinet a large business knowledge and some experience in public affairs.

DEATH OF BENJ. MOORE

Benjamin Moore, Founder of Benjamin Moore & Co., Ltd., Passes Away

Benjamin Moore, an important figure in the American and Canadian paint trade, died at his home in Mont Clair, N. J., after an illness of two weeks. He was born in County Monaghan, Ireland, in 1855. His father was an officer in the British Army.

The late Mr. Moore came to America at the age of 17—his passage paid—$20 in his pocket—to New York, where he started to work in a paint factory unloading trucks. From this first job he went to packing goods and later grinding paint.

Following his promotion to the store, he went on the road selling paint. His advance was rapid, for at the age of 21 he was the firm's leading salesman. Two years later he started in business with his brother under the name of Moore Bros.

The firm of Benjamin Moore & Co., Ltd,. was founded by Mr. Moore in New York in 1883; the Toronto factory being established in 1906 under the management of his brother, Frederick Moore. Factories have also been established at Chicago, Cleveland and St. Louis.

The late Mr. Moore is survived by his widow and one daughter, Mrs. W. C. Belcher, Mont Clair, N.J., two brothers in New York, one in St. Louis, and one in Toronto, and four sisters.

PERSONAL

D. Cinnamon of Lindsay visited Toronto on business during the week.

Sgt. E. Lewis, former hardware merchant of Toronto, has been appointed License Inspector for Toronto.

James Dandie, hardwareman of Streetsville, Ont., visited the city on Friday of last week.

Joseph Yanch, general merchant of Flinton, Ont., was in the city during the week. Mr. Yanch is putting in a stock of hardware.

J. E. Booth and H. R. West of the Sanderson Pearcy Company, Limited, have returned from a motor trip to New York and Atlantic City.

Among those from Toronto attending the annual meeting of the Wholesale Hardware Dealers' Association in Montreal this week were T. B. Williamson of H. S. Howland Sons & Co.; Mr. Lawson of Rice Lewis & Co.; Messrs. Hardy and Baden of the firm of Jenkins & Hardy; Mr. Funston of the Kennedy Hardware Company.

HARDWARE LETTER BOX

Blacksmith Coal

F. Y. W. Braithwaite, Blind River, Ont. Could you give me the names of a few jobbers in Blacksmith's Coal? The Milne Coal Co., Ltd., 88 King St. E., Toronto; F. A. Fish Coal Co., C.P.R. Bldg., Toronto; The Canadian Supply, 449 Spadina Ave., Toronto.—Ed.

Bishopric Wall Board

Hamilton Bros., Sioux Lookout, Ont.—Will you please advise us of the address of the firm that makes Bishopric Wall Board?

Bishopric Wall Board Co., Ottawa, Can.—Ed.

Joy Range

Reiver Bros. & Co., Ltd., Wellesley, Ont.—Could you tell us the name and address of the manufacturers of the Joy Range?

Canadian Heating and Ventilating Co., Owen Sound, Ont.—Ed.

Riverside Range

Walter Teed, Stonewall, Man.—Could you inform me the name of the manufacturer of the Riverside Range?

Rock Island Stove Co., Rock Island, Ill.—Ed.

REVIVAL OF SHIPBUILDING

How This Condition is Being Met by St. St. John, N.B., Firm—Hardwaremen Always to the Fore.

A striking illustration of the adaptability of an enterprising firm to meet the opportunities offered by changes in trade conditions is found in a window display in the King street store of T. McAvity & Sons, Ltd., St. John. When the revival of the wooden shipbuilding industry at the port of St. John became an accomplished fact, this concern was ready to meet the heavy demands for hardware arising from need for materials for construction, and tools for the workmen. This is a line with which the old-established firm was once well acquainted, but for which, in the passing years, there has been little demand.

Just to emphasize the fact that they were ready to meet the call once more, the window dresser went to work and result is one that cannot fail to impress the most casual passerby.

A water filled tank banked by sandy shores gives the proper atmosphere for a shipbuilding yard and on the shore appears the framework of a ship under construction, and another near completion, but still on the stocks. In the "Harbor" a sailing vessel is afloat, and on the other side appears a vessel in a dry dock to undergo repairs. In the background is a model village of workingmen's homes. Surrounding this striking scene is a generous display of materials and tools required for shipbuilding and repairing.

PROSPERITY IN CANADA'S GRAIN CROP

(Continued from page 52.)

receive even larger returns in years to come. The demand for grain is always increasing and with high prices and plenty of idle land at his disposal, it is only logical to expect that greater untilled areas will be put under cultivation next year and in succeeding seasons.

Every Line of Business Benefits

Mr. Findley went West about the middle of July, and after a brief stay at Winnipeg, started a tour through the grain producing districts—a tour which included many of the chief agencies of the company in Manitoba, Saskatchewan and Alberta. Mr. Findley stated that the prosperity of the western farmer was being reflected in practically every line of business. In regard to agricultural implements, Mr. Findley stated that the difficulty is to meet the demand, a state of affairs which reflects the shortage of labor and costly raw materials in the manufacturing end of the business.

Summing up Canada's total yields as reported from the various Provincial and Federal bureaus, it is found that the value of the field crops this year easily surpasses the billion mark, and that without taking into account the pasture lands, the fruit returns, tobacco, clover seed, hemp and other small and scattered crops. Reckoning values from current prices the following are the figures of Canada's field crops this year: Wheat, $550,000,000; oats, $233,280,000; barley, $58,620,000; rye, $6,059,000; peas, $5,488,000; mixed grains, $16,310,000; beans, $6,336,000; buckwheat, $5,000,000; flax, $14,000,000; corn for huskers, $7,000,000; potatoes, $50,000,000; roots, $16,000,000; hay and clovers, $160,000,000; fodder corn, $10,000,000; sugar beets, $600,000.

This totals $1,138,600,000, which represents the approximate value of Canada's field crop this year. This is the greatest price returns this country has ever seen.

Canada in Forefront of Nations

The supplying of food requirements under the present conditions is the greatest work which can be accomplished by any nation and Canada should therefore be brought to a position in the forefront among the nations of the world. The development of this all important industry will prove a big factor in the after-war adjustment in Canada. This fact was emphasized in the recent report of the special committee of the Senate appointed to inquire into what is being done and can be done to best promote the "agricultural, industrial and trade interests of the country." The report with its nineteen recommendations is practically devoted to different phases of the nation's great fundamental industry.

There is no argument that the present level of prices will be maintained after the end of the war. When war spending stops, there will be a readjustment all along the line. Farmers and stock raisers will have to be content with less profits, but the outlook is that the margin will be sufficient to provide handsome returns to the efficient producer.

Chairman Senator Bique of the Committee, in presenting the report, stated the belief that the readjustment of the country from the conditions attendant upon the frightful expense, destruction of life and waste of property in the war and the temporary channels of industry to which energies are now being directed, would best be found in the development and in the improvement of agriculture.

Agricultural Interests Foremost

The committee makes nineteen recommendations in all, practically the whole of which refer to the development of agricultural interests. There is reference to the necessity of co-operation between the Dominion and the Provinces in handling the public lands, reference also to the importance of the encouragement of mixed farming, practical farm loans, etc., for the increase of agricultural revenue, with clauses referring to the problem of getting the returned soldier on the land and of developing petty industries for the employment of surplus agricultural labor between seasons.

Mr. E. L. Pease, vice-president and managing director of the Royal Bank of Canada, after visiting the West, says that he was agreeably surprised at the bright outlook. He states that in addition to the crop being nearly twice the value to the farmer that last year's crop was, interest charges will be eliminated owing to the fact that the crop will be rushed to the seaboard as result of the fixing of the price.

He states that business in the West is getting brisk, that wholesalers report increases all over and that bank deposits are increasing.

This is indeed a much to be desired state of affairs and the livening up of business conditions throughout the West is certain to be reflected in business prosperity throughout the whole Dominion.

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

Editor HARDWARE AND METAL:

I have just read your article in HARDWARE AND METAL, "Food Controller Gets Part Truth." I want to express my appreciation of it. It is good, and it should be read by every retailer. I am enclosing you a clipping from the Ottawa Citizen.

With kind regards, I remain, yours truly,

E. M. TROWERN,
Secretary,
The Retail Merchants' Association of Canada.

ARE YOU HELPING YOUR TOWN?

(Continued from page 60.)

show the farmer that in as great measure as the town is successful and alive, so enhanced is the value of his farm lands—that much easier is it for him to market his produce.

YOUR OWN TOWN will stand boosting, no matter how prosperous it may appear to be, and it is well to keep before your customers that their own town is deserving of this patronage.

Have the merchants in your town ever met with a view to advertising your own town—as a matter of fact, have the merchants in your own town ever met as a body? Aren't there questions in your mind which you would like to have answered, and to which the grocery man, dry goods man or boot and shoe man could give you a complete answer? An exchange of ideas with the other men of your own town would be a good thing—it might not bring any direct benefit to you, but your experiences might prove helpful to your fellow citizens. This is the spirit of co-operation which should be growing with the retail merchant—it must, if he is to maintain his standing in the community. It could then be extended to the farming section and the success attending teamwork amongst merchants and farmers would be untold.

Will you be the man to get the merchants in your town together—will you start the local organization necessary for the promotion of the home town spirit? It's going to be a big factor in the continued prosperity of your town, in the success of your own business. Don't wait until to-morrow to start the ball rolling, get out to-day—put an ad in the local paper calling a meeting of ALL merchants and see that they all attend. Who will be the first to report on a local organization of this nature? Let us hear from you.

A BUSINESS MAN CONTROLLING THE NAVY.

(Continued from page 62.)

of the greatest ever turned over to a military engineer. Geddes solved it.

I saw the Geddes system at work between Albert and Bapaume immediately after the Germans had evacuated Bapaume last spring. Along the main highway between the two towns—or rather what had once been the main highway—the Germans left nothing but wreckage. There was not a bridge, there was hardly a rod of usable road. Wells had been blown up or poisoned, so that there was no water supply. The country was a vast morass of shell-holes half filled with water, intersected by a complexity of trenches and barbed wire entanglements.

Geddes had everything ready for just this emergency. He had brought countless tons of broken rock all the way from England, stored it exactly where it would be most available, and provided five-ton motor-trucks to move it forward. The trucks were even loaded in anticipation of sudden orders to move. Field railroads of three-foot gage had been built in sections, ready to be laid down. These were stacked just where they would be handy when wanted. Locomotives, built wherever in the world industrial capacity could be found, were ready to handle the supply trains.

Timber had been cut and brought forward for the reconstruction of bridges. Water mains were waiting to be laid down, and pumping plants to be installed and set to work.

The moment the Germans evacuated a strip of territory, this Geddes organization pushed forward, often under the fire of the enemy's artillery. The speed with which it built roads, railways, telephone lines, telegraph lines, water supply systems, was utterly past belief. It represented, of course, the potential result of complete preparation in every detail.

That was why the Germans were not able to retire unmolested and settle down at leisure to hold the so-called Hindenburg line. The Geddes transportation scheme didn't contemplate letting the Germans hold anything unmolested. Before the battle of Arras began, the Geddes engineering organization was rebuilding the freight yards of Arras.

Master of all Military Traffic.

As director of military railways in England, Geddes's business was to handle all railway supplies and transport facilities. Barges for Mesopotamia, for instance, came within the purview of his operations. He straightened out the problems of transport in the East, and introduced and perfected the system of light railways in France. He bought old tracks in various parts of the world, pulled them up, and transported the material to the Somme and the Tigris.

His successes in these operations resulted in his being kicked up-stairs into a still bigger department. He was made director-general of transportation in all theatres of war. Everybody knows now that the perfection of the Allies' transportation system has been the basis of all their successes in France.

The old theory of military operations had been that the rail-heads ought to be kept within twenty miles of the fighting-front. Geddes promptly scrapped that idea, and substituted the theory that the ammunition ought to be there rather ahead of the guns! Somehow or other he actually managed to accomplish just that. The German counter-attack at Arras might very possibly have undone the British victory, but for the fact that before the Kaiser's defeated troops could pull themselves together and bring their reserves into action, the Geddes transportation department had brought up guns, munitions, supplies, everythin' and the German effort was asphyxiated under the hellish fire of heavy and light artillery.

To get ships loaded and unloaded, docks cleared, and warehouses filled and emptied fast enough to keep traffic always moving, was early recognized as one of the great difficulties of war time; so Geddes was sent to organize the traffic of all the ports of Britain and France. In a little while the system doubled their capacity. It was thus that he was able to bring to France such vast quantities of road and railway material. The single detail of moving rock for ballast required a small fleet of carriers plying back and forth across the Channel.

All this time Geddes had been an honorary colonel. That was the only rank he ever held until one day he was gazetted for promotion to the full rank of major-general. He has never been a colonel, never a brigadier. In his capacity as director-general of transportation, he sent a commission to the East, and was getting matters in Egypt and Macedonia straightened out when it was suddenly discovered that a man of precisely his qualifications was needed to act as controller of the navy.

NEW HARDWARE GOODS

(Continued from page 63)

fishermen, glaziers, machinists, painters, paper hangers, etc. The Kit is constructed entirely of steel and is finished in black enamel. It is fitted with a wooden tray divided into compartments for screws, bolts, etc., allowing plenty of room for larger tools below. It is equipped with lock and keys and two

Steel Tool Kit

Wooden tray for screws, bolts, etc.

strong suit case catches, and each kit is packed in an individual corrugated carton for shipment separately by parcel post, freight or express. It is claimed that the price of this indestructible steel kit is lower than any wooden box.

U. S. IRON AND STEEL EXPORTS

A committee of leading iron and steel men, working in connection with the Department of Trade and Commerce, has been appointed to secure information on the effect in Canada of the United States regulations. The difficulty arises chiefly in connection with industries not actually war industries, although related thereto. Iron and steel "destined for actual war purposes" can be secured, but concerns not engaged in the manufacture of war supplies will be unable to secure the articles listed unless the regulations are relaxed.

Iron and steel constitute but one branch of exports which now have to be licensed before leaving the United States, owing to the fact that their conservation is necessary on account of the limited supply and the needs of the United States in its successful prosecution of the war. While the Exports Administrative Board of the U. S. has practically prohibited the export of iron and steel, export licenses may be granted.

(a) When destined for actual war purposes or when they will directly contribute thereto.

(b) In certain unusual cases when such exports will contribute directly to the immediate production of important commodities required by the United States.

(c) And also in certain other cases where the articles may be exported in limited quantities without detriment to the United States.

(d) Further licenses may also be granted for limited quantities of these conserved articles when required for purely medicinal or pharmaceutical purposes.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

INTERESTING developments in hardware markets during the week comprise advances in certain gauges of steel sheets and lower prices in some sections of the Dominion on other gauges of steel sheets. An embargo placed on black sheets, No. 10 gauge and heavier, from the United States to the domestic trade in Canada, has had the effect of sending prices higher in Canada. The determination of the United States Government to expedite shipbuilding has occasioned the conservation of plates of various kinds. In other lines of steel and iron there has been no disposition to change prices until more definite information is obtained as to the specific content of the recent regulating order in the United States. There have been a certain number of price changes during the week in such lines as cistern pumps, hay fork pulleys, padlocks, handsaws, ripsaws, coping saws, wood split pulleys, all in an upward direction. Linseed oil was in weaker market but turpentine was in firmer tone. Asbestos sheeting is one of the lines that has registered a considerable advance. Importers of Canada plate have been gratified over the receipt of stocks that have been on order for several months past. Quotations on this commodity are again being made in the Toronto market. Business has been fairly good during the week with a good demand reported for winter lines.

MONTREAL MARKETS

MONTREAL, October 3.—The event of the week in Montreal is the annual convention of the Canadian Wholesale Hardware Association and from the point of view of those interested in hardware markets this meeting of representative hardwaremen and manufacturers is re-assuring. For an important feature of the first proceedings was the optimistic tone prevailing to the effect that the top note in advancing markets for hardware has been struck as far as men can judge at this stage, and the return to steadier markets is in sight. As regards markets in general at this time the demand for winter lines of goods, skates, sleigh bells, cow ties, heaters, furnace appliances, carriage heaters, ash sifters, shovels, axes and axe-handles, has fully set in. There is little moving in shelf goods or builders' hardware, and the tendency of the retailer now is towards judicious sorting of stock without any speculative buying. Business in general is good.

Shelf Goods Are Coming Steadier

Montreal.

SHELF GOODS.—This week has been singularly empty of change notes in shelf goods and heavies also. There is an impression now that these lines have reached about the top of the market, and few indications of forthcoming alterations have been available. The situation across the border is affecting the matter of these markets more and more, and tends to develop steadiness now rather than rapid changes such as have been experienced in the past.

Nails And Wire Still Unchanged

Montreal.

NAILS AND WIRE.—There are no alterations this week in nails or wire prices. Standard steel wire nails maintain their market at $5.50 base, and cut nails at $5.75 base. Wire base price is still $6.50 per hundred pounds. The matter of the price of U.S. poultry wire netting is still being decided upon, but an announcement on this is expected before long.

Iron Pipe From Two Inch Up, Nominal

Montreal.

IRON PIPE.—There is no improvement in the situation as regards iron pipe. This week's reports show that even sizes above only two inch pipe are subject to prices which are only nominal owing to the extreme difficulty of manufacture. The supply of strip is most uncertain, and unless enough is available manufacturers will not venture quotations as to cost.

Iron And Steel Situation Steady

Montreal.

IRON AND STEEL.—There have been no alterations in the quotations for iron and steel this week as compared with last week. The market is very steady, and the difficulties as to supply continue. There is, however, every hope that the more conditions in the main metals are adjusted and controlled by the United States and Canada in consultation the better will the situation become. Quotations are as previously given and follow:

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 18-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Price Adjustments In Some Sheet Metal

Montreal.

SHEETS, PLATES, ETC. — There have been adjustments of price on black sheets this week in Montreal. The 10 and 12 gauge sizes have advanced a dollar a hundred pounds, but a decline of fifty cents a hundred pounds is registered in sizes from 14 gauge to 28 gauge. The situation is that holders of any stocks of these plates in the sizes which are subject to the U.S. export restrictions are conserving where they have reason to fear that they may not be able to get any more quickly. The ten and twelve gauges and thicker plates are the sizes the U.S. Government will not allow across the border except for munition making purposes or kindred uses. If no more can be obtained, then prices of the present small stocks will advance still higher. Some adjustments in Gorbals "Best-Best" gal-

vanized plate are noted this week. The 26 gauge is quoted 20 cents per hundred pounds lower at $12.25 instead of $12.45. The 28 gauge is also 20 cents lower, and the 10¾ oz. is 50 cents lower. This is merely a matter of adjustment as stocks permit. There is a marked shortage of Canada plate and also of tin-plate. It is expected that the fixing of prices on tin-plate in the U.S. will be announced by the end of the week, and the understanding is that the American prices will probably maintain also in Canada.

MONTREAL—	Montreal, 100 lbs.
10 gauge	$12 50
12 gauge	12 60
14 gauge	11 15
16 gauge	11 25
18-20 gauge	11 30
20-22 gauge	11 35
26 gauge	11 40
28 gauge	11 50

Demand For Heaters On The Increase

Montreal.

STOVES, RANGES, ETC.—There is a good demand for the heater stoves of all kinds, better than had been noted previously, though still some hint is heard here and there to the effect that high prices have been hindering retail business in ranges of late. As the chances are not very strongly in favor of lower priced ranges for some time, these difficulties will probably pass as need for new goods of this description arises in the various districts. Good business in the main is reported in centres of distribution to retail trade in the line of stoves, ranges, heater, etc., both coal and oil stoves. Galvanized and enamelled ware are in good demand it is said, and although the shortages of tin-plate, Canada plates and sheet metal of all kinds is most marked, and prices high, expectations are that there will be improved conditions as United States adjustments of market factors are made.

Gasoline And Coal Oil Steady

Montreal.

GASOLINE.—The market for gasoline and coal oil is still unchanged, and merchants in a large way of business as well as refiners in this district of gasoline from the crude are almost hourly anticipating advances. Crude oil has been getting steadily firmer, but so far no changes have come in gasoline or coal oil. Consumption of coal oil is increasing with the advance of the fall and gasoline demand is about normal for the season, the big summer demand for automobiles being on the wane, but industrial demand is well maintained. Quotations for gasoline are still 32½ cents per Imperial gallon, and for coal oil Royalite 17 cents and Palacine 20 cents per Imperial gallon.

Rope Markets Are Steady At Advance

Montreal.

ROPE.—Following the advances in the base prices of the main lines of rope and cordage last week there have been no changes during the present week, but the market tone continues exceedingly firm. Demand for rope is not at present heavy, however, though a resumption of activity is looked for before the winter. Production is well abreast of consumption of rope in the meantime. Advances in the lines of shelf goods involving Manila and sisal in their manufacture were noted last week. As the market continues to be influenced by the same difficulties and handicaps in securing supplies as formerly further advances are not unlikely.

POULTRY NETTING UP

While HARDWARE AND METAL is about to go on the press, advice was received that an advance has been made effective on the price of Canadian and American poultry netting through the change of discount to 15 per cent. off list on Canadian and 10 per cent. on American netting. Change is effective at Montreal, Toronto, Hamilton, London.

Declining Trend In Some Old Metals

Montreal.

OLD MATERIALS.—A number of changes are made this week in the market quotations for the principal old metals. The tendency of market is in the main downwards for the costlier metals, but old iron prices are again advancing. Old cast iron in fact has advanced as much as from $2 to $4 per gross ton beyond former quotations. Tea lead is down a cent a pound. Heavy lead pipe is also down a cent; red brass and light brass are lower. Scrap zinc is unchanged. Rubber prices are also unaltered.

MONTREAL—		
Tea lead	$ 0 06½	....
Heavy lead pipe	0 08½	....
Yellow brass	0 14	0 15
Red brass	0 20	0 21
Light brass	0 09	....
Scrap zinc	0 06	....
Heavy copper	0 22	0 23
Old cast iron, per gross ton	25 00	26 00
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy moulded steel	20 00	22 00
Pipe scrap	17 00	18 00
Stove plate, per ton	20 00	....
Old rubbers, boots and shoes	0 08½	....
Overshoes, lumbermen's rubbers boots	0 06¾	....
Bicycle tires	0 03½	....
Auto tires	0 06	....

Little Change Of Tone In Lead Goods

Montreal.

LEAD PRODUCTS.—The market is steady in the principal lines of lead products listed below, and prices are unaltered this week. A slightly firmer tone in lead is noticed, and this may tend to firm up the market for the manufactured products of this metal, but with demand not pressing the tone of steadiness is likely to be maintained longer than would otherwise be the case. Quotations are still as under:

MONTREAL—	
Lead pipe, lb.	$0 18
Lead waste pipe, lb.	0 19
Lead traps and bends	20% on list
Lead wool, lb.	0 18
Lead sheets, 3 lbs. sq. ft.	0 16¾
Lead sheets, 3½ lbs. sq. ft.	0 16¾
Lead sheets, 4 to 6 lbs. sq. ft.	0 17

Ingot Metal Market But Little Unchanged

Montreal.

INGOT METALS.—The market for the ingot metals is little altered from last week.

TIN.—No change is registered in tin, and from 64½c to 65c are the quotations.

COPPER.—From 30c to 31c still represents the copper market in Montreal, referring to sales from stock, as the market at date was without transactions.

LEAD.—A firmer tone was noted in New York, as to lead, but the local quotations remain as last week, viz.: 11¼ to 11¾ cents.

SPELTER.—The market for spelter was unaltered at 11 to 11½ cents.

ANTIMONY.—Antimony was obtainable in Montreal at from 18 to 19 cents. The market was quiet.

ALUMINUM.—The only alteration in aluminum conditions is the easier tone making 65c representative of the market with no higher quotation mentioned.

TORONTO MARKETS

TORONTO, October 4.—While price changes have not been as numerous as in some recent weeks still there has been enough activity in the markets to make them of real interest. Cistern pumps, hay fork pulleys, padlocks, handsaws, ripsaws, coping saws, wood-split pulleys are some of the lines in which changes have been recorded. An incident of more than passing interest has been the arrival during the week of a considerable quantity of Canada plate. This market has been practically bare of this commodity for some time past. These goods have been on order for months past, shipments of some in fact should have been made in June. The point of interest to dealers is the fact that import orders have started to arrive. Some firms are entirely out of the market on No. 10 gauge black sheets, while others having stocks on hand have increased the price. The United States Government has placed a tight embargo on No. 10 gauge and heavier and there is small chance of additional supplies coming into this market. Business has been fairly good, although no large orders are being placed.

Cistern Pumps Have Been Moved Up

Toronto.

PUMPS.—An increase in the price of pitcher spout and closed spout cistern

pumps has been made effective during the week. In the pitcher spout cistern pumps the following prices prevail: No. 1 x 1, $1.80 each; No. 1 x 2, $2 each; No. 1 x 3, $2.25 each; No. 1 x 4, $2.65 each. On the closed spout pumps the following prices are quoted: No. 2 x 1, $2.25 each; No. 2 x 2, $2.50 each; No. 2 x 3, $2.80 each; No. 2 x 4, $3.30 each.

Hay Forks, Pulleys And Wood Split Pulleys Up

Toronto.

PULLEYS. — Hay fork pulleys and wood-split pulleys have registered advances during the week. In the instance of the Louden hay fork pulleys the advance amounts to 50 per cent., the new price now being quoted is $12.50 per doz. On wood-split pulleys the discount has been changed, which provides for a substantial increase, the new discount being 25 per cent. off list.

Yale Padlocks Higher By 5 Per Cent.

Toronto.

PADLOCKS. — Yale padlocks have again been advanced approximately 5 per cent. and prices that are now effective on some of the various numbers are as follows: No. 326, $9.15; No. 412, $6.10; No. 415, $6.10; No. 430, $11.80; No. 450J, $3.75; No. 805; $13.80; No. 853, $24; No. 863, $29.40. Padlocks is one of the lines in which there have been a number of advances within recent months.

Handsaws, Ripsaws, Coping Saws Higher

Toronto.

SAWS.—Higher prices on handsaws, ripsaws and coping saws have been made effective in certain quarters, following the recent announcement of a general advance in all makes of saws. Atkins handsaws, 20-inch, are now quoted at $26 per dozen; 22-inch at $28.60; 24-inch at $31.10, and 26-in. at $32.40 per doz. Ripsaws, 26-in., are quoted at $32.40 per doz. Jones coping saws have been advanced to $17.80 per dozen. Disston's handsaws are quoted as follows: D 8 x 18-inch, $24.54 dozen; D 8 x 20-inch, $27.39 dozen; D 8 x 22-inch, $30.16 dozen; D 8 x 24-inch, $32.32 dozen; D 8 x 26-inch, $33.96.

Abrasive Wheels Withdrawn From Market

Toronto.

ABRASIVE WHEELS. — One large wholesale firm report a scarcity of emery wheels and carborundum wheels and have according instructed their representatives to discontinue quotations. In lieu thereof they are placing an artificial abrasive wheel before the trade which they are quoting at 45 per cent. off list.

New Plant Built To Manufacture Wipers

Toronto.

WIPERS, WASTE.—One of the local manufacturers of waste has recently completed a plant for the making of washed and sterilized wipers. These wipers are made from old cloth of various descriptions and have been used by some concerns to take the place of waste. These wipers have been popular in munition plants. Sale of this class of goods has been reported big and the manufacturers have felt encouraged to install a plant for their manufacture. White wipers are quoted at 12c. per pound, light wipers at 10c., and dark wipers at 9c. per pound. Cotton waste is holding steady in price with a firm undertone to the market. Big advances have recently taken place in the raw cotton market until the price of this commodity is pretty near back to the recent highest level. Manufacturers point out that with a continuation of this condition in the primary market the time is rapidly approaching when waste will of necessity have to follow upward also.

Household Scale Discounts Announced

Toronto.

SCALES.—New prices recently issued on the various kinds of scales still hold effective. Discount on Champion scales is 10 per cent. off list, while Standard and Household scales carry a discount of 25 per cent. The announcement of the manufacturers of 20 per cent. discount on Standard and Household scales is stated to have been made in error and that the right discount is 25 per cent. off list. List price on 10-lb. Household is $5 with an extra stamping charge of 10c. For the 25-lb. Household the list price is $6, with 30c. stamping charge. List prices on Champion scales will be found in current quotations.

Asbestos Sheeting Takes Big Jump

Toronto.

ASBESTOS SHEETING. — Recent costs of asbestos sheeting to importers from the United States have necessitated a material advance in prices locally. Where formerly the range of prices was from $9 to $12 per 100 pounds, the new range is from $12 to $15, representing an advance of 25 per cent. This material is scarce and very hard to obtain. A shipment came into the local market recently and the first cost to importers established a new record for this material. Other building materials held steady in price during the week.

Gasoline And Coal Oil Hold Steady

Toronto.

GASOLINE, COAL OIL.—There has been no disposition during the week to alter prices on gasoline, coal oil or lubricating oils. Castor oil, however, shows a firmer tendency with an advance of 5c. per pound recorded, making the selling price 45c. The possibility of regulation of prices on oils of various kinds in the United States is having the effect of holding prices steady for the time being. Consumption of gasoline still keeps heavy and with the coming of longer days greater quantities of coal oil are being burned in the country districts, both for heating and lighting purposes. Gasoline is quoted at 31½c and 32c and benzine at 30½c and 31c. Coal oil prices will be found in current quotations.

Canada Plate Stock Is Again On Sale

Toronto.

STOVES, ENAMELWARE. — Stove manufacturers and makers of stovepipe have been somewhat elated during the week over the arrival of stocks of Canada plate from the United States. This market has been practically bare of this material for some time past and it is with much satisfaction that dealers are again in a position to supply the needs of the trade. This material is largely used in the manufacture of stovepipes. Quotations being made on this plate are as follows: Dull, 52 sheets, $10.60; 60 sheets, $10.70. Polished, 52 sheets, $12; polished, 60 sheets, $12.10. The fact that import orders are beginning to come forward is the point of greatest interest to dealers. When present orders are delivered it is possible there will be a considerable time elapse before additional orders can be placed. Authentic advices during the week stated that the United States Steel Company would probably have no more Canada plate to offer for a year or more. Demand for stoves and ranges is reported very good and shipments are going forward as rapidly as the manufacturers can assemble the goods. Most of the manufacturers are behind in their deliveries. Enamelware remained unchanged and in steady position so far as prices are concerned.

Cordage Holds Steady At Recent Advances

Toronto.

CORDAGE, TWINE. — With the exception of some light demand for binder twine for the purpose of binding corn there has been but little activity in the twine market. Prices remain unchanged and will in all probabiliay do so for the balance of the season. There has been a steadiness in the market for cordage following the advances recorded recently. Demand for rope is light at present, as it is between-seasons so far as trade goes. Pure manila rope is quoted on the basis of 39c per pound, British manila and New Zealand hemp rope on a basis of 33c and sisal rope at 27½c per pound basis.

No Disposition To Quote Lower Prices Yet

Toronto.

IRON AND STEEL. — Locally there has been no disposition to quote lower prices on iron and steel. It is pointed out by some dealers that present prices are based on contract prices for iron and steel and that it would be some distance in the future before the mills reach the point where they can begin to supply the trade according to the schedule of prices adopted

by the United States Government. In the local market there has been a fair demand for iron and steel.

Embargo On Plates And Prices Go Up

Toronto.

SHEETS, PLATES. — Owing to the embargo placed on the shipment of steel plates of No. 10 gauge and heavier by the United States Government an acute situation has developed in the Canadian market. Some dealers have withdrawn quotations on No. 10 gauge black steel sheets entirely. Those who have any stocks have advanced the price 50c per 100 pounds, making the quotation now $12. On 3-16 inch plate an advance of $1 per hundred pounds has been recorded and a similar advance on ¾-inch boiler plate. Former is now quoted at $13.25 and the latter at $13 per hundred pounds. The United States Government has adopted the attitude of conserving the supply of sheets to the end that shipbuilding may be pressed forward with every possible despatch. Mills have been given orders to turn their energies to the production of plates for this purpose to the exclusion of production of other lines of steel. Galvanized sheets held steady in price. Dealers intimate that the recent conference with authorities at Ottawa anent the payment of duty may bear fruit and there is a probability that the lower range of prices may still prevail. Fairly good stocks of both black and galvanized sheets are reported to be on hand in some instances.

Waiting More Definite Word About Price Fixing

Toronto.

CORRUGATED SHEETS, EAVETROUGH.—Although there has been announcement with respect to fixed prices on certain steel commodities in the United States dealers are still awaiting more specific information before any action is taken with respect to establishing a scale of prices here. It is pointed out that eavetrough and conductor pipe and kindred manufactured lines are selling for less than the plain steel sheets. Quotations on these latter are still made on the basis of 10 per cent. off list. Corrugated sheets also remain unchanged.

TORONTO—	Galvanized Per 100 Sq. Feet	Painted

Readjustment In Boiler Tube Prices

Toronto.

BOILER TUBES.—A slight readjustment has been made in the price of boiler tubes following the announcement in last week's issue of a 10 per cent. increase in price. Supplies of boiler tubes are getting depleted, with small prospect of getting additional supplies from the United States. Dealers locally assert there may be sufficient stocks to last the Canadian trade for the balance of the year if there is not an extra heavy demand. Following are the prices prevailing:

Lead Wool And Lead Sheets Decline

Toronto.

LEAD AND ZINC PRODUCTS.—There was a decidedly weaker tendency in lead products during the week following a similar condition in the primary market. Lead wool was quoted down 2c per pound at 16c, lead sheets for 3 and 3½ pounds to square foot were down 2¼c at 15½c, while lead sheets from 4 to 8 pounds were quoted at 14¾c, a decline of 2¾c per pound. Solder remained unchanged at recent quotations. Demand for lead and zinc products is reported fair.

Old Lead, Brass And Copper Slump Down

Toronto.

OLD MATERIALS.—There was a decidedly weaker tendency in tea lead, heavy lead pipe, red brass and heavy copper during the week. In tea lead there was a decline of ¾c per pound, on heavy lead pipe a decline of 1c per pound, 1c per pound on red brass and 2c per pound on old heavy copper. The market is in a stagnant condition as there is neither buying on the part of mills nor selling on the part of collectors.

Nail Situation Remains Unchanged

Toronto.

WIRE, NAILS.—There is very little buying of nails at the present time owing to the lack of extensive building operations. Conditions in the wire nail trade remain practically the same as outlined in these columns last week. Smooth steel wire remains unchanged at the base price of $6.50 for gauges Nos. 0-9.

Lead Again Down; Good Demand For Copper

Toronto.

INGOT METALS.—There has been a much better demand for copper locally during the past week and prices show a slightly firm tendency in consequence. Tin is holding steady. Lead inclines to weakness, as also do antimony and aluminum.

COPPER.—There was a slightly firmer tendency locally for ingot copper due in a measure to the better demand and also to the embargo which the United States Government has imposed in the shape of requirement of filling needs of the Government and Allies for war purposes before any domestic trade can be looked after. Casting copper locally is quoted at 31½c and electrolytic at 32c per pound.

TIN.—Steadiness characterized the tin market during the week and prices locally held at 63½c to 65c per pound. In the primary market there was dullness and an easier tone in the face of declines in the London market.

SPELTER.—A light demand is reported in spelter and prices remained unchanged accordingly at 10½c per pound. In the primary market there is little business at the present time but there is anticipation that the United States Government will again be in the market in the near future for supplies and this is inducing producers to hold out for their price.

LEAD.—Prices locally were shaded down ½c during the week to 10½c in the face of a weak condition in the primary market. Production of lead has increased of late and consumers are holding out of the market, which usually happens in a declining market. Locally the demand has been fair.

ANTIMONY.—A light demand is reported on antimony and prices were down 1c per pound at 18c. Arrivals of supplies in the primary market with little demand there has also tended to cause weakness in that quarter.

ALUMINUM.—The market is quiet and due to the influence of light demand prices were somewhat lower at 60c per pound, in the local market.

PIG IRON.—The new schedule of prices on pig iron in the United States has not affected the local situation as yet, as the embargo may operate to hold prices firm in this market. Report of the Department of Mines of Canada shows that for the first six months of the present year the production of pig iron was 24,901 tons greater than during the same period last year. Production for the first half of this year amounted to 586,998 tons.

LONDON MARKETS

LONDON, Oct. 2.—Business is good here this week. Fall lines move faster again with the cooler weather. Oil heaters, stove pipes, elbows, stove boards, ash sifters, roofing and building paper all good sellers. Prices, with few exceptions, remain firm. Collections are good.

Building Paper Declines; Nails

London.

DRY BUILDING PAPER.—Prices on dry building paper show a slight decline this week. Following are the new quotations: No. 1 dry fibre paper, $1.10 per roll; No. 2 fibre, 59c per roll; Surprise paper, 66c per roll. There is no change in other lines of paper.

Nails

Nail prices are unchanged this week. There is a good sale for nails at the present time at $5.45 base for wire nails, and $5.75 base for cut nails.

Tinned Spoons, Forks, Advance

London.

TINNED SPOONS AND FORKS.—An advance has been made this week in prices on tinned spoons and forks. New prices are as follows: No. 900 teaspoons, $3.25 per gross; No. 900 dessert spoons, $6 per gross; No. 900 table spoons, $6.50; No. 900 dessert forks, $6.50; No. 900 table forks, $7 per gross.

Glass

There is a fair sale for glass now at unchanged prices of 50 per cent. off for single and double diamond and 40 per cent. off for cut lights.

Sash Hangers, Pulleys Advance

London.

SASH HANGERS.—An advance has been made this week on storm sash hangers and sash fasteners. New prices on hangers are $1.45 per doz., and on storm sash fasteners, $1.70 per doz.

Line Pulleys

Higher prices are quoted this week also on Rolston C. line pulleys. New quotations are as follows:—Japanned, $3.25 per doz.; galvanized, $4 per doz.

Lanterns, Burners, Rope Prices Firm

London.

LANTERNS.—Prices are unchanged this week on lanterns and lantern globes. Short and long pattern lanterns are $12 per doz., and lantern globes in short and long pattern are as follows: 6 doz. to case, 85c per doz.; 3 doz. to case, 90c per doz.; 1 doz. to case, $1 per doz.

Lamp Burners

Tin lamp burners, A. Ontario are quoted this week at 80c per doz.; B. Ontario burners are $1.05 per doz.

Rope

Rope prices are firm at unchanged quotations. Prevailing prices are: 39c base for pure Manila; 33c for British Manila, and 27½c for sisal.

Clothes Lines Up; Weather Strip

London.

SISAL CLOTHES LINES.—Advances are recorded this week on sisal clothes lines, bringing new prices to the following: 48 ft. line, $1.50 per doz.; 60 ft. line, $1.90 per doz.

Weather Strip

Wood and felt weather strip is quoted this week at 75 per cent. off list; Swan strip is 75c per set, and Frost King strip is $4.40 per doz. pkgs.

Harvest Tools

Harvest tools are unchanged this week at 25 per cent. off list.

Snow Shovels

Snow shovels are quoted at 12½ per cent. off list.

Hose Couplings, Nozzles Advance

London.

HOSE COUPLINGS AND NOZZLES. Higher prices are being quoted this week on hose couplings and nozzles. Brass hose couplings are as follows: ½-in., $1.70 per doz.; ⅝-in., $1.75 per doz.; ¾-in., $1.80 per doz.; 1-in., $3.50 per doz. Gem hose nozzles are quoted at $6 per doz.

Ash Sifters

Ash sifters are unchanged in price this week at $2.15 per doz. for wood-sided sifters; $2.90 each for Banner sifters, and $5.25 each for Rocker No. 1 sifters.

Stove Cement, Oil Heaters

London.

STOVE CEMENT. — Rutland stove cement is quoted this week at $1.85 per doz., in 3-lb. packages, and $2.75 per doz. in 6-lb. packages.

Oil Heaters

With an increasing demand for oil heaters, prices are unchanged at $3.85 each for No. 520 heater; $3.80 for No. 525; and $4.25 for No. 530 heater.

Sleds

Sleds are quoted this week at 37½ per cent. off list.

Wood-lined stove boards are 30/10 per cent. off list.

Cow ties are quoted at 12½ per cent. off list.

Putty Higher; White Lead Firm

London.

PUTTY.—An advance in price has gone into effect on putty this week, bringing new prices to the following:—Standard putty in 25, 50 and 100-lb. drums, $4.75 per 100 lbs.; pure putty in 25, 50 and 100-lb. drums, $5.75 per 100 lbs.

White Lead in Oil

White lead prices are firm this week at new prices of $18 per 100 lbs. for pure lead in ton lots and $18.30 per 100 lbs. in less than ton lots.

Linseed Oil And Turps Unchanged

London.

LINSEED OIL.—Prices on linseed oil are unchanged this week at $1.49 per gal. for raw oil in 1 to 2 bbl. lots, and $1.52 for boiled. In 3 to 5 bbl. lots raw oil is $1.48 per gal. and $1.51 for boiled; in 6 to 9 bbl. lots raw oil is $1.46 per gal. and boiled oil is $1.49 per gal.

Turpentine

Turpentine prices are unchanged this week at 69c per Imp. gal. in 1 bbl. lots; in 2 to 4 bbl. lots turpentine is 68c per gal., and in 5-gal lots it is 76c per Imp. gal.

WINNIPEG MARKETS

WINNIPEG, Oct. 2.—After two weeks of very steady markets this week shows many changes all of which show substantial advances. The new prices set by the U.S. Government on steel commodities are not, "In the opinion of many of the Winnipeg jobbers" going to effect the selling prices here as all American mills are booked to capacity for many months in advance, and prices being offered by foreign buyers are even much in excess of prices fixed by the Government.

Barb Wire Prices Revised; Cow Bells

Winnipeg.

BARB WIRE.—The following revision in barb wire shows a reduction of 15c per spool below the last quotation, this being an error in estimating costs, the high price being figured on the all rail rate of freight. The revised prices are based on the lake and rail rate. Today's prices are quoted as follows:

Lyman, $4.95 Fort William, $5.25 Winnipeg;

Glidden, $4.80 Fort William, $5.10 Winnipeg; Baker, $4.75 Fort William, $5.05 Winnipeg.

Cow Bells

Cow bells show another increase of approximately 12½ per cent. making to-day's price on Holstein and Kentucky pattern 5 per cent. off list, net prices are as follows:

Cow Bells—7, $2.35 doz.; 6, $2.85; 5, $3.80; 4, $4.75; 3, $5.70; 2, $7.60; 1, $9.50; 0, $11.40.

Big Advance On Wood, Steel Blocks

Winnipeg.

Wood and Steel Blocks

Prices on wood and steel blocks which have remained firm for some months now show strong advances amounting to 25 per cent. on wood and 12½ per cent. on steel. To-day's market prices are quoted herewith:

Wood Blocks—Single, 3 in., 70c each; 4 in., 85c each; 5 in., 90c; 6 in., $1.10; 7 in., $1.30; 8 in., $1.65; 10 in., $2.75; 12 in., $4.45; Double, 3 in., $1.30 each; 4 in., $1.60; 5 in., $1.75; 6 in., $2; 7 in., $2.40; 8 in., $2.85; 10 in., $4.50; 12 in., $7.50; Triple, 4 in., $2.15 each; 6 in., $2.90; 8 in., $4.25; 12 in., $10.65.

Steel Blocks—Single, 3 in., 63c each; 4 in., 76c; 5 in., 81c; 6 in., $1; 7 in., $1.17; 8 in., $1.75; Double, 3 in., $1.17 each; 4 in., $1.45; 5 in., $1.55; 6 in., $1.80; 7 in., $2.15; 8 in., $3; Triple, 4 in., $1.95 each; 5 in., $2; 6 in., $2.60; 7 in., $3.15; 8 in., $4.65.

Wire And Chains Advance In Price

Winnipeg.

Wire

In sympathy with the advances in other lines of wire, advances are herewith given on coil spring and plain twist as follows:

Coil spring wire, galvanized, Ft. Wm., $5.75; Winnipeg, $6.10 per 100 lbs.; No. 12, Ft. Wm., $5.95, Winnipeg, $6.35 per 100 lbs.; Plain twist wire, No. 12, Ft. Wm., $5.10, Winnipeg, $5.50 per 100 lbs.

Chains

Advances have just been put into effect by Winnipeg jobbers on halter chains and tie out chains "although advanced by the manufacturer's some months ago," thereby giving the hardware dealer the benefit of securing their requirements up to the present time at old prices. To-day's markets on halter chains is 20 per cent. off list and tie out chains 47½ per cent. off list.

Lamp Chimneys Up 40 Per Cent.; Burners

Winnipeg.

Lamp Chimneys

Owing to the scarcity of labor and high cost of production, lamp chimneys show one of the heaviest advances since the outbreak of the war, amounting to about 40 per cent. present prices are quoted herewith:

Lamp Chimneys—8 doz., case A, $7.80 case, $1.05 doz.; 4 doz., case A, $4.20 case, $1.05 doz.; 6 doz., case B, $6.50 case, $1.15 doz.; 3 doz., case B, $3.50 case, $1.15 doz.

Lamp Burners

Owing to the high prices prevailing on brass, lamp burner manufacturers have been compelled to again advance their prices and to-day's quotations are herewith given:

Lamp Burners—Banner A, $1.10 doz.; Banner B, $1.55; Regal D, $2.80; Security A, $1.35; Security B, $1.65.

Lantern Burners—No. 1, 93c doz.; No. 2, $1.50 doz.

Game Traps And Galvanized Wire Up

Winnipeg.

Game Traps

In last week's issue of HARDWARE AND METAL mention was made of an expected advance in game traps, this has just come to hand and to-day's prices are as follows:

Game Traps—Victor—No. 0, $1.58 doz.; No. 1, $1.86; No. 1½, $2.80; No. 2, $3.90; No. 3, $5.20.

Game Traps—H. & N.—No. 1, $2.86 doz.; No. 1½, $4.29; No. 2, $6; No. 3, $8; No. 4, $9.45.

Game Traps—Jump—No. 1, $2.40 doz.; No. 1½, $3.65; No. 2, $5.33; No. 3, $7.08.

Game Traps—Newhouse—No. 2½, $13.62 doz.; No. 3½, $15.27; No. 4, $13.62; No. 4½, $33.05; No. 50, $70.30; No. 5, $99.25.

Soft Galvanized Wire

As predicted by HARDWARE AND METAL, the advance is now effective on soft galvanized wire which shows an increase of about 40c per 100 lbs. To-day's market prices are as follows:

Plain Galvanized Wire—No. 9, $5.65 Fort William, $6.05 Winnipeg; No. 12, $5.85 Fort William, $6.25 Winnipeg, per 100 lbs.

Plain Galvanized Wire—No. 6-7-8, $7.60 per 100 lbs., Winnipeg; No. 10, $7.70 per 100 lbs., Winnipeg; No. 11, $7.80 per 100 lbs., Winnipeg; No. 13, $6.85 per 100 lbs., Winnipeg; No. 14, $8.15 per 100 lbs., Winnipeg; No. 15, $8.70 per 100 lbs., Winnipeg; No. 16, $9 per 100 lbs., Winnipeg.

Pipe Cutters Up; Washing Machines

Winnipeg.

Pipe Cutters

Prices on Barnes pipe cutters which have remained steady for some time are again advanced and the following prices now prevail No. 1, $2.50 each; No. 2, $3.30 each; No. 3, $5.50 each. Extra wheels for No. 1, 15c each; No. 2, 18c each.

Washing Machines

Advances which were made some time ago by the manufacturers of washing machines are only now being put into effect by the Winnipeg jobbers, and then only on two lines, namely: Snowball and New Idea. However, a general revision may be looked for later, to-day's prices on the above lines are Snowball $8.50 each, New Idea $11.35 each.

Saw Blades; Poultry Netting Advanced

Winnipeg.

Hack Saw Blades

Hack saw blades which have remained firm for many months, show an advance and to-day's ruling prices are: Star, 6 in., 65c doz.; 8 in., 75c doz.; 9 in., 80c doz.; 10 in., 90c doz.; 12 in., $1.20 doz.

Poultry Netting

Prices on poultry netting show a strong advance, however, this commodity has not been advancing with the other lines of wire which makes to-day's advance look rather large, being about 33 1/3 per cent. increase. To-day's discount on poultry netting is 15 per cent. off list, making the net prices per roll as follows:

1 in. x 24 in., $5.95 per roll; 1 in. x 30 in., $7.20; 1 in. x 36 in., $8.50 per roll; 2 in. mesh x 24 in., $2.90; 2 in. x 30 in., $3.40; 2 in. x 36 in., $4.05; 2 in. x 48 in., $5.25; 2 in. x 60 in., $6.55; 2 in. x 72 in., $7.80 per roll.

Banner Netting—24 in., $4.15 per roll; 36 in., $5.30; 48 in., $6.25; 60 in., $7.40; 72 in., $8.40 per roll.

Barb Wire, Nails And Staple Prices

Winnipeg.

During the week the wire and nail manufacturers announced firm prices on their products. Therefore Winnipeg jobbers are now accepting orders for shipment up to April 1 on barb wire, wire nails and staple at prices quoted herewith: Barb wire, Lyman, $4.95 Ft. Wm., $5.25 Winnipeg; Glidden, $4.80 Ft. Wm.; $5.10 Winnipeg; Baker, $4.75 Ft. Wm.; $5.05 Winnipeg; wire nails $5.60 Ft. Wm.; $6.00 Winnipeg; staples, $5.85; Ft. Wm.; $6.25 Winnipeg.

Linseed Oil On Decline; Turpentine

Winnipeg.

Linseed Oil

Linseed oil prices this week show a decline of ten cents per gallon, owing to the drop in the flax market. To-day's prices are: raw $1.65 per gal.; boiled, $1.68 gal.

Turpentine

Turpentine prices remain unchanged although further advances are expected, to-day's quotations are herewith given: blls. 85c gal.; ½ bbls., 88c gal.; 5 gals. 90c gal.; 1 gal., 90c gal.

PITTSBURG MARKETS

PITTSBURG, Oct. 1.—The long suspense as to how iron and steel prices will be made is ended. They will be fixed by agreement between the Government and the producers, and perhaps later on by Government decree resting upon legislation now contemplated. As it was suggested in last report might be the case, an agreement was made upon iron and steel corresponding with that previously made upon copper.

The iron and steel manufacturers assembled in Washington Friday, Sept. 21, as reported a week ago. Addresses were made urging them to settle the matter of prices and to dismiss such opposition as they might have to President Wilson's strongly held view that there should be but one price, applying to the Government, its Allies in the war, and the general trade. It may be mentioned, parenthetically, that there has never been a

precise statement as to whether the phrases, "the public" and "the general trade," in this connection would be interpreted as including foreign buyers of steel for commercial purposes. The iron and steel manufacturers accordingly submitted a schedule of prices to the War Industries Board, which conducted the negotiations, and Chairman Scott, of the Board, while observing that the prices were somewhat higher than they had hoped for, agreed to submit them to the President. On Saturday afternoon the manufacturers were advised that the President had accepted the schedule, but it was not until Monday afternoon that the announcement was made by the Committee on Public Information at Washington. The schedule was: Lake Superior iron ore, no change from the 1917 list, which sets Mesabi non-Bessemer at $5.05 on Lake Erie dock; pig iron, $33; steel bars, 2.90c; structural shapes, 3.00c; plates, 3.25c, f.o.b. mill, Pittsburgh or Chicago. Thus Pittsburgh prices as a basis for the whole country disappear, and Chicago is made a separate basing point, a radical departure right at the start.

Merely a Basis

Two things occurred. First, the manufacturers agreed to make "one price for all," whereas legally the Administration had authority to fix prices only with respect to purchases made for the Government's own account. Second, a general basis for prices was adopted. It was not a schedule of prices, but a statement of certain specific prices, from which other prices could be worked out, in proper relation to the basis. What was needed was a basis to determine the general level, and to show what measure of profits the manufacturers should be accorded. The $33 pig iron price applies to basic, No. 2 foundry and malleable, at valley furnaces. Bessemer, low phosphorus, etc., at valley furnaces, as well as prices for various grades at furnace in other districts, are to be worked out. It is suggested that Bessemer should be set at 10 per cent. above basic, as that has been the average spread for years. Birmingham prices will probably be a shade below $30. Pig iron prices in general, and prices for the various important finished steel products, are to be worked out by committees of the American Iron and Steel Institute, in the main the committees that have been engaged for several months past in distributing Government orders to the mills in accordance with their tonnage capacity and their ability to produce the various materials. The conclusions of these committees will be placed before the War Industries Board, and prices as approved will be announced at Washington from time to time. The statement is made, apparently upon official authority, that prices upon about 150 iron and steel commodities are to be fixed.

For wire prices it seems quite probable that the official prices of the American Steel & Wire Company will be adopted, these being based upon $3.20 for nails. The prices were first announced March 5 last, and have been adhered to by the leading interest, while independents advanced first to $3.50 and then to $4.

For steel pipe it is likewise probable that the official prices of the National Tube Company will be adopted. This discount list is based upon 55 per cent., and was published April 2 last. Afterwards all the independents but Republic advanced to 49 per cent., and later some advanced to 42 per cent.

To determine a price for billets, a familiar practice often employed in making sliding scale contracts, is to take one and one-half times the price of pig iron, which would make $49.50, and sheet bars for such contracts have usually been set at $1 above billets. Thus billets and sheet bars are likely to be in the neighborhood of $50. If so, black sheets would be fairly fixed at 5.00c, or a trifle less, with blue annealed on a slightly lower basis. Galvanized would be about 1.50c above black.

Market Inactive

Naturally the market has been inactive. There was scarcely any activity before the price fixing agreement, and now there is practically none. The whole thing is new. Producers, of course, do not rush to sell when there has been a radical reduction, even though it is a reduction from a quite fictitious level. Buyers are indisposed to buy, except for early deliveries, and these the mills cannot make. The new prices are subject to revision January 1 or later. There is also the contingency that the Pomerene Bill, now in the Senate, may be enacted. It looks to giving the Administration full legal authority to fix all iron and steel prices for everybody. With such authority the Administration might be disposed to reduce prices below the present agreed level. In the circumstances, there will be little disposition in future for producers to sell, or consumers to buy, for deliveries far ahead. The Priority Board is to have strict supervision of the sequence in which orders are filled, and thus the placing of an order by a commercial buyer does not insure that it will be filled at any particular time. In the circumstances, with the mills well filled with orders and with the great mass of consumers correspondingly well covered, there will be a transition to a condition of hand-to-mouth buying, relatively speaking. This necessarily involves a period, perhaps of several months, in which commercial buying will be quite light.

Enormous War Orders

An immediate result of the price agreement is that large war orders will be placed. Upon excellent authority it is stated that within two months the Government will distribute orders for about 7,000,000 tons of steel, chiefly for shipment in 1918. While the Government has been placing orders right along, chiefly at tentative prices, to be revised when the price question should be finally settled, it has naturally held back such business as could be held back without detriment to the prosecution of the war. Substantially all the purchases on account of our Allies have been held back since the Government did not have, as in the case of its own purchases, the power to fix the prices. Thus a large amount of business has accumulated, and the 7,000,000 ton statement, while somewhat startling, really furnishes no cause for astonishment. Production of finished rolled steel has of late been at the rate of about 33,000,000 tons a year, while the capacity is equal to 35,000,000 tons or more, full operation having been impossible, chiefly because of shortage of coke. Thus the 7,000,000 tons is in the neighborhood of 20 per cent. of a year's output. Part of it is merely in sequence to the steel furnished the Entente Allies last year, when production was less, only about 30,500,000 tons. Eventually there should be plenty of steel for commercial requirements.

Coke

While a price for Connellsville coke was fixed at the same time that steel prices were agreed upon, the procedure was slightly different, and the principle was different. The procedure was different in that the President accepted without modification the iron and steel prices submitted, while the $6.50 price submitted by the Connellsville coke producers he cut by 50c, making the announced price $6. The principle was different in that the President, under the Lever Act, has full authority to fix the coke price for everybody.

INCORPORATIONS

Montreal, Que.—United States Coal Corporation, Ltd., has been incorporated with a capital of $25,000 to carry on business as coal, coke, metal dealers and foundrymen.

Winnipeg, Man.—The Canada Atlantic Grain Co., Ltd., has been incorporated with a capital of $100,000 to carry on general business of grain dealers and to manufacture linseed oil and linseed cake.

Ottawa, Ont.—C. E. Fleming Tie and Lumber Co., Ltd., has been incorporated with a capital of $100,000 to carry on business of lumber merchants and manufacturers of wooden ware.

Regina, Sask.—Canadian Nu-Fuel Company, Ltd., has been incorporated with a capital of $100,000 to carry on business of managing new fuel known as Oakoal.

Toronto, Ont.—Central Iron Works, Ltd., has been incorporated with a capital of $100,000 to manufacture and deal in metals and metal products, locomotives, automobiles, aircraft etc., and to carry on general business of iron and steel makers.

Walkerville, Ont.—Standard Foundry and Supply Company, Ltd., has been incorporated with a capital of $40,000 to carry on general foundry business together with trade or business of iron masters, steel makers, converters, brass founders, tin-plate makers and to deal in all articles in which iron, steel or any other metals are used. F. S. Ferguson is manager, T. P. Charlton, Superintendent, both of St. Thomas, Ont.

WEEKLY PAINT DEPARTMENT

Scientific Window Display

Big Factor in Pushing Paint Sales — Cheap and Effective Method of Advertising—Window is Agent of Force.

PROGRESSIVE hardware merchants throughout the country are now realizing the immense advertising value of their show windows in connection with the sale of paint, and are making the greatest possible use of them. Oftentimes it is only necessary that the suggestion be offered to passers-by for paint sales to result, and this end is best achieved through the medium of window display.

Take a few minutes off to-day to look at your own window of paint. View it from the customers' standpoint if you can, and you will agree that the foregoing statement is correct.

What is the value to the average business man of his window display? How can the average man improve his business by this method? This is a topic that has come in for a greater share of consideration by all classes of industrial men to-day. But by some it is looked upon as a matter that brings with it little remuneration. For this reason they neglect this opportunity, and are losing more or less each day that it is neglected. Oftentimes paint displays are made simply because the space is available, and the display itself does not receive any special consideration.

Simply filling your paint display window with a conglomerate lot of articles, or even with a few, poorly arranged, does not attract the passer-by, and has no practical value at all. To make the window of real value, you must study the topic with care. Attention should be given to the fact that there is something in anticipating one line of sales by the proper display of some others. In arranging paint displays special seasons and events of the year can be taken into consideration with advantage. Take for instance the holiday season. A window displayed with taste and attractiveness, with a little touch illustrative of special celebrations, such as Thanksgiving Christmas and Easter, carries extra weight with the buying public.

Value of Seasonableness in Displays

There are special seasons of the year when various lines can be played up to advantage. That is the time when these things should be made a particular window feature. It is at such seasons that there is a particular cause for the window being made to do its part in the game that will appeal to a larger number of customers. Appeal to the passer-by with vigor. Make him stop and inspect your window. That is the invitation that he many times looks for and will profit by. Make it so forceful that he will be compelled to enter and become one of your real friends. Many customers are made with this simple method of business getting. Your store, if located in the small city, can still claim a large share of the trade that might and does go elsewhere.

Should be Changed Frequently

Some storekeepers do not deem it wise to change their display more often than every thirty days. This is a serious error in this age of active business life. Even though the window is permanently reserved for paint displays, it should be changed frequently. Everyone tires of noting the same display in the window; when it has been noted once or twice, a newer view is desired. If, however, the window has been changed with frequency and then has been attractively displayed, it will become a source of pleasure and a continuous joy to you.

In the large cities, in many of the leading stores, the window is changed every few days, and the cost of making the display runs into many thousands of dollars

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 3.—Interest in the paint market products is this week directed more towards the oils. Linseed oil is in an uncertain mood, but with strong tendencies about the undertone. Turpentine is decidedly stronger this week. There is a steadiness of tone about white lead in oil and putty. This following the recent changes in price is not surprising. In mixed paints the tone is also steady. Business is reported brisk in these lines, and the outlook is for steady activity in production and merchandising of painters' materials. The glass market is firm as ever, and the difficulties besetting the brush market are still present, making all kinds of brushes costly, and causing scarcities of some lines.

Linseed Oil Market In Uncertain Mood

Montreal.

LINSEED OIL.—A complication of factors, all of which have a bearing on the market situation, makes linseed oil a product of very uncertain mood at the present time. First of all there has been the development of the Canadian new crop in the North-West. This has been reported good, and as a result, with flaxseed coming in more plentifully to Winnipeg, an easier note was struck in the primary market. This was noted on Saturday last week. Flaxseed came down to $3.10½ per bushel, which is lower than it has been for some time previously. From crushers, oil could be obtained this week in carload lots at about 3c per Imperial gallon less than the quotations of last week for similar large quantities. The easier note is, however, apparently only passing, and the situation is affected by several other considerable factors, and, while the North-West crop news may tend to incline the market to easier tone, the other factors have the opposite effect. There is a strike at the terminal elevators at Fort William, which may have the serious effect of backing up the whole transportation system between there and the grain-fields, and thus firming the market sharply. It is hoped that the strike will speedily be settled. There is also the fact that the United States flaxseed crop is disappointing, and the demand from across the border will quickly diminish Canadian flaxseed supplies. Consideration of these factors has led a majority of market observers interviewed this week to the view that the present easier tone to linseed oil may be regarded as merely passing, and the prospects for the future considered more inclined to firmness than to easiness. Quotations for linseed oil under existing conditions vary, and are in some cases withheld. One or two firms are not anxious to dispose of linseed oil. Prices mentioned, however, are as follows:

Linseed oil.	Per Imperial gal.	
	Raw.	Boiled.
1-4 bbls. ...	$1.40-1.46	$1.42½-1.49
5-9 bbls. ...	1.39-1.45	1.41½-1.48

Turpentine Higher And Firmer Tone

Montreal.

TURPENTINE.—The market tone for turpentine is firmer. The reason given for this is anticipated shortage, the primary market tone being steadily firm, and the outlook for supplies for the future being full of uncertainty from transportation considerations, and prospects of labor scarcity in the producing centres. Quotations for turpentine at the time of reporting were given in the expectation of further advances before long, and were as follows:

Turpentine.	Per Imp. gal.
1-5 bbls.	$0.64 to $0.68
5-9 bbls.	0.62 to 0.66

White Lead In Oil Considered Steadier

Montreal.

WHITE LEAD IN OIL.—There are no further changes in white lead in oil to record for the present week, and the opinion held by market watchers as to this product is that a steadier tone may be anticipated. Much depends on the metal market, of course, and the linseed oil market may prove a factor should developments produce changes of importance. But the disposition of the market at time of writing is described as steady. Quotations are as given last week following the decline:—White lead in oil, in 5-ton lots, per 100 lbs., $17.50; in 1-ton lots, per 100 lbs., $17.80; in less than ton lots, per 100 lbs., $18.10. rices f.o.b. Montreal, delivery to December 1st.

Putty Market Is Steady This Week

Montreal.

PUTTY.—No market change is recorded this week for putty, and the outlook is considered steady by those intimate with the market generally. The actual bulk putty might respond to a firmer trend in linseed oil, though opinions are that steadiness is more likely to be maintained for a time now. Putty itself, as will be recalled, has not altered in price for some time, the recent changes being due to cost of containers. This is a factor which may have further effects later, the condition of market for all sheet metal containers, such as iron drums, etc., being very much marked by scarcity and firmness of price. Quotations for putty for the present week are as follows: Standard putty bulk, in barrels, in 5-ton lots, per 100 lbs., $3.25; in 1-ton lots, per 100 lbs., $3.40; in lots of less than a ton, per 100 lbs., $3.60.

Mixed Paint Demand Good; Market Steady

Montreal.

MIXED PAINTS.—There was not very long ago a market tendency that might have meant advances in the cost of mixed paints. This has, however, modified a little of late, and while there is not the least chance of mixed paints being lower in price (as far as indications go at present) the immediate likelihood of advances is not emphasized. Steadiness is the tone indicated at present—steadiness of market as to prices, and plentiful activity as to production. Business in mixed paints is good, and has been so for some time. Fall demand is strong, and most manufacturers of paints are able to report excellent progress in figures of production during the year so far. The outlook for the more distant future is felt by many to be towards firmness, but this may be affected by unforeseen factors in the meantime.

TORONTO

TORONTO, Oct. 4.—There was a firmer tone in the market for turpentine during the week, but weakness was evident in linseed oil. The condition in the former commodity was brought about through higher prices in the primary market while the weakness in linseed oil was occasioned through lower prices on flaxseed. Reports of conditions in the Canadian West are more reassuring and seed has in consequence declined. Glass is of more than passing interest in that the American manufacturers have announced a new price effective October 1 which is considerably higher than recent quotations to Candian trade. One line of paint and varnish remover has been increased in price. As a general thing trade is somewhat quiet in paint lines at present, but one manu-

facturer reports that business is very promising for the fall trade. Glue in certain instances is higher. White lead in oil is holding steady at the recent declines.

Linseed Oil Shows Lower Tendency

Toronto.

LINSEED OIL.—There was a weaker tendency manifest in linseed oil during the week as a result of a decline in the price of flaxseed at Winnipeg. On Saturday of last week cash seed was quoted at $3.23½ per bushel and on Wednesday of the present week had declined to $3.10 per bushel. Favorable reports on the condition of the crop was the dominating factor to send prices lower. As an offset to this oil men point out that the strike of elevator men at Fort William may have the effect of tying up shipments and causing seed to back up, which may affect the market toward firmness. Locally the demand for oil is fair. Quotations were made down to $1.40 per gallon with the range as high as $1.49 in single barrel lots for raw oil.

	Raw, per 9 lbs.	Boiled, per 9 lbs.
1 to 2 bbls.	$1.40-$1.49	$1.43-$1.52
3 to 5 bbls.	1.39- 1.48	1.42- 1.51
6 to 9 bbls.	1.37- 1.46	1.40- 1.49

Turpentine Prices Incline Upward

Toronto.

TURPENTINE.—There was an inclination toward higher prices during the week as a result of the firmer situation in the primary market in Savannah, where higher prices were recorded, an advance of ½c per gallon having been quoted in that quarter during the first of the present week. The range of prices locally is from 66c to 70c per gallon in single barrel lots, which represents an advance of 1c over the high quotations of last week. Demand for turpentine at present is not heavy.

	Imp. gal.
1 barrels	$0.66-$0.70
2 to 4 barrels	0.67- 0.69
5 gallon lots	0.74- 0.88

Favorable Weather For Painting Trade

Toronto.

MIXED PAINTS.—With a stretch of good weather, conditions have been favorable for fall painting and manufacturers in some instances report that it has already had a beneficial effect on sales. In other instances the demand is reported somewhat light, but there is expectation that larger sorting orders may be forthcoming with a continuation of favorable painting conditions well into the month of October.

Higher Glass Prices Announced In U.S.

Toronto.

GLASS, PUTTY. — Local dealers in glass have been advised by manufacturers in the United States that effective October 1 higher prices to the extent of $1.30 per box have been made over the prices formerly quoted to the Canadian trade. While the trade in this centre is still quoting glass at a discount of 50 per cent. off list they are of the opinion that it is only a question of time until higher prices must prevail in conformity with the conditions in the primary markets.

Mirrors are now being sold from the American list which provides for a considerable increase in the narrow sizes.

Putty held in steady market at the advances recorded in last week's issue.

White Lead In Oil Steady At Decline

Toronto.

WHITE LEAD IN OIL.—The market for white lead in oil remained steady at the decline of $1 per hundred recorded last week. As invariably happens a declining market usually causes a cessation of buying until it becomes apparent that the downward movement has been arrested and this has been largely so in the case of white lead in oil. Buying of this commodity within recent weeks has been light. Quotations will be found in current quotations.

Glue Still Higher; Paint Remover Up

Toronto.

GLUE, PAINT REMOVER.—Firmer prices on glue prevailed in certain instances during the week when white pigsfoot was quoted up to 50c per pound. Other glues remained unchanged at recent quotations as given in current quotations. Taxite paint and varnish remover is one of the lines to register a higher price during the week, in gallon cans being quoted at $3 as compared with $2.40 previously.

WEEKLY PAINT DEPARTMENT

(Continued from page 74.)

every year. Does it pay the merchant? All of them answer unanimously in the affirmative. See the man who has given this topic more than passing thought, and he will prove to you that there is a far greater return to the man who gives the window display a fair share of attention. Mention of certain articles in the window is frequently made by the customer. This is the first thing that he will say, where there has been a particular reason for calling for the article. The display has caught his eye, and he is forced to come in for a closer inspection of the merchandise, if not a purchase.

An Agent of Force

Play up the window and its possibilities. Make the window your agent for force, and give it every possible attention. Many lines thus shown are disposed of with a profit that might otherwise become dead stock and be sold in the end at a great loss.

Are you making the window the big publicity feature that it should be made, and are you giving it the same attention that it demands at your hands? Look into your own establishment and see wherein this item of publicity can be made a strong feature. Has it been neglected in the past? It may have been only viewed as a makeshift that has been losing instead of becoming a feature that will and should be the means of making your establishment the most talked of in your city or town.

There is only one kind of a successful window, and that is the kind that sells goods. The two main features of a good window are the "trim" and the "display." The trim is the accessory and to the window what type is to the ad. The display counts just the same as good live copy in the printed announcement. Never allow the trim to overshadow the display. Don't let it even compete with it. The trim should be used only as a sub-part or background, and the failure to hold to this rule will hurt the selling qualities of the display.

THE "IT CAN'T BE DONE" MAN

(Continued from page 57.)

that the experts could produce would be infinitely better than the crazy price structure that the open market developed. We are going to win the war, we are going to train, equip and maintain an army, we are going to build tens of thousands of airplanes, scores of destroyers, millions of tons of shipping, and we are going to fix steel prices and control the manufacture, distribution and consumption. It is all one. It is winning the war. Don't whine. Don't scold. Help to get rid of the "it can't be done" man. The biggest blow you can give him is to refuse to listen. That is the weakest spot in his psychology.

MARKET REPORT

A weekly market report is now being issued by McArthur, Irwin, Ltd., giving quotations on their various products.

INCREASE GASOLINE OUTPUT

The United States Government it is stated, has been offered and accepted the free use of a process discovered by a San Francisco chemist which, it is claimed, will increase the output of the country's gasoline by twelve-fold.

STEEL CITY BUILDING AT OJIBWAY

Canadian Steel Corporation will within a few days commence the construction of one hundred and fifty residences at Ojibway and other accommodation to house the army of workers who will be employed at the Steel City. This work will cost approximately one million dollars, and is apart from the building of a long dock and a canal on the river front below Sandwich. Already railroad tracks and pavements cover the new territory, and preliminary work for the construction of the docks has been under way for the past two months.

MOORE'S

House Colors

Get the Fall Fair to help you sell *Moore's* House Colors

In your booth at the Fall Fair plan to set aside space for a good, snappy display of Moore's House Colors. Put it up to us to supply you with the necessary display cards, color cards, etc. This will not require to be a big display, and it will cost practically nothing.

Make it strong and effective and you'll feel the benefit of it not only this Fall, but next Spring as well.

This Trade Mark in Your Store means a Successful Paint Business

People Look for This Sign when Paint or Varnish is Wanted

The paint that is sold all over the world and is the best known is the paint you should have in stock. This is *SWP*.

Making paint for over fifty years has taught us how to make the best material to meet your customers' requirements. They know this and, therefore, want Sherwin-Williams Paint (Prepared).

SWP is the Paint of highest quality, always uniform, lasts the longest, looks the best, and covers most.

The S-W Agency not only increases your Paint and Varnish sales but helps you to sell the other lines you have in stock.

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

MARTIN-SENOUR
PAINTS AND VARNISHES
Will Increase Your Paint Business

Some Martin-Senour Helps

National Advertising that is read by every possible paint purchaser in the Dominion.

Newspaper Advertising in local newspapers over our Dealer-Agent's name, creating a demand for Martin-Senour products that is directed right to your store.

Window Displays that are up-to-date and that will attract customers.

Ripe Plum Sales Letter Service—These are follow-up letters that are sent to all prospects furnished us by our Dealer-Agents, and are strong, convincing letters that will sell paint for you.

Booklets—We print a series of illustrated booklets on our various products, explaining their advantages and uses. These are furnished to our Dealer-Agents for distribution free of charge.

These and many other interesting features can be made to work for you if you will.

RIGHT NOW IS THE TIME TO WRITE US

Sending us your name does not obligate you to buy but indicates a willingness to be shown. Martin-Senour Policy is to sell **FOR** the dealer-agent.

If you are stocking paint that stays on the shelf it will never make profits for you.

Martin-Senour selling plans will keep the paint stock moving.

OUR GUARANTEE

We guarantee Martin-Senour 100% Pure Paint (except inside white and a few dark shades that cannot be prepared from lead and zinc), to be made from pure white lead, pure oxide of zinc, with coloring matter in proportionate quantities necessary to make their respective shades and tints, with pure linseed oil and turpentine dryer, and to be entirely free from water, benzine, whiting and other adulterations, and sold subject to chemical analysis.

This guarantee is a strong factor in making sales. It protects both the dealer-agent and his customer.

Write us now for our Dealer-Agency proposition. We can interest you.

The Businessman's Mind

BANKERS are supposed to have a particular character of mind; Lawyers and Doctors likewise; Teachers also. These minds have both narrowness and breadth. They see widely and deeply in their own realms, and narrowly and sometimes shallowly in regard to matters outside their particular worlds. At least, this is the common supposition.

THE Businessman — What should be the character of this mind? — What is the mind of the Manufacturer, the Wholesaler, the Retailer? Certainly the Businessman's mind should be broad. It should be something of the Banker's, something of the Financier's, something of the Statesman's. The Businessman should see broadly. The horizon of interest and of inquiry for him should be a far one.

The happy thing about it is that the business man—manufacturer, jobber, retailer—can have the far outlook—this by the reading each week of a newspaper with a far outlook—

The Financial Post
OF CANADA

This is a business man's paper—it is a paper for bankers, for investors, for trustees, for financial men. But it is also a newspaper for **merchants,** very much so.

Merchants need to know markets and market tendencies and market factors. They need to know conditions, local and remote. They need information to buy right and to sell safely.

And the knowledge they need they can have for the insignificant sum of $3 annually.

THE FINANCIAL POST is a most readable paper—positively enjoyable to the layman reader. It makes any man broader minded, and every business man a better business man. Growth in bigness at $3.00 a year!

Send for free sample copy to the Publishers, or sign and mail attached coupon.

THE FINANCIAL POST OF CANADA 1917
143-153 University Avenue, Toronto.

Please enter me as a regular subscriber, commencing at once. If I am satisfied with the paper I will remit $3.00 to pay for my subscription on receipt of bill.

Yes! it does pay to sell "DELTA" FILES

Dealers find that the co-operation we give them makes files sales easy and helps to bring new business to their stores.

DELTA FILES once sold to a customer establish a permanent good-will—the Extra Durability and Lasting Cutting Edge of these files prove of great advantage to the user, cutting down file expenses.

The dealer who sells his customers *Delta Files* establishes a good-will toward his store that brings the customer back for other articles. Thus do these files help to establish pleasing relationship between the dealer and his customers.

Let us send you full particulars of our agency proposition and our co-operative helps.

PEERLESS ORNAMENTAL FENCING
A Big Trade Is Waiting for You.
YOUR business will jump to the front the minute you display Peerless Fencing. In price, quality, designs and actual worth you can guarantee every foot of it. We stand back of you.
Open hearth steel wire, crimped springy horizontal wires combine to make the Peerless fence outlast ordinary kinds of fencing. Defies rust, holds unruly animals, can't sag, can't break down and is the last word in economy.

PROGRESS AND SUCCESS

The alert, wide-awake hardware dealer—the one who knows what products are being widely advertised and for which there is a ready demand—finds his greatest help in the dealer trade papers. Are you in his class? Do you follow the trend of the times or do you lag along, satisfied with a small business kept alive by occasional sales of unknown products?

In the hardware business two things are primarily needed for successful growth: Stocking products that have a ready sale. Selling products that give a liberal profit.

Both these advantages are found in Laco Nitro Lamps. The big advertising campaign we are now running in all the leading trade papers of Canada is telling operators, factory owners, superintendents, foremen and mill and shop owners the superior qualities of this improved tungsten lamp.

LACO NITRO LAMP "The Light that gives More Light"

is being sold in larger quantities this year than ever before. The reason is easily understood.

The LACO NITRO LAMP is the greatest development of the tungsten electric bulb. It has a tungsten filament suspended in a nitrogen gas filled bulb. It gives a greater light for given power and has longer "life" than any other type of lamp.

You want to get the big profits from these easy sales, created by our advertising campaigns. Put in a stock of bulbs to-day. All sizes from 60 to 1,000 candle-power and large supplies are available at warehouses in Canada.

HOYT METALS

MEMO
OCTOBER 6th

for your Babbitt Metal file

Selecting Raw Materials

Of paramount importance in the manufacture of metal alloys is the selection of the raw materials used.

This has always been a Hoyt strong point.

Our splendid buying connections gives us the world to select from and enables us to not only select the best, but to get the best possible price.

What this means to you as a user or seller of Hoyt metals cannot be over-estimated. It means, to say the least—right goods at right prices—alloys that stand the test.

HOYT METAL CO., Toronto

NEW YORK, N.Y. LONDON, ENG. ST. LOUIS, MO.

Wanted

SITUATIONS VACANT

WANTED.—RETAIL HARDWARE SALESMEN with 5 or more years' experience. Apply to Mills Hardware Co., Hamilton, giving age, salary and experience.

WANTED, AT ONCE—CAPABLE MAN TO act as head clerk in hardware store in city of 25,000 inhabitants in western Ontario. State experience, salary expected, and give references. Box 493, Hardware and Metal.

FOR SALE

THREE-DRAWER NATIONAL CASH REGISter for sale—good as new, $375.00. Address Box 74, Odessa, Saskatchewan.

ORDINARY CANADA PLATE, ENGLISH make—25 cases 18" x 24", $13.00 per case. Duncan Munn, Ripley, Ont.

FOR SALE, CHEAP—900 LBS. OF ¼" ROUND cold rolled steel at $6.50 cwt. Also 8,000 lbs. of 24-gauge large strip steel triangles at $2.00 cwt. Perfection Stove Co., Ltd., Sarnia, Ont.

FOR SALE—WELL ESTABLISHED HARDware, tinware and plumbing business in good Ontario farming district. Stock in good condition. Apply Box 488, Hardware and Metal.

OVERSTOCKED IN GUNS.

WE HAVE AN OVERSTOCK OF THE FOLlowing guns which we can offer at very attractive prices:—No. 1—12-gauge, L.P.G., D.B. guns, 30" barrel; No. 1—28-gauge L.P.G., D.B. guns, 28" barrel; No. 1½—12-gauge L.P.G., D.B. guns, 30" barrel; No. 2—12-gauge L.P.G., D.B. guns, 30" barrel; No. 5¾—12-gauge, L.P.G., D.B. guns, 30" barrel; No. 10—44-gauge L.P.G., D.B. guns, 26" barrel. If interested, write us for prices. The Tourtellot Hardware Co., Limited, Port Arthur, Ont.

WANTED

WANTED—A GOOD SECOND-HAND HOTEL range; one fire, two ovens, one pot hole. State maker and price at once. W. G. Butler Perth, Ont.

WANTED TO BUY—GOOD, LIVE ONTARIO hardware business, or would take interest in live business and assume management if owner wished to retire from active duties. Address Box 494, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITERS WRITE ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!

The Lamp that threw the Alcohol Torch into the discard.

Here is how it is lighted

This lamp will sell quickly because of its great convenience and economy. Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power. *Safety*—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton or Vancouver and cover yourself for Fall and Winter requirements.

A Westclox Alarm

Achievement

TO attain a high place in an important industry brings both honor and responsibility.

Every thousand clocks that are added to the Western Clock Company's annual output increase the makers' obligation to the public.

Quality cannot be sacrificed for one moment. The public's trust is a fickle element to be reckoned with. Always, it must be safeguarded.

And as the magnitude of Westclox achievement becomes greater and greater, the Company's trade symbol —A Westclox Alarm— takes on greater and greater responsibility.

Always, it must speak truthfully. Always, it must identify the best the maker can give at the price asked.

Always, it must be a faithful pledge of Westclox quality.

What Blade Does He Use?

A mechanic enters your store with a requisition slip.

"I want a gross of 12-inch hack saws," says he.

You have 12-inch blades for two dozen purposes, what are you going to give him? And when you do find out what material he is going to cut is it easy to choose the blade that will cut best? It is if you choose from

Starrett Hack Saws

They are standardized. From the information on page 208 of the Starrett Catalog you can quickly supply the blades that cut best.

Whether the mechanic across the counter wants to cut sheet metal or cast iron, brass or tool steel you can give him the finely tempered tungsten steel blade with teeth carefully milled, set and spaced to cut most in the shortest time.

A post card brings a catalog describing the saws that cut faster and last longer. Ask for Catalog No. 21MA.

LITTLE WORDS WITH BIG MEANING

Quality

According to "Webster," Quality is "an excellence of character; natural superiority."

Service

Webster's definition of "Service" is; "The performance of labor for the benefit of another."

We use these words advisedly—fully understanding their definitions—and realizing the obligation we place upon ourselves by their continued use in connection with our products of Iron and Steel, and our attitude to the people we serve.

ONEIDA COMMUNITY
An Institution and Its Achievement

Seventy years ago the first Oneida Community Game Trap was forged out with hammer and anvil on the banks of the Oneida Creek — a portion of the then recently opened Indian Reservation.

Crude and clumsy as these old traps of the 40's and 50's look today, they were at that time far in advance of any trapping device obtainable. The springs were faster, stronger and more powerful; the jaws far more rugged and dependable.

Today thousands of trappers in every section of the world start out on the trap line equipped with Oneida Community Game Traps — knowing from actual experience that the Victor, Newhouse, Oneida Jump and Hawley & Norton can be depended upon under every trapping condition.

This confidence of trappers everywhere in Oneida Community Game Traps and the growth of this organization from a hand-forge shop to the largest game trap plant in the world are the result of unremitting care, invention, testing, inspection — making *every trap perfect* in every detail, and above all the *spring*.

There is scarcely a trapper anywhere in the world but knows and uses Oneida Community Game Traps. The great Hudson's Bay Company has used them exclusively for sixty years and hardware dealers everywhere rate these traps as one of their staple and growing specialties.

1200 Foreign Buyers

Hardware and Metal's next Export Number will be issued on November 3.

In addition to covering our large subscription list in Canada, we will mail 1200 extra copies to a select list of buyers in foreign lands.

These buyers have, behind them, the purchasing power of many millions of dollars.

Many foreign buyers are already doing business with Canadian manufacturers, as a result of advertising which has appeared in previous issues of Hardware and Metal.

To the Canadian manufacturer who wishes to extend his trade connections to foreign countries, the export numbers of Hardware and Metal present a real opportunity to get in touch with foreign buyers at a minimum of cost. Regular advertisers can use space in the Export Number, pro rata on contract. Those who are not regular advertisers can reserve space at a cost of $45 per full page or $25 for a half page. Reservations for space should be made at once, as forms for the Export Section will close early. Address instructions to

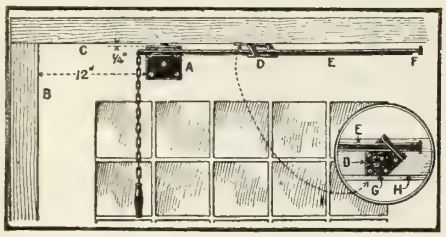
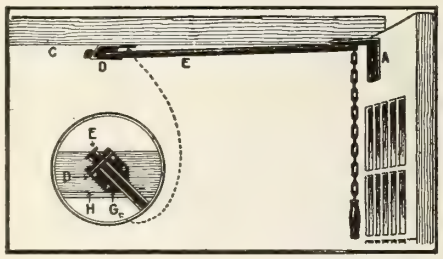
Strength is a feature of this holder which is of particularly rigid construction. The attaching plates are a considerable distance from the hinges, thus producing a minimum of strain. The holder is reversible and **may be applied to all kinds of doors.**

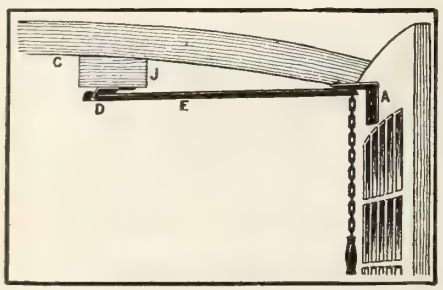
The Construction and Operation of Stanley Garage Door Holder No. 1774



For inside face of Straight Top Door. The pivot plate A clears the lintel C by a fraction of an inch and is 12 inches from the jamb B. As the door is opened the holder bar E slides through slotted plate D.



When the door has been opened to a little more than a right angle the notch F in the holder bar E engages. The diagonal edge G of slotted plate D is even with rabbet H. A pull on the chain throws the notched bar out of engagement and permits the door to be closed.



If the door has a Curved Top a wedge-shaped block of wood J is fastened onto the lintel C, before attaching the slotted plate D. This is done so that the holder bar E is **horizontal** always and can slide through slotted plate D without jamming or binding.

MADE of a superior grade of wrought steel of substantial construction, and so simple that there is nothing to get out of order, this STANLEY Garage Door Holder is **needed by every garage owner and builder!**

Hard service and strong winds have no effect on it. It continues to protect the car and its occupants year in and year out.

New garages are being built; old ones require additional equipment. Every garage owner or builder who enters your store is a splendid prospect.

The STANLEY Garage Door Holder almost sells on sight. It is especially designed for its purpose, and is now proving invaluable in thousands of garages throughout the country. **It nets you a good profit and you should have it in stock.**

To-day write for catalog and prices on STANLEY Garage Hardware.

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 29 TORONTO, OCTOBER 13, 1917 No. 41

Various Methods of Getting the Dollar

Starting the Dollar Towards the Store—Working the Telephone Pole—Flowers in a Hardware Store—Furnishing Standard Time and the "Probs"—The Rest Room, Just What the Name Suggests—Catering to the Women—Light and Scenery Excellent—The Store Itself—Newspaper Advertising.

IN remodelling their store after the big fire a year ago, Carter Bros. of Picton, Ont., had in mind serving their customers well in addition to making dividends for themselves.

"Serve the customer well and the dollar is sure to come" is how W. J. Carter expressed himself in this respect. "That is what led to our installing our battery of self-measuring pumps, to our planning a rest room for the ladies, to having a drinking fountain, to giving the standard time and the weather probabilities. These features are all links in a chain of service which we are constantly trying to improve.

"And the women, don't overlook how strongly we have made the appeal to them. They are the big factors in the spending of money and catering to them has been one of our hobbies which has brought in real dollars and cents in return."

Starting the Dollar Towards the Store—Effective Means Used To Attract Attention

Bringing in real dollars every time we cross the sidewalk in front of our store—that's what we're doing since we installed the gasolene self-measuring pump right at the curb, is how W. J. Carter of Carter Bros., Picton, Ont., expressed himself to HARDWARE AND METAL'S representative on his visit to their store during the week. Mr. Carter continued, "not only are new customers drawn by this attractive pump but many of our old customers who went to the garage for gas, now drive up to the front of our store for their supplies, including lubricating oils and greases and accessories."

Making Use of the Telephone Pole

But the gasolene pump is by no means the only attractive feature that greets the eye. About 10 feet from the gasolene pump is a telephone pole which presents, in its natural state, a most unsightly appearance. However, four panels, artistically painted and listing the special goods which this store features, are arranged on the square around the pole. These panels hook to the pole and can be removed or rearranged at a moment's notice. Besides being a splendid method of keeping the store specials before the people, this form of advertising adds a novel feature to a thoroughly attractive store front.

Flowers in a Hardware Store

The store entrance is set back about seven feet from the street line and across the top of the entrance, in line with the street, were hanging pots with geraniums and creeping plants in same.

Showing the Gasoline Pump which stands at the curb in front of Carter Bros. store at Picton, Ont. The picture also shows the showcase which occupies space outside, as well as the clock which gives the Standard Time. In the glass panel below the clock, the weather probabilities are posted each day.

Draped from the ceiling of the entrance were two beautiful hammocks—the effect was certainly excellent—and appealed in great measure to the women who form a large proportion of the trade of this store. The idea of flowers was extended to the inside of the store and women were always attracted to a special display of enamel or aluminum ware by a bowl of beautiful fresh flowers in its midst.

Furnishing Standard Time and the "Probs"

Before speaking of the windows which are really excellent, attention might be drawn to a large clock in the centre of the store front, giving the standard time. This is regulated to the second and referred to by hundreds of passers-by. Below the clock the weather probabilities for the day are given—these are read by seventy-five per cent. of the people passing the store. This information the public likes to have and the method in this as in the display of flowers, etc., is to attract attention to the windows and goods shown in showcase.

The Show Case Out of Doors

Turning to the actual display of goods attention is immediately drawn to a showcase which stands directly in the centre of the store frontage between the two entrance doors. Seasonable lines are always on display in this case, a change or re-arrangement of goods being made every week or ten days.

The window displays are timely. Bright, snappy cards are utilized and prices prominently displayed. At the western side of the store the street line breaks towards the curb about 30 inches. This has suggested the use of one small, special window, which absolutely compels attention from those going towards the west. It is used for small lines such as razors, flashlights, etc., and has drawn an exceptional amount of business. Altogether the store front is one that makes people stop to look and is practical in every way.

Interior view of Carter Bros.' store, showing the right-hand side. In the foreground are shown two silent salesmen, back of which the counter display cases, with the office in the rear. The Paint Department is shown along the side.

The Rest Room—Just What the Name Suggests

On entering the store there were many things to take the attention, but there was one objective to which the writer was immediately taken and it had nothing to do with the actual sale of hardware. This was the Rest Room, and its dainty decorations, its cosy furniture must certainly appeal very strongly to the country people after driving miles into town. It is becoming well known and advertising now contemplated will introduce it to those others not yet conversant with its distinct advantages.

Women a Big Trade Factor

Believing that the women buy or influence the buying of the majority of lines, the store has been fitted out to appeal largely to them and there is no doubt but that it will be the meeting place of a large majority while in town.

The house furnishings department through which the women must pass in going to the Rest Room contains an excellent display of stoves, ranges and heaters on each side of the passageway. Another thing observed with this display was a furnace—already set up and containing a fire from which the comfortable heat radiating from its large surface should bring cheer to those who have been exposed to the elements of winter. Besides supplying extra heat, this furnace, so prominently featured, should result in bringing increasing enquiries and sales for this particular brand.

Of more than passing interest was the question of light. In that this essential was plentiful. The windows extend practically across the back of the store and apart from their value in supplying light, the scenery which greets the eye is magnificent. The view across the valley to the mountain back of the town is visible from the rest room as well, and is one which will never tire the eyes of those to whom nature's wonders are ever increasing.

Above the office, which is located in the centre of the store, a skylight of good dimensions has been placed which brightens the central portion of the store wonderfully.

There are large windows above the regular store display windows which throw light from the front of the store, in addition to what comes through the nearly entire glass frontage between the doors.

Interior Store Arrangement Excellent—Furnishings Neat and Distinctive

In mentioning the interior store arrangement, the fittings which dress up the store might be dwelt on first. One's attention is drawn to the paper racks or holders—built in solid mission style and presenting such a solid appearance standing on the floor. These are shown in the accompanying illustrations and are a decided improvement over many styles in common use.

To match the style and design of these paper racks, a water filter has been built which stands just inside the entrance to the door and furnishes relief to many thirsty individuals during the course of a day. This is particularly noticeable in the warm weather, when the filter is often filled three and four times during the day.

Silent Salesmen Used Extensively

Standing just inside the entrance facing towards the rear of the store, one is immediately struck with the extensive use of silent salesmen, five being placed conveniently and in plain view of all those entering the store. Two are placed crossways and the other three ranged along the left hand side act as salesmen's counters for goods from the shelving and drawers along that portion of the wall.

In the first salesmen running crossways to the store are displayed nickel plated goods, such as tea and coffee pots, the space below the glass on top being utilized to display razors, razor strops and shaving accessories. The second salesman contains, besides carvers in cases, a nice assortment of nickel plated flat ware.

Flashlights Strongly Featured — One Show Case Devoted to Their Display

The first two cases at the side of the store are used for nickel plated ware with pocket cutlery on top, and flashlights with scissors carefully arranged above. And right here, Mr. Carter waxed enthusiastic over flashlights, on which he has worked up an exceptionally big trade. The front of one whole case is devoted to a display of this line and even while the writer was in the store, several sales were effected for the flashlights complete. Extra batteries and bulbs which gave every confirmation

to the reason for Mr. Carter's enthusiasm.

The third showcase along this side of the store is placed next to the cash register and always carries a display of seasonable lines. The top of the showcase, instead of being glass, is wooden and permits of axes or other heavy lines being attractively displayed.

Glass Front Wall Case and Drawers With Goods Sampled on Fronts Cover One Entire Side

Covering the wall at the left hand side of the store is a large wall case with sliding glass panels at the front, continuing from which to the back of this department is shelving holding drawers, on the fronts of which samples of the goods contained therein are shown. This results in a most satisfactory display of the many small lines of shelf hardware and the bigger lines such as hammers, hatchets, draw-knives, wrenches, etc., are in full view in the wall case. The wall case is also utilized to display a good assortment of guns and rifles, which being in full view all the time move with some degree of freedom at all seasons of the year.

The wall case and shelving stand about 3 feet off the floor, the space below being utilized for reserve stock. The wooden counters which occupy the back half of the shelf hardware department are also supplied with bins in which a stock of nails, etc., is carried.

New Style in Display Tables

In the centre of the store, there are two display tables, on which are shown small five to twenty-five cent lines. The top of the table is inclined so that all lines are visible, the various items being placed in special receptacles which are firmly secured to the table. The fronts and sides of these special tables are built in solid to the floor and shelving is built in the space thus enclosed which gives a large amount of space for reserve stock. Sliding doors along the back of the table, as now arranged, keep dust and dirt from accumulating on this stock.

Blue Prints Help in Planning Paint Section

The paint section is always one of the hardest in the whole store to arrange. Over half of the right hand wall of the store is devoted to shelving containing a complete line of paints. This shelving was built from blue prints which the manufacturer, whose brand Carter Bros. handle, furnished and are certainly a model in completeness. The shelving is very deep and when filled to capacity contains a very big stock of all finishes and sizes.

Sale of Automobile Accessories on the Increase

Between the paint section and the office are two more glass front wall cases, one of which has been used largely for displaying automobile accessories during the past summer. In addition to the space thus devoted to this line, the show case at the front of the store, outside, carried a display of automobile accessories which caught the attention of the passer-by, or the automobilist who was at the curb having his car filled with gasoline. This outside case has been the direct cause of many sales for these goods and contributed largely towards establishing Carter Bros. store as a headquarters for this class of goods.

Utilizing the Pillars Which Support the Ceiling

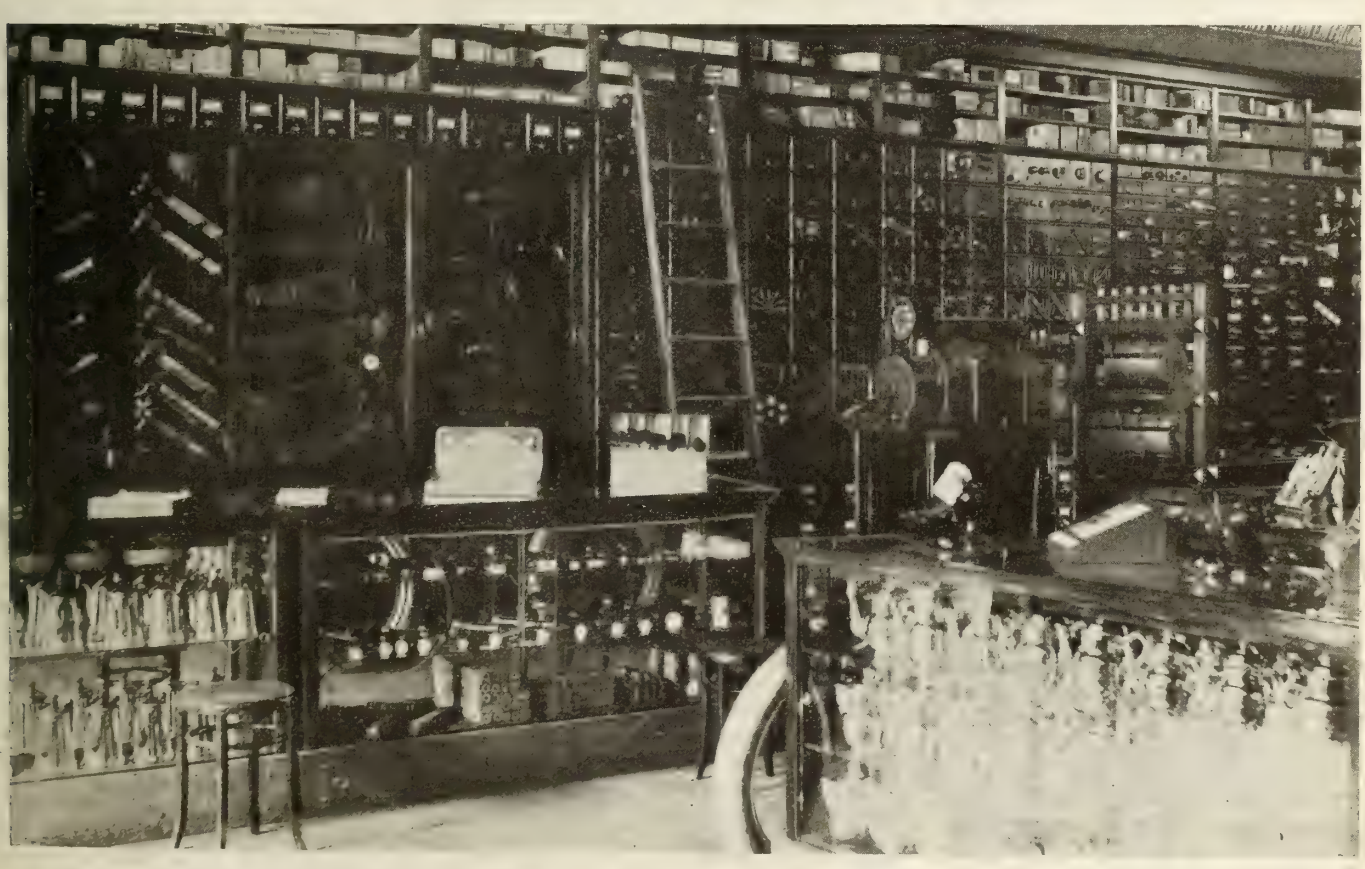
There are three pillars which support the ceiling, somewhat towards the right hand side of the store, around each of which there are three rows of shelving arranged in pyramid style to a height of about 48 inches and with about a 24-inch mirror on each side at the top. These make excellent display stands and occupy little extra space. The displays are rearranged every two or three weeks and always present a fresh, changed appearance.

Light, Cheery Office Produces Better Work

It is not necessary to work under the electric light in the office which extends half way across the rear of the front section of the store, at the entrance to the house furnishings department. It is situated under the skylight mentioned above and even on the darkest days, all available light is thrown on the desk. The invoices, quotations and copies of orders are kept on separate files in the vault, being at all times available when it is necessary to refer to them.

Stove, Tin and Agate Ware Department

This is the heading which directs the way to the house furnishings and here



Showing the left-hand side of the store with the large wall case for guns and saws, hammers, etc., continuing from which the drawers with the samples of shelf hardware continue to the rear of the store. The two showcases are shown in addition to cash register and paper rack.

The entrance to the House Furnishing Department is brought out clearly here. A very fair view of one of the paper racks is shown immediately to the left in the foreground. The stove at the entrance to the Stove, Tin and Agateware Department stands out clearly in the picture.

the goods are attractively arranged to appeal to the women. Facing the front, in full view from nearly all points in the store, stands one of the latest models in stove building. This range with its clean cut, attractive lines draws attention which must be remembered when one thinks of buying. The entrance to this department, with the position of the stove are well illustrated in the picture herewith.

From this striking appeal on entering this department, one is led past a complete showing of stoves, ranges and heaters at the end of which is the ladies' rest room, mentioned above. Attention was centered also in the furnace being operated right on the floor and the results obtained should be excellent.

Special Counter for Glass and "Messy" Things

The glass board where all glass is cut, is located near the back of the store, where the light is good. A little chute is being built leading outside where all refuse including broken pieces of glass will be thrown, thus eliminating this unsightly "mess" from the eyes of the customers. It might be mentioned here, too, that all lines such as oil cake, lime, hen feed and oyster shell have been moved to the back where the untidy appearance from any spilled in weighing out will not be so noticeable.

Reserve Stock in Room Built Over Stairway

Over one of the stairways leading to the cellar a very good size stock room has been built in which reserve stocks of bolts and nuts, screws, etc., are kept. This is a most convenient arrangement and uses space which otherwise would be wasted.

Convenience Evident Throughout Entire Store

To serve their customers in the shortest possible time consistent with that personal element so necessary in the retail trade, Carter Bros. have included money, time and labor-saving devices, one or two of which might be mentioned.

The utility of self-measuring pumps is quite evident to the average retailer and the battery of pumps shown herewith covers the field quite thoroughly. Back of these pumps, 5-gallon cans painted red and stencilled contain the many special lines of oils on which the demand is light, but which call for service in handling.

A harvest tool rack holds a complete assortment of forks, shovels, spades, fork handles, etc., and occupies a comparatively small space. Besides effecting a great economy in floor room, this rack displays the goods well and makes the selection of lines wanted by their customers quite easy.

The difficulty often experienced in keeping mower knife sections in their proper place has been overcome by the use of a large board, through which steel pins have been driven to suit the many types of sections. A card with the name and style of each is tacked to the board and there is no danger of sections becoming mixed as each must fit over the proper pins.

A large whip rack stands on the floor at the side of the office and besides displaying these effectively, there is a shelf below which can be used for featuring horse brushes, curry combs, lanterns or any other small lines.

In connection with the gasoline tank which is under the sidewalk, instead of burying this a vault was built which enables inspection to be made at any time for leakage.

Lavatories are supplied for both men and women, the latter being off the rest room. The entrance to the men's is shielded by shelving, which is used to hold a reserve stock of kalsomine.

Newspaper Space Used Freely—Not Confined to Only One Place

On the front page of the two local papers the main store announcement is given in a space 2 columns wide by 6 inches deep. Over the news of local interest, a one column ad 4 inches deep is also inserted and then there is an entire column of "Picton Pointers" used by Carter Bros. and one of the local grocers to feature special goods or announce the arrival of certain seasonable lines. Mr. Carter is a firm believer in printer's ink and even uses it to keep the nickel polished on their scales—he claims there is nothing better to polish with every morning than a little piece of newspaper.

Price lists adopted by the Ontario Re-

tail Hardware and Stove Dealers' Association have been framed and are hung in the most convenient place for the line of goods to which they apply. Mr. Carter states they are a great convenience.

This battery of pumps results in a great saving of time and "mess" in handling. The pumps are situated on the left-hand side of the store, just at the entrance to the House Furnishings Department. The use to which some of the bins beneath the drawers are put is clearly shown.

Will Steel Men Observe Agreement?

United States Authority Points Out Possibility That Some Manufacturers May Not Live Strictly up to Agreement—Recent Developments.

ACCORDING to the "American Metal Market," a United States authority, there is unfortunately a possibility that some manufacturers in the iron and steel industry may not observe strictly the agreement that has been entered into. This agreement is in substance that prices throughout the industry shall be on a basis in harmony with the schedule announced on September 24, which set Lake Superior iron ore at the 1917 season basis, pig iron on the basis of $33 for foundry, malleable and basic at valley furnaces, steel bars at $2.90, structural shapes at $3.00 and plates at $3.25. Prices in detail are to be arrived at as rapidly as possible. There is no reason to suppose they will be disproportionately low. Thus the agreement will cover all these prices.

The leading steel manufacturers pledged the honor of the trade to observe this agreement. If it is violated by some it means that these manufacturers made a mistake, that they pledged something that did not exist. That they made a mistake may not interest recalcitrants, if there are any, but it should interest them to realize that the Government will not wink at irregularities. The Government made a bargain, and part of that bargain involved its paying higher prices for its steel than it had contemplated paying, or needs to pay under the law authorizing it to fix prices on its purchases and to commandeer plants whose owners do not accept the order. The Government requires something in return and it is absurd to assume that it will not secure what it is entitled to.

Developments of the past ten days indicate the decided probability that the Pomerene bill as reconstructed by the Federal Trade Commission will be passed early in the regular session of Congress which convenes December 4. It is believed the bill is now so framed that it gives the authorities full power to fix prices on all purchases of iron and steel commodities, and avoids the danger of unconstitutionality.

The bill will probably be passed no matter what occurs in the steel market meanwhile. The question is whether the Administration will be forced to have recourse to the powers it grants. That rests upon the conduct of the steel trade. As to the conduct of the great majority there is no doubt whatever. As to the conduct of a small minority some things have occurred to raise a doubt. We sincerely hope appearances have been deceptive, that the doubts are unfounded but it is necessary to face all possibilities squarely.

Violation of the agreement would mean enforcement of the Pomerene bill when enacted and that would be a very great misfortune for everyone. The steel market can be conducted very much better by agreement, by intelligent control largely in the hands of the producers themselves, than by the rigid operation of law in circumstances necessarily so complicated. Surely no one will be willing, with the facts before him, thus to betray the industry.

The Administration, moreover, is not without power even though the prospective legislation has not been enacted. It has the power to commandeer plants and use them for the production of material it requires. It can select whatever plant or plants it chooses, and there is no doubt what plants it would select.

There is also the operation of the Priority Board, which undertakes to determine the sequence in which orders are filled, and to regulate freight movement to and from a manufacturing plant. In its operation the Priority Board can deal with recalcitrants. The only question would be as to its legal authority. One cannot imagine a recalcitrant in the matter of observing the fixed maximum prices taking the Priority Board into court.

The steel agreement states the American Metal must be observed in both spirit and letter.

Steel men have received their instructions on priority in orders, and twenty-five thousand circulars, giving instructions as to priority in orders and work for all individuals and firms engaged in the production of iron and steel and in the manufacture of articles and implements therefrom, have been sent to manufacturers in all parts of the United States.

The War Industries Board has divided industry into three classes, directing that preference in transportation of iron and steel and their products be given to them in the order of their importance as related to the conduct of the war. Class A, comprising war work, comes first; Class B, comprising industries indirectly related to the war, second; and Class C, comprising all other industries, last.

War orders of the Allies will be placed in Class A, as will those of the United States. Contracts already placed by the War or Navy Departments or by the Emergency Fleet Corporation will be placed in subdivision A1. Orders already placed by the Allies will be put in A2. Orders and work in Class A will take precedence irrespective of the date the orders are given. Both Classes A and B will be divided into subdivisions, as A1, A2, A3, A4, etc., each comprising orders within its class which are regarded respectively as of greater moment. All materials required in the manufac-

ture of an article will be classed with the article itself.

Certificates will be issued on application specifying the classification of the work. Certificates of a subsidiary nature will be issued on request for the furnishing of material and articles required in the manufacture of the commodity ordered. Applications for Class A certificates will be made by the contracting officer of the United States department making the purchase and in the case of the Allies by their agents. Applications for subsidiary certificates covering materials for Class A work will be made by the producer. Applications for Class B certificates will be made by purchasers, as will subsidiary certificates in Class B.

ALCOHOL MADE FROM WASTE AND SAWDUST

Ton of City Garbage Makes Nearly Five Gallons at Profit of $2.40

Ethyl alcohol, or grain alcohol, as it is usually called in Canada, has, hitherto, been chiefly manufactured from molasses and corn in North America and from potatoes in Europe. The molasses has had to be imported from Cuba and Porta Rico. Owing to the present high freight rates, it is more profitable to burn the molasses on the spot in order to recover the potash. A plant with a capacity of 100 gallons of alcohol per day would use the following: 200 gallons of molasses, or one ton of shelled corn, or 4 tons of potatoes, or 6 tons of wood waste.

The use of sawdust is very much cheaper than grain or molasses and does not involve the consumption of valuable raw material.

In 1912, a North Carolina plant produced 310,000 Imperial gallons of 95 per cent. alcohol from the equivalent of 35,000 cords of pine sawdust and waste and, since 1914, has increased its production.

The sawdust is "digested" with sulphuric acid, the soluble constituents are extracted with hot water and, after neutralization with milk of lime and clarification, are pumped into fermenting vats. Yeast grown in wood liquor is added and, after fermentation, the fermented liquor is distilled.

In three paper mills in Sweden, the utilization of the sulphite liquor produced about 1,250,000 gallons of alcohol per annum. Two plants have been established in the United States and produce 15 gallons of 95 per cent. alcohol per ton of sulphite pulp. It is estimated that a plant with a capacity of 2,500 to 3,000 gallons of alcohol per day, and operating under favorable conditions, could produce at a cost of 14 to 20 cents per gallon.

A municipal plant at Columbus, Ohio (population 182,000), is manufacturing alcohol from city refuse. The grease extracted from the refuse is cooked with sulphuric acid and steam, the acid is neutralized, the liquor fermented with yeast and the alcohol is recovered by distillation.

One ton of Columbus "green garbage" yields 4.8 gallons of 95 per cent. alcohol and it is estimated that a plant costing $36,000 would treat 20,000 tons of refuse annually and produce 80,000 Imperial gallons of alcohol, giving a profit of 50 cents a gallon at war-time prices, or 37 cents under normal conditions. Thus, one year's refuse would yield as much alcohol as could be produced from 33,600 bushels of shelled corn, 39,500 bushels of wheat or 110,350 bushels of potatoes.

RETURNS TO THE EUREKA COMPANY

R. Rutledge, Formerly Associated With the Eureka Refrigerator Company, Again Associates With That Company as Sales Manager

R. Rutledge, who has been well known to the trade for a good many years past as associated with the Eureka Refrigerator Company, and who left that company a couple of years ago, to help found the W. A. Freeman Refrigerator Company of Hamilton, and to have charge of their refrigerating and equipment department, is once more back with his old Company, as Assistant Manager and Sales Manager, with headquarters in Toronto.

Mr. Rutledge was associated with this company for many years, past and was indeed among the charter members of the company. The elder members of the firm have since left and Mr. Rutledge, now is the oldest experienced practical refrigerator man in the company. As the patentee of several important inventions having to do with the refrigerating systems, Mr. Rutledge has made no small name for himself among those who are conversant with the best that there is in refrigerating work. The wide circle of business friends that he made while formerly associated with this company, will welcome him back with a great deal of pleasure.

THE REGULAR CHAP

By G. M. Wall, of the Kenneog & McDonald Co., Antigonish, N.S.

(With apologies to Walt Mason)

There is a chap whom we all love, whose name is writ in gold above, whose fame will ne'er grow dim. To him we kowtow on the street. His welcome face we haste to greet whene'er we meet with him. He is no bloated millionaire. He wears no diamonds in his hair, nor rubies on his shoes. Yet we would sit up late at night and go for weeks without a bite ere we'd his friendship lose. Though we be weary, sick and sore whene'er he seeks our office door with joy our bosom thrills. We cease to moan o'er past mishap. Of troubles dire we cease to yap and rush to greet this REGULAR CHAP, this CHAP WHO PAYS HIS BILLS.

THOROLD MERCHANTS WILL CLOSE WEDNESDAY AFTERNOON THROUGHOUT YEAR

At a recent meeting of the merchants of the town of Thorold, the question of opening again on Wednesday afternoon for the winter months was discussed. It was practically unanimously decided not to do so, and as a result the grocery and butcher stores will be closed every Wednesday afternoon during the year, with the exception of two or three weeks just previous to the Christmas season.

MINIMIZING INCONVENIENCE TO CAN. MANUFACTURERS

In order that Canadian manufacturers may not be unduly inconvenienced by the export restrictions that have been placed by the United States Government on forty or more different products, except where intended for war purposes, the Canadian Manufacturers' Association is taking a census of all manufacturers in Canada who will be directly affected by the regulations. The products on the list placed under the ban for export to Canada include wheat, wheat flour, etc. The following questions are being asked:

(1) Are you employing any raw materials as specified above, imported from the United States?

(2) If so, please name those articles of your manufactory which are not for war purposes, or directly contributory thereto, into the manufacture of which the above named raw materials are used; and.

(3) Which of said raw materials you use, and what quantity, annually?

(4) If said United States export restrictions are not removed, what effect will such embargo have on your industry?

(a) As to number of employees who would be thrown out of employment;

(b) As to closing your plant.

DUTCH GLASS INDUSTRY MAY BE SUSPENDED

Complete stoppage of the Netherlands glass industry is threatened. The Government coal distribution bureau has informed the factories that no more coal tar can be supplied; in consequence, at least some of the ovens must cease working very soon. This is in addition to the general shortage of the coal supply, which threatens every industry in the country.

Glass has been made in Holland for several centuries. Exquisite samples of early handmade glass are still preserved. Factories now operate in various parts of the country, chiefly in the Provinces of Drenthe, Limburg, and South Holland, and employ some 4,000 people. Bottles and crystal are the main products, with a small quantity of mirror glass.

Trade Conditions Discussed

Special Meeting of Hardware Jobbers and Manufacturers at Montreal Annual Gathering—Problems of Manufacture and Transportation Discussed.

TAKING advantage of the annual meeting of the Canadian Wholesale Hardware Association at the Windsor Hotel, Montreal, Que., on Oct. 3 and 4, a special meeting of wholesale hardware jobbers and iron and steel manufacturers was called to consider trade conditions. There were forty-eight firms represented and the discussion followed along general lines in connection with current events affecting the trade. This special meeting was called by Jenkins & Hardy, Toronto, and was held in the morning of the 3rd inst.

Trade conditions and the condition of stock in the country were matters dealt with, and manufacturers pointed out to jobbers that they could not look for lower prices for some time to come. The inability to quote lower prices was said to be due to the embargo on various lines and the fact that many Canadian imports of hardware, iron and steel goods now have to go before the United States Priority Board and take their chances on the basis of their being required for actual war purposes whether directly or indirectly.

One of the big difficulties which had to be dealt with to-day, as outlined at the meeting, was the fact that Canadian orders for supplies from the United States now have to pass through the Canadian Government to the United States Government, through the British Ambassador, and from thence to the United States Priority Board, which considers them and lists them according to their importance as regards the manufacture of war necessities.

A feeling which was evident to some extent at the meeting was that there should be no weakness shown in regard to the matter of prices. The reason for this was that there might be a tendency on the part of some hardware dealers who have acquired heavy stocks of certain lines, to cut prices in order to relieve stocks. It was considered that this tendency would result to the disadvantage of all concerned.

It was intimated that difficulties may be faced during the coming winter owing to the fact that transportation difficulties may be more serious than in the past winter. Already the question of transportation is a big problem for jobbers and manufacturers, and it may become as serious a difficulty as are the present questions of labor shortage and lack of raw materials. The seriousness of these two latter problems was emphasized throughout the meeting.

The need for greater co-operation was also a live topic, and some steps were urged to effect greater team-play among jobbers and manufacturers. At a recent convention of Calgary dealers the slogan co-operation was adopted, and the feeling at the Montreal meeting was that some such slogan should be adopted by Ontario and Quebec houses in order that there might be a greater co-ordination of effort.

One speaker dealing with the subject of trade combinations pointed out that now, instead of such combinations being regarded as inimicable to general interest, they are designated as highly organized industrial units, and that the United States Government was getting through their assistance what it could not have got unless the manufacturers had been organized.

The open discussion of such questions as labor shortage, difficulty in securing raw material, transportation problems and other trade questions of special importance under the present circumstances as affecting the hardware jobbers and manufacturers, proved of great interest to the representatives of the Ontario and Quebec houses as well as providing to some extent a basis for the meeting of some of the bigger problems. Further conferences are being planned for the future.

GOVERNMENT AND PUBLICITY
(Importance of the Trade Press)

Two very important meetings have been convened by the Government during the last week or two, one dealing with the distribution of coal, and the other with the question of the people's bread supply. Both these meetings were held exclusively for the information of the Press, and the present writer happened to be a member of the audience at both functions as the representative of one of the largest, if not the largest, series of trade newspapers owned by a single firm in the country. The avowed intention of the conveners of both meetings was to enlist the sympathy of the Press, and to secure the widest possible publicity for the Government schemes. Obviously there are no two subjects more vitally important to the people as a whole than those of bread and coal, and every employer of labor and every worker is directly affected by them. While, therefore, it is satisfactory to find that the Government is fully alive to the urgent importance of a press campaign, it is not equally satisfactory to note that the value of the trade newspapers of the country as a great publicity agent is not yet so fully realized as it should be. It is true that a start seems to have been made in this direction on a limited scale, but so far there is no indication that the Government appreciates its own opportunities of getting in touch with the classes who are most closely concerned.

The Nation's Purse

At first sight it may seem that it is hardly the duty of those who are responsible for the conduct of trade newspapers to teach the Government Publicity Department its own business, but the fact does not seem to be appreciated that after all the workers are the people who are making the money which the nation needs, and are willing to invest it. The Coal Distribution scheme has been given a small show in a section of the trade press, and one would like to feel that this is a first step in the right direction. But there is no reason why other schemes should not be given equal publicity in the columns of newspapers that are read regularly by all classes of workers, skilled and unskilled. The Exchequer Bonds, for instance, would find scores of willing buyers if they were properly advertised in the papers that are read by all the varied workers in the laundries of the country—foremen, engineers, ironers, men and women of all ages and of very various types, all making good wages and quite ready to assist the country and themselves by making small investments. The daily paper undoubtedly has its special uses as an advertising medium, but it is often glanced over and thrown away, while the trade paper is read through from end to end, consulted at intervals during the month or week before the following issue appears, and is frequently preserved for reference, and bound at the end of the year.—Irish Ironmonger.

HARDWARE LETTER BOX

Eclipse Currycomb

The McClary Mfg. Co., Winnipeg, Man.—Would you kindly advise us who are the manufacturers of the Eclipse Currycomb?

Answer.—New York Stpg. Co., N. 11th and Berry Sts., Brooklyn, N.Y.—Ed.

W. A. Moir, Oxbow, Sask.—Could you advise me who manufactures or from whom we can procure the "Gee-Whiz" Washing Machine?

Can any of our readers supply this information?

Salamanders

E. T. Hart, Niagara Falls, So. Ont.—Can you supply me with the name of a manufacturer of Salamanders?

Gurney Foundry Co., Toronto.

Standard Mfg. Co., 49 Cortland St., New York, N.Y.

G. L. Stuebner Iron Wks., 13th and Vernon Ave., Long Island City, N.Y.

Littleford Bros., 443 East Pearl St., Cincinnati, Ohio.

Avenir Range

McKelvey & Birch, Kingston, Ont.—Could you advise us who makes the Avenir Range?

O. Belanger, Regd., 338 Amherst St., Montreal, Que.—Ed.

EDITORIAL COMMENT

CO-OPERATIVE DELIVERY

SHOWN on another page in this issue is a bulletin issued by the United States Government dealing with the many advantages to be gained from Co-operative Delivery. This is published as a result of investigations extending over a period of many months and should give food for thought to the merchants in many small towns as well as the larger centres.

Besides effecting a decidedly big percentage of saving, the system of co-operative delivery where tried is proving far more satisfactory. There is no overlapping and when the consumer can see where this system must benefit him, he will be the first to praise its operations.

We would certainly commend this article to the careful attention of all our readers. Canadian merchants have been facing similar delivery problems and the solution may become evident in looking over this bulletin.

The successful operation of this delivery system will be welcomed by the smaller merchants particularly as this item adds greatly to his cost of doing business and puts him at a decided disadvantage when competing with the larger stores.

The great concentration of thought on business thrift is another lesson which this Great War is teaching us. There is no doubt that these teachings will result beneficially, not only now, but after the war as well.

Co-operative Delivery is practical—it has been and is being demonstrated clearly in many towns and cities.

LATE BENJAMIN MOORE

THERE were many expressions of regret in Canadian paint circles last week, when the announcement appeared in HARDWARE AND METAL of the death of Benjamin Moore. Although the greatest activities of Benjamin Moore were best known to the paint trade in the United States, Mr. Moore had a wide circle of friends in the Canadian trade. That the success of Benjamin Moore extended far beyond the mere accumulation of wealth is evidenced in an editorial in this week's issue of the *American Paint Journal*, one of the leading United States trade papers. No further comment on the editorial is required. It follows:

"In the death of Benjamin Moore the American Paint Trade loses one of its biggest men—a man big in mind and vision and wisdom: big in heart and character and fellowship with his fellows and his Maker.

With the paint trade as the chosen field for the career of a man of such qualities, his life and achievements and his position, in the Trade and outside, are an honor to the Trade, and an example and incentive of infinite value and encouragement to its younger members.

Landing in New York in 1873, "the panic year," and with twenty dollars capital; and retiring recently to the "chairmanship of the board" of a business employing $3,000,000 capital with annual sales of $5,000,000, Benjamin Moore's career eloquently demonstrates the possibilities open to ability and character in America, and in the paint trade.

Nor was his any sordid "success" of mere dollar getting; neither did he await the leisure or retirement from business to do his part in public service. For more than thirty years, and almost daily until his death, he gave active effort and his money to community and charitable and philanthropical work, the lasting value and memory and evidences of which are cherished in many different circles of Brooklyn and vicinity."

THE NEW WAR LOAN

CANADA is about to call for another War Loan. It is necessary to raise funds to meet the increasing cost of maintaining the Canadian Expeditionary Forces; it is necessary for supplying additional credits in Canada to enable Great Britain and the Allies to continue to purchase agricultural products, munitions and other war supplies in Canada

The safety of a Canadian Government Bond is secured by the entire resources of the country, the safest security obtainable—in fact, you really hold a mortgage on Canada, one which will pay you a much higher rate of interest than can be obtained on any other equally or nearly as safe security.

There should be a Bond in every household in Canada. This is a privilege and a patriotic duty, and it is to be hoped that every individual in Canada will secure a Bond or at least a War Savings Certificate.

The money markets of the United States and Great Britain are practically closed to Canada now

and the Government cannot count on the large subscriptions from outside of Canada that were secured in the preceding loan. The necessity of everyone doing his or her bit must be emphasized.

You do not necessarily tie your money up for 20 years in buying a bond. It is negotiable and this feature should not be overlooked. Canadian Government Bonds can be sold at any time or can be used as security for temporary advances from a bank. The purchaser can get his money back (through a sale) whenever he wants it.

HOW TO MAKE MONEY GROW

IN the October issue of *Conservation*, a monthly bulletin published by the Commission of Conservation, Ottawa, the above heading draws attention once more to Canada's War Savings Certificates, which can now be purchased by even the small investor. The bulletin goes on to state:

"War Savings Certificates for the small investor are almost too good to be true. They are so good that the Government will not sell more than $1,500 worth to any one person. They yield over five per cent. on the investment, may be redeemed at any time, and have the whole Dominion of Canada back of them as security. In other words, they have all the advantages of a savings bank account, but have greater security behind them and yield over two per cent. more.

The following table shows how money will grow in three years if invested in War Savings Certificates:

$	8.60	loaned	now	grows	to...	$ 10.00
	21.50	"	"	"	" ...	25.00
	43.00	"	"	"	" ...	50.00

There are, undoubtedly, many who have not looked at these certificates in this light, and will be glad to have before them details relating to the investment necessary to securing returns.

THE SITUATION IN SHEFFIELD

IN a recent copy of *The Ironmonger*, England, an interesting review of the various markets was given. The note appended herewith relates to the general position at Sheffield. The tone of this would certainly indicate to what an extent the organization of the British industries has been effective in that to-day, some of the largest plants, while working to capacity, are not buried under orders so deeply that the end seems impossible of attainment. John Bull works slowly, may be, but surely, and the splendid organization of all industries for the successful prosecution of the war will stand out as one of Britain's greatest achievements. The Sheffield situation is given as follows:—

Reports as to general trade indicate a decline in the volume of orders for such commodities as tool steel, twist drills, files, and engineers' tools, more particularly from continental markets. France is buying on a reduced scale, and the last shipments to Russia, via Archangel, for the year have now left the works. Not much new business on Russian account has been booked lately, and the present total is greatly below that of last year. Home and Colonial orders are being fairly well maintained, but here again the pressure has relaxed. There is, however, no evidence of slackness at any of the makers' works, although some have very little business forward to replace orders as these are completed.

AN INSIGNIFICANT ECONOMY

MAURICE LONG, who despite the English sound to his name, is a Frenchman and the new Minister of Provisions in France, has announced that in two weeks' time the two weekly meatless days will be discontinued, on the ground that they represent an insignificant economy.

It is just a question whether there is much being gained by these restrictions anywhere. With food prices at their present height, it is questionable if there is any large proportion of the community, who are eating largely in excess of their actual needs. If this is so, then the curtailment in one line must of necessity be balanced by an increased consumption in some other. That much at least experience has taught us. Possibly it may yet be proved that the whole campaign results in but an insignificant economy. A wisely judged campaign of conservation is likely to be more productive of actual economy than any campaign of prohibitions.

STEEL SITUATION STILL UNCERTAIN

SOME uncertainty still exists as to the effect federal price control will have on the iron and steel industry in the United States. In covering this situation, the *Iron Trade Review* points out that Washington still is to give the word that will clear up the uncertainty now paralyzing the iron and steel market. The delay is suggestive of new obstacles having been encountered in harmonizing the ramified elements present in the situation. In the meantime, the industry is making such adjustments to the new price level as definite conditions will permit.

Selling of pig-iron at the new fixed price has been growing as inquiry has become more insistent. An increased amount of inquiry is in the market, but most sellers are waiting for further government announcements to clarify the situation before taking business.

Steel production in the country is running less than had been anticipated. Operating difficulties explain the discrepancy.

EVENTS IN THE TRADE

BUSINESS CHANGES

Toronto, Ont.—Boyd & Leslie, hardware, has dissolved.

Toronto, Ont.—J. Greenwood, hardware, has sold to J. M. Boyd.

Toronto, Ont.—G. H. Wall, hardware, has sold to Monarch Hardware Company.

Thamesford, Ont.—L. E. Nobbs, hardware, is reported to have discontinued business.

Montreal, Que.—W. L. Haldimand & Son, commission hardware merchants, has been dissolved.

Proton Stn., Ont. — Jos. Trelford, hardware and tinsmith, has been succeeded by H. Becker.

Gleichen, Alta.—E. A. Duncan is retiring from hardware business. Mr. Hill of Strathmore will succeed him.

OBITUARY

Montreal, Que.—R. S. Weir, president of J. & R. Weir, Ltd., machinists, is dead.

Pembroke, Ont.—M. Howe, of M. Howe & Son, general store, is dead.

PERSONAL

M. E. Nixon, hardwareman of Milton, Ont., spent Friday of last week in the city on business.

A. Speras, general merchant of Balsam, Ont., was a business visitor to the city on Tuesday of this week.

J. Hamilton, Badjero, Ont., general merchant, spent a day in Toronto on business during the week.

J. L. Murray has been elected President of Renfrew Machinery Company, manufacturers of Standard cream separators, Renfrew, Ont.

H. A. Harrington, of Toronto, secretary of the Retail Merchants' Association of Canada, has been appointed Assistant Ontario Fuel Controller.

Edmund B. Siegerson, former branch manager at Albany and Buffalo for the Goodyear Tire and Rubber Co., and later supervising the Sales Promotion work through the mid-west, has accepted the position of Sales Promotion Manager for The McGraw Tire and Rubber Company with headquarters at East Palestine, Ohio.

Lawrence H. Cooney, general manager of the St. Algoma Steel Co. plant and wharves at Sault Ste. Marie, Ont., has resigned. He was for many years in charge of the rolling mill department of the Ohio Works, Carnegie Steel Co., Youngstown, Ohio, before coming to Canada three years ago. He is to be succeeded at the Algoma works by James Nelson, who for the past year has been in charge of the duplex department of the Bethlehem Steel Co., at Bethlehem, Pa.

TRIBUTE TO BIG BUSINESS MAN

J. H. Ashdown, Winnipeg, Elected to the Board of Directors of the Bank of Montreal

James Henry Ashdown, who has been elected to the Board of Directors of the Bank of Montreal, is one of the pioneer hardware men of Winnipeg and the West. He is well known throughout the Western Provinces as a business man of the highest standing. He is president of the J. H. Ashdown Hardware Company,

JAMES H. ASHDOWN,
President of the J. H. Ashdown Hardware Co., Winnipeg, who has been elected to the Board of Directors of the Bank of Montreal.

Limited, with headquarters in Winnipeg and branches in Calgary and Saskatoon; president of the Canadian Fire Insurance Company, vice-president of the Northern Crown Bank, and a director of the Canada Indemnity Company. Born in London, England, on March 31, 1844, he came to Canada in 1852, and established his present business in 1869.

Mr. Ashdown was one of those chiefly instrumental in securing the incorporation of Winnipeg, and since then has been a prominent figure in the commercial, municipal, political, religious, and educational life of the city.

He served as a member of the Winnipeg City Council and then as Mayor of Winnipeg in 1907-08. He was a member of the Royal Commission on Transportation in 1906. He has also served as a member of the Board of Commission of Great Winnipeg Water District. He is president of the Children's Aid Society, ex-president of the Winnipeg Board of Trade, and is on the boards of many other organizations in Winnipeg.

PERSONAL

Charles K. Eichler, of the Slaymaker Padlock Co., visited the Montreal hardware trade this week.

Oliver B. North of the O. B. North Co., Newhaven, Conn., was a business visitor to Montreal this week.

G. U. Angevine, of the Turner Seymour Mfg. Co. Torrington, Conn., was in Montreal this week on business.

James Isbister of Peck, Stow, and Wilcox, Southington, Conn., was a visitor to Montreal hardware circles this week.

M. J. McCormick, for some time manager of the machine tool department of the Canadian Fairbanks-Morse Co., Montreal, Can., has resigned to accept a position with the McCormick Machinery Co., Montreal.

F. Borysewicz has been appointed assistant general manager for Canada of the Liquid Air Society, with headquarters in Montreal. Before coming to Canada, Mr. Borysewicz was connected with the work of the Society of Japan, having taken a similar position there some years ago, previous to which he had been associated with the head office in Paris, France. In the absence of Mr. Jordan, who is now in France, Mr. Borysewicz is acting general manager.

E. H. Danville, editor of the Iron Age, New York, and a member of the U.S. Industrial Congress which was held at Washington when the United States entered the war was a recent visitor to Toronto securing information which may be used by the United States in the standardization of its aeroplane industry. Mr. Danville had a conference with Lord Reading in Ottawa and also with Lord Northcliffe regarding the financial relations of the United States and Great Britain. Governor C. S. Whitman of New York recently offered Mr. Danville the position of chief of the Intelligence Department of New York State.

CORRECTION

Through a mistake in a mercantile report, an item was erroneously published in last week's issue of HARDWARE AND METAL to the effect that Kehoe & Keogh, hardware merchants, of 437a Bloor Street W., Toronto, had changed ownership. A new member, A. Sweet, was admitted to the firm recently, and registration was also only made within the past few weeks. It will readily be seen that the circumstances of the case were responsible for the statement contained in the mercantile report, which was taken as an authority for its publication in HARDWARE AND METAL.

Delivery Costs Cut 40-50 %

Investigations Made in 47 Places

Retail dealers throughout Canada who have been giving considerable thought to the question of their delivery systems will be interested in the report issued as a result of investigations made in the United States. The same conditions of overlapping will apply in Canada as are found with our near neighbor, and action to reduce this to a minimum will be welcomed.

A STUDY of co-operative delivery systems undertaken several months ago by the Commercial Economy Board of the Council of National Defense has shown that such systems have commonly saved from 40% to 50% in investment and operating costs as compared with the individual systems replaced. The first results of the investigation, covering co-operative systems in 47 cities and towns, have just been made public by the Board, together with a number of practical suggestions on installing similar systems.

Of the 47 cities and towns studied the Board found that the co-operative plan had been a success in 30, a failure in 5, and doubtful as to results in 12, largely because the systems in the 12 places had only recently been installed. These cities and towns are located in 20 different States, and range in population from less than 1,000 to more than 200,000.

In one city of 12,000 population 14 wagons were found to be doing the work which under the old system required 20. One grocer in a town of 4,000 had cut his delivery expense from $1,638 to $806 a year. A merchant in another town reduced his delivery expense from $675 to $224 a month. Eleven stores in another place reported an annual saving of $5,000. In one city 9 wagons replaced 17, and in another 11 men, 14 horses and one car replaced 21 men, 32 horses and 4 cars.

The savings generally did not mean less service to the public. In a number of instances the service was actually increased.

Several factors, the Board states, contribute to the saving which generally results from co-operative deliveries. Depreciation charges on vehicles are generally reduced, because instead of several wagons or trucks covering a single district at the same time, one does the work. In place of several complete equipments one will do. Wagons are likely to go out more fully loaded. More deliveries are made per mile of driving. Several supervisors are replaced by one. A unified and more economical planning of routes is made possible.

The five suggestions made by the Board on installing a co-operative system come partly from systems which have succeeded and partly from those which have failed. They are intended to help merchants who are not experienced in organizing and carrying on co-operative deliveries to avoid the pitfalls which have generally been the causes of failure.

First, the Board says, particular pains should be taken to secure impartial valuation of the equipment turned over by the co-operating merchants. In some cases old harness and old wagons have been given in at figures far exceeding their true worth. A system in which this sort of practice is possible at the outset naturally works under a disadvantage.

Second, the Board suggests that merchants planning to co-operate should consider the advisability of establishing a central station where parcels can be brought and grouped according to routes, where c.o.d. collections can be turned in, and where all the business of the system can be concentrated. The central station is not desirable in all cases, but it has been found profitable in many.

The Board's third suggestion is that all details connected with c.o.d. orders be worked out with great care. This is one of the most important problems. It requires for its solution responsible drivers, a special accounting system, and a definite agreement with merchants as to when they may expect returns. Irresponsible drivers will probably mean an inaccurate crediting of customers who make c.o.d. payments, careless handling of the money itself, disputes over the amounts turned in by the driver, and trouble for the management in turning over collections to the co-operating merchants. The accounting system need not be complicated.

Fourth, there should by all means, the Board declares, be a competent executive in charge of the work. Above all things needed for the success of a co-operative system is good management.

The fifth suggestion is that when a co-operative system takes over delivery work for any merchant, under the usual plan of a flat charge per delivery, it should be clearly understood that all deliveries are to be handled through the co-operative system and that there are to be no separate deliveries by the merchant. In a number of towns the Board found that the system had failed because certain merchants had made a practice of turning over the long and more expensive deliveries to the co-operative system and using boys to deliver goods to customers within a few blocks of the store.

The Board is continuing its investigation with a view to making available still more complete and comprehensive data on the subject. It is now prepared, however, to supply advice and information in some detail to associations and individual merchants who are considering the establishment of a co-operative delivery system. Inquiries may be addressed to the Commercial Economy Board of the Council of National Defense, Washington, D.C.

Since the Board last June recommended co-operative delivery systems its correspondence has indicated a wide and growing interest in them. It is now working, either through the State Councils of Defense or directly, with business men in a considerable number of communities, in establishing such systems or increasing the number of merchants participating in those already established. While the Board's recommendation on co-operative deliveries originally referred only to small and medium-sized cities and towns, subsequent investigation has indicated that they are equally practicable and advantageous under certain conditions in even the largest cities.

The recommendation was issued as a war measure. Its primary object was to help make it unnecessary for delivery men who join the army and navy to be replaced by men who are needed in munitions making, farming, shipbuilding, railroading, mining, or some other vital industry.

Making The Perfect Paint

An Account of a Visit to the Martin-Senour Factory, Montreal—The Home of "100 Per Cent. Pure."

By Norman Mackintosh.

"WHY is a modern ready-mixed paint manufactured by the Martin-Senour Process, and 100 per cent. pure as guaranteed by that firm, so much better and more economical to use than paint mixed by the old style hand and paddle process?"

A visit to the Martin-Senour Factory furnishes the best answer to that question. In the following article impressions of an absolutely independent observer during a visit to that factory are given. But before making his tour of the factory the enquirer had a chat with the manager on the principles of the manufacture of pure and perfect paint.

New Ways Supersede Old

"To begin with" remarked the Manager, " in spite of the progress made in processes of paint manufacture, it is still the case that the average house-owner setting out to buy paint begins with a pre-disposition in favor of the old fashioned 'hand-and-paddle' process of paint mixing which old-school painters still recommend. Of course up-to-date progressive, painters everywhere have already fully recognized the time-saving quality assuring advantages of modern methods of paint manufacture. These up-to-date painters are not wasting valuable high-priced time of present-day labor in their contracts, but are purchasing Martin-Senour 100 per cent. pure paints in the large sizes, in barrels, and in 5 gallon containers instead of hand and paddle mixing their paint in the old fashioned way, and Martin-Senour 100 per cent. pure paints are being specified everywhere for the most important contracts by the best architects. And yet in spite of all this the extraordinary thing is that in these days of rapid scientific development in every branch of human industry, there should still be found amongst painters, of all craftsmen, some who are actually content to tell their patrons that the painting trade has not made the slightest advance since the days of their great grandfathers.

Noah's Way Vs. Martin-Senour's

That is exactly what the old-fashioned painter is declaring to-day when he tells the house-owner coming to him about a job of painting, that the old-style hand-and-paddle process of mixing paint is the best. The painter who says that is in effect prescribing in 1917, the identical paint-mixing plan that was in use when Noah painted the Ark! And some old-fashioned painters are actually proud of their hand-and-paddle process!

"Is it reasonable to imagine that in these days, when every other industrial and scientific process known to mankind has improved by great forward strides to higher and higher stages of efficiency and economy, the paint industry alone has stood still? Certainly not, and you have only to look into the matter of the manufacture of prepared paints on modern lines as carried on at the Martin-Senour plant, to realise that there are better, far and away better and more scientific methods of preparing paints for every possible purpose than the old fashioned hand-and-paddle process.

On One Point the Old-Style Painter Is Right

"The hand-and-paddle process of paint mixing is antediluvian, inefficient, and uneconomical, but it must not be forgotten that even the old-style painter who insists on mixing his paints by hand is sometimes right on ONE important point—PURITY.

"The fact that his methods make it impossible for him to live up to his right principle does not make the principle wrong though the process he uses is imperfect. Ask the average conscientious painter of the old school what his ideas are on the subject of mixing a first class paint. He will tell you that what he needs is PURE lead, PURE linseed oil, PURE thinner and drier, and PURE zinc, to which he will add PURE colors to suit the taste of his patron for the job. Every good painter of even the oldest fashioned school will rightly insist on the all-important principle of PURITY in paint. He will tell you that he aims to achieve one hundred per cent. purity if he is to guarantee the quality of the paint he prepares. In principle

The Montreal factory, one of the three manufacturing plants of the Martin-Senour Company in Canada.

he is absolutely right, but remember that his hand-and-paddle process is hopelessly wrong. The only way to achieve perfection in prepared paint is found in modern scientific methods of manufacture. And now, we'll have a look at the factory."

A Visit to the Martin-Senour Factory

In the brightest, most airy spot on the spacious top floor of a most modern factory on the outskirts of Montreal there begins the manufacture of Martin-Senour 100 per cent. pure prepared paint. First impression of the factory gained by every visitor is an impression of daylight, fresh air, and purity. There is orderliness and precision of system on every floor. Even the most casual observer can see that at a glance. In the case of this visit however, the observer came not to make a casual tour of the factory but to enquire closely and particularly into every process in the manufacture of Martin-Senour paint. Freely the plant and its resources down to the minutest detail were laid open before him. Guided by the expert, the enquirer made his tour, and the expert was there to answer the closest questioning on every possible point in paint manufacture. In this account of the visit the answers of the expert are quoted as well as questions of the enquirer which elicited them. Not every paint-making process can stand so searching a test, but this is the best way to tell the story of Martin-Senour prepared paint for Martin-Senour paint is 100 per cent. pure.

Row of Paint-making Mills, Martin-Senour Company, Ltd., Montreal.

Where the White Light Falls

When a poet wished to tell of the most exacting scrutiny the life of a man could experience he called it a "fierce white light". White light shows up impurity. Not the slightest impurity can lurk in Martin-Senour paint for Martin-Senour paint from first process to last is manufactured in clear white light. Up in the brightest spot on the topmost floor of the factory the writer began his inspection and learned how Martin-Senour paint is made. It was morning. Machines were busy, and men beside them. On the upright beside one of the men was pinned a piece of paper bearing certain plain bold figures and letters. From time to time the skilled workman in charge consulted this paper checking off listed items. He was following the formula of one of Martin-Senour's famous prepared paints. From first to last the formula must be followed through process after process. Test after test proves the processes till the final 'O.K.' is placed upon the product and it emerges from the factory one hundred per cent. pure.

Corner in the Printing Department of Martin-Senour Company, Ltd., Montreal

Purest Materials Perfectly Mixed

Although moving machinery must always attract attention first in a visit to any plant a most important item of equipment on the top floor of the Martin-Senour plant makes no movement to attract attention and the visitor might have overlooked it had not the expert indicated it.

"There" said the Expert "are the pipes by which the oils required are pumped from the tanks on the ground outside to the top of the factory. Here at this gauge they are measured exact to formula, and added to the lead and zinc which form the basis of all but one or two prepared paints."

A workman approached the gauge at the time, and operating the mechanism measured off accurately the supply of oil necessary for a paint then in process of manufacture.

"Is that oil tested?" asked the visitor.

"Tested!" replied the Expert. "Tested five different ways, and rejected if it should fail in the slightest degree in any of the five. Every ingredient of Martin-Senour paint is tested and proved pure. The Martin-Senour guarantee demands it."

A step farther on, the visitor paused where another workman was busily engaged.

Absolute Accuracy

"Here" went on the expert, "are the scales for weighing the dry ingredients,

Partial View of Tinting Department, Martin-Senour Company, Ltd., Montreal.

the dry lead and zinc which are in the form of the white powder you see here going into the mixers. Everything is weighed with absolute accuracy. Nothing is left to guess-work."

"These machines are the mixers then?" asked the visitor, watching the revolving mechanisms which had first attracted his attention.

"Yes, they are the first of the mixers. In them the dry ingredients are first brought in contact with the necessary oils, and thoroughly intermingled one with another."

It is here the very earliest stage of the process of paint making that the visitor gets the impression of thoroughness which never for a moment leaves his mind while watching the whole series of the Martin-Senour processes. For, remember, the mixing goes on continuously through all stages of manufacture till the paints are actually in the cans ready for shipment.

Paint Paddles Busy for Hours

To watch the first series of mixing machines at work is a revelation to the man who has ever been under the impression that the old fashioned 'hand-and-paddle' method of paint mixing is thorough. If one wooden paddle stirred around for a number of minutes by the gradually tiring arm of the old style painter can pretend to 'thoroughness' in mixing paint, then what must be said of the thoroughness of eight scientifically fashioned blades revolving steadily for from four to six hours without stop and bringing the dry ingredients and oils of prepared paint in its first process of manufacture to a perfectly smooth and uniform consistency? These persistent mixers with their eight blades each, form only the first of the series of machines that make paint in the Martin-Senour plant.

Modern Efficiency

"How many revolutions a minute do they make?" asked the enquirer.

"For the colors seventy-five revolutions: for white about a hundred." replied the expert.

And the enquirer thought of the poor tired arm of the old style painter with his hand-paddle, and smiled a pitying smile. For how can the hand-and-paddle method ever begin to cope with the thoroughness of such machinery?

Yet the first thorough mixing is not enough for Martin-Senour paint. A second and even more thorough mixing process must be undergone before the perfectly intermingled ingredients proceed to the grinders to undergo the most thorough process of all. In the second mixer the blades revolve as steadily as in the first, and the paint after such careful mixing finds its way slowly and steadily downwards to the grinders.

Slowest, Most Thorough Process Of All

Patience is a necessary virtue especially in paint-making though it can be shown in the Martin-Senour plant that even with infinite patience, infinite thoroughness, and infinite accuracy in every detail a marvellous speed in production may also be maintained. But to look at the grinders in process of paint manufacture in the Martin-Senour plant impressed the enquirer with no idea of hurry, no impression of speed, but only a great certainty that wherever grit may be found in the vicinity of the Martin-Senour plant it is certainly not present even in the most infinitesimal particle in Martin-Senour paint.

Diamond Hard Grinders

For these grinding mills grind slowly, but they grind exceeding small. No hand method ever devised for making the mixed ingredients of paint smooth could ever produce such smoothness of texture as these Martin-Senour grinders achieve. They grind hard and grind steadily and they do not spare their wearing parts. The grinding faces are made of the hardest stone known short of diamond itself, and the paint has to find its way through between the grinding faces in a film so thin that a fly's wing could not pass through uncrushed.

Fires and Kettles in the Varnish Works of Martin-Senour Company, Ltd., Montreal.

Special Tools Used

There are grooves chiselled in the surfaces of these grinding stones, and such is the adamantine hardness of the stone that only the most perfectly tempered tool-steel chisels are of any use in cutting the grooves anew when they have become worn after constant use. The re-tempering of these steel chisels for use in the repair shop of the Martin-Senour plant is a source of particular care, and the securing of steel of the proper quality has been amongst the serious problems of the plant and its executives since the war.

Paint Smooth As Velvet

When the paint emerges in a tiny trickle in what is known as the "paste-form" it is smooth as ivory, soft as the finest silk, a velvety substance tempting to touch. In the paste form it may be collected and packed in barrels or drums for use by painters who purchase their paints in this form, but in the paste form it is still far from being Martin-Senour Prepared Paint. There is still further mixing in front of it.

Importance of the Basic Tank System

To the paint in the paste form there have to be added the thinners and driers, and the tints if the paint be a white base tinted paint as so many of them are. Special separate grinders for the tints operate on the floor beside the main grinders, and the thinners and driers are pumped from their storage tanks to the point where they can be accurately measured, tested, and most conveniently added to the paste-form paint. From here they proceed to the basic tanks, and in these tanks in the Martin-Senour plant is found a feature of modern paint manufacture that makes for thoroughness of mixing coupled with rapidity of delivery to the customer with a rush order, a truly unusual but most acceptable combination of excellences. Perfectly treated with the thinners and driers, the paint flows smooth as velvet to the basic tanks.

Still Mixing

Within the tanks paddles revolving in direction opposite to that of the previous mixing blades take care of the mixing of the paint thoroughly with thinners and driers. Because by means of these basic tanks large supplies of paint practically ready for shipment can be held in perfect condition from day to day, the Martin-Senour plant is able on the very shortest notice to ship very considerable orders the same day as they are received even when special tints are called for.

Same Day Delivery

The expert gave a practical illustration of this.

"In recent instances of paint orders for large institutions," he said, "special tints have been specified, but we have been able to ship complete orders involving from three to four or five thousand gallons of paint in a single day from the Martin-Senour plant. Some firms would require weeks to do that kind of thing. It is a matter of hours with us."

A Row of Tanks in Varnish Works, Martin-Senour Company, Ltd., Montreal.

Speed Plus Economy

Quite evidently the basic tank system makes for speed—speed which never for an instant interferes with the thoroughness of the processes of making 100 per cent. pure and perfect paint. There is economy in the system also, economy in manufacture which means economical quotations for the paint consumer.

Still more vividly the visitor realized that no expense, no trouble, had been spared in the purchase of time and labor-saving machinery, that not even the smallest detail had been over-looked in equipping the Martin-Senour plant, making it without doubt as far as paint making is concerned the last word in modern factory economy and efficiency.

The Filling Tank—Still Mixing—The O.K.

From the basic tanks the paint is pumped to the filling tanks, and at this point receives the final O.K. Within the filling tank there are also revolving paddles, and these reverse again the movement of the paddles within the basic tanks. Thus the process of mixing the ingredients thoroughly goes on from the very first stage to the very last since it is from the filling tank that the paint runs into the cans which are afterwards capped and labelled with the famous 100 per cent. pure label which is inseparable from the name of Martin-Senour on the can.

Absolute Purity Alone Passes

But, and this is an important 'but' —not one drop of prepared paint can leave the filling tank for the can that conveys it to the consumer without first having the final and all important "O.K." attached. This final O.K. represents the sum total of all the series of tests which the Martin-Senour Laboratory staff have steadily been carrying out upon each batch of paint as it goes through the process as described. The final O.K. slip is printed in red, and must bear the names of two thoroughly competent experts before the paint is passed.

A Double Check

Even if the first name signed upon this slip should be that of the head chemist, the O.K. is valueless until the second name is attached showing that two experts have made the final test independently. It costs something in care and precision to place the Martin-Senour guarantee and the words "100 per cent. pure" upon a can of ready prepared paint.

About the Laboratory and the Tests

The processes of manufacture of Martin-Senour paint have been described. But how is the Martin-Senour guarantee of purity maintained throughout those processes? It is maintained by unceasing vigilance on the part of experts trained to the limit in their profession, and by the conscientious care of skilled workmen whose reputations are wrapped up in the reputation of the paint they help to produce. There are two distinct laboratories in the Martin-Senour plant. One the physical or mechanical laboratory contains miniature mixers, grinders, and tanks, a regular little paint manufacturing plant and here the formulae are tested in practical manner. Here also are tested the results by actual application of

Partial View of Lead and Putty Department, Martin-Senour Co., Ltd., Montreal.

paints to woods or metals and tests of the conditions to which they are to be exposed whether out-door or indoor, above water or below water as the case may be. Then there are the standard samples kept in sealed cans, and some of which have been held for ten years or more with absolutely not one trace of alteration of color, tone or of deterioration.

Years Make No Difference

Every new making of a standard paint is tested by comparison with one of these standard samples so that if a customer ten years ago had ordered a certain number, and wished to re-order after all that lapse of time, he would get exactly the shade and quality of paint that he had purchased previously.

These physical tests are applied to every paint manufactured in the Martin-Senour plant, and the spreading power, color, drying quality, and adhering quality of all paints made in the factory are tested and proved satisfactory before shipment is made.

Within the chemical laboratory there are appliances of the most delicate nature for the absolute testing of every ingredient used in the manufacture of Martin-Senour paints. Oils—especially linseed oil which is "the life of the paint" are subject to as many as five tests, and if only one test of the five reveals the slightest fault that oil is rejected from place in the manufacture of 100 per cent. pure paint. In the chemical laboratory also are tested samples of the paints that may have been long in storage, thus assuring that any Martin-Senour paint that leaves the factory is beyond reproach, tested, tried, and proven 100 per cent, pure.

All Other Lines Equally Excellent

In the short space available for this article it is impossible to tell all that the visitor saw and investigated in the course of a morning spent in every department of the great factory. But during the investigation he saw and examined in all processes of manufacture many other examples of the numerous lines of Martin-Senour paint trade products. Floor-paint, Porch paint, Boat paint, Marine paints, Carriage and Auto, Wagon, and Implement paint, Roof and Bridge paint, all are manufactured strictly according to the same unerring standards of accuracy.

From the top floor to the filling tanks the enquirer followed a special order of Red School House paint for a school in Nova Scotia. If the pupils who throng to such buildings and pursue their studies under the protection of Martin-Senour paint can only draw from the honest ruddy face of that excellent product the inspiration to thoroughness and purity which pervades every ounce of it, there will be little fear for the future of Canada! Master painters' green also was in process of manufacture, and the expert pointed out that the reds and greens differ in basic material from the white-base paints, but proved also to the hilt that they do not, and cannot differ in purity and excellence for their purposes.

Neu-tone, Wood-lac stain, Wood-dye Ornamental varnish stain, and Concretone, the fillers, and the fine enamels all are manufactured by the Martin-Senour method in manner beyond shadow of doubt. The white light of day floods the factory: most searching investigation fails to find fault or flaw in the products turned out.

Martin-Senour Varnishes

It would take a chapter to describe the processes of the manufacture of Martin-Senour varnishes which are prepared in a modern varnish-plant apart from the main factory building. Here the costly gums brought from the ends of the earth are stored and reduced by fervent heat in great cauldrons to the consistency required. Blended by experts, tested to the limit of scientific accuracy, agitated, and aged over long patient periods in fast-sealed tanks, they are, when finally passed as worthy of the Martin-Senour Guarantee, filled into cans, or pumped by a modern electric pump to the exact point in the factory where they may be needed in the preparation of a special line of goods. In the varnish cauldrons the temperature at times runs up to a thousand degrees Fahrenheit, and the men handling the work wear great asbestos gloves. There is danger of fire in the varnish factory where such high temperatures prevail in the processes, but modern scientific precautions protect every process, and ensure perfection in the product.

That's why Marble-ite (floor finish), Varnoleum, Finest Interior and Durable Spar have become trade names synonymous with highest quality and equal in reputation to Martin-Senour 100 per cent. pure paint.

Price of Perfection Gladly Paid

That it costs money in these high-price days to maintain the Martin-Senour guarantee in every detail has been indicated. But how many paint-dealers, and consumers of paint realise fully just what the maintenance of the Martin-Senour Guarantee means? It means that though the cost of every ingredient of paint and painters' lines has advanced to unprecedented levels of price since the war began, the splendid qualities of Martin-Senour paints and paint products have not been allowed to vary one iota though manufacturing costs have climbed, and manufacturing profits have dwindled.

Meaning of M. S. Guarantee

It further means that while other makers of paints which carry no guarantee have the advantage if they choose, to make use of many an easier priced inferior substitute in the manufacture of competitive products, the Martin-Senour Company must use, and does use, only the real and pure raw materials no matter how much they may cost. It means in fact to-day, as it meant before the war, that Martin-Senour paints and paint products one and all, are absolutely the best and most perfect in purity and utility for their purposes that

it is possible to make. That is the meaning of the Martin-Senour Guarantee.

Stands Test of Use

That is why it has been maintained and will be maintained on every can, war or no war. For the war will end, and after the war is won business will go on by strides and bounds. Experience in use is the only paint test the people who use paint can go by; and the people who use paint must more and more fully realize by experiment and by experience that IT PAYS TO USE MARTIN-SENOUR 100 PER CENT PURE PAINT.

Superb Service Department

Although this article deals most particularly with the process of making paint, it would be a pity to conclude without giving the reader just a glance at the exceptionally thorough organization of the Martin-Senour service department maintained to give wholehearted and practical help to the dealers who handle the many Martin-Senour lines and reap easily earned and excellent profits by selling them to satisfied consumers. This service department with its printing presses, paper stores, and modern appliances for producing all manner of dealer-aids in the way of advertising literature, and display devices, is a revelation even to minds accustomed to modern methods of publicity. There is nothing the dealer can possibly require, from a color chart to a complete catalogue; from a counter sample set to a complete campaign of paint-publicity, which the Martin-Senour Dealer-Service Department cannot and will not readily supply. Even letter-heads for the dealer, and order books for use in his business are supplied. The series of advertising devices to aid sales is full of variety and fascinating, compelling persuasive power. To enumerate even a hundredth part of the various dealer-aids which the Martin-Senour Service Department supplies would take another article in itself.

Dealer-Agents Gladly Aid

It would be unfair to omit to mention the splendid co-operation which the Martin-Senour Co. has received in the distribution of its products through its thousands of dealer-agents who are located in every city, town and village throughout Canada. These dealers represent the most aggressive class of modern merchants who realize that quality brings them repeat orders and who have pinned their faith to Martin-Senour quality. It is not an exaggeration to say that they are the largest distributors of paints to the consumer with whom any manufacturer can claim relations. The expanding sales of the Martin-Senour company from year to year give proof of the growing knowledge on the part of the Canadian paint user that Martin-Senour 100 per cent. pure paint, the paint for wear and weather, is the most economical and lasting for the Canadian climate.

Publicity a Strong Point

The policy decided upon and strictly adhered to by the Martin-Senour Co., at the out-break of war was in no way to restrict or curtail the extensive advertising and sales promotion campaigns which it has been their custom to carry on. The company realized that during these abnormal times, the dealer was in need of stronger support than ever, and despite the increasing cost and difficulty of securing supplies on many lines of display materials, the policy decided upon was pursued and extended. Publicity campaigns of a stronger nature and more far reaching were put into execution. The facts regarding Martin-Senour quality and service were presented through the largest list of publicity mediums ever used by a paint firm in Canada. These advertisements were conspicuous enough to dominate the pages on which they appeared and without doubt reached every possible paint consumer in Canada, thus influencing trade to the stores of the Martin-Senour dealer-agents.

Consumer Demand Stimulated

In addition to this publicity campaign the strongest features of interior and exterior displays have been generously supplied. Direct to consumer campaigns have been an especially strong feature of Martin-Senour sales promotion work. Ripe plum follow up letters to paint users who might be building or making alterations to premises in localities of dealer-agents have also been used with great success.

Strictest adherence to the policy of the maintenance of highest quality together with this aggressive advertising policy has assured an ever expanding business for the Martin-Senour line even during these years of stress and business uncertainty.

Coast to Coast Service

To facilitate distribution the Martin-Senour Company maintains a coast to coast service with fully equipped factories at Montreal, Winnipeg, and Vancouver, and distributing branches at Halifax and Toronto. At every point there is maintained up to the minute a complete stock of every product of the firm's manufacture, which means that it is possible for any dealer-agent in any part of the Dominion of Canada to obtain at a few hours' notice a supply of any of the famous Martin-Senour products. Little wonder that with such paint, and such service behind every gallon of it, live dealer-agents everywhere realise that MARTIN - SENOUR PAINTS AND VARNISHES ARE THE EASIEST AND MOST PROFITABLE TO SELL.

Store Room and Packing Department of Martin-Senour Company, Ltd., Montreal.

THE CLERKS' DEPARTMENT

HOLLAND, WRIGHT AND LEWIS, MEN WHO WIN WARS

Sketches of American Inventors Who Have Added to Scope of Warfare and Their Inventions.

THE United States has provided many of the mechanical devices which have served to make warfare so all-embracing. It is owing to American inventiveness that warfare is now carried on in the Heavens above and in the waters under the earth. H. Thompson Rich tells in *The Forum* of the men who were behind these inventions, dealing rather with the invention in each case than with the men themselves but supplying nevertheless some interesting material with reference to them.

J. P. Holland designed the first successful submarine, over in Paterson, New Jersey, amid the clatter and roar of silk factories; and after a long struggle, he finally won the support of Isaac L. Rice, the financier, who backed the project and saw it through. The result was the Holland, launched in 1900.

This craft, by its successful performance, won quick favor abroad. England, France, Russia, Japan, and Germany immediately began laying plans for Holland-type boats. The United States was the only large nation that held back. Here was a weapon that could cruise like a battleship, dive like a fish, and rise suddenly to deliver a death-blow at some unsuspecting enemy. But Uncle Sam refused to acknowledge its possibilities, during all the years that Europe was eagerly taking it up. What few under-surface boats our Government did acquire were more for experimental purposes than anything else, and utterly inadequate to the task of helping defend our 3,000 miles of coastline. Yet our manufacturers during those years were turning out quantities of submarines for foreign governments, craft unexcelled anywhere in the world. The Submarine Boat Company recently built ten submersibles for a European Power, of a type in advance even of Germany's latest U-boats.

By the time the war came, Europe had over 400 submarines, all up-to-date; while we had but 27, only nine of which were modern. Now, after three years of it, with the demand for these craft far greater than the supply—which is enormous—heaven alone knows how many submarines are in commission abroad. The Central Powers are authentically reported to have over 500, and it is well known the Allies are not far behind them. Yet in those three years of fiery experience, Uncle Sam has not added over four boats to his sub-surface fleet—and more than that number have been wrecked or scrapped. So as far as submarines are concerned, we are worse off than we were in 1914.

The fact that the Government has ordered 38 of these boats to be built at once, and that there are something like 77 more under construction, is promising. But getting them built is quite another matter. With the major portion of the big naval program not even under way; with the immediate and pressing need for 1,000 merchant ships confronting our builders; with structural steel at a premium,—with these and other gigantic problems of quick preparation for war to face, it is seen at once that the manufacturer is up against a stiff proposition. The fact that we should have begun three years ago does not help us now. We have **got** to build these boats, no matter what obstacles stand in the way. Moreover, we have got to build many more like them in the next couple of years. The foremost naval authorities have shown that we need 300 submarines to properly wage this war.

Of all the weapons that went into the great world struggle, the submarine entered most clouded in doubt. It was a dark horse. But like many another dark horse, it has come through a winner. Those who had their money up on it wear broad smiles. Those who were afraid to bet are going around grumbling. Europe put her money up and won. America kept her money in her pocket. It is not hard to guess who is doing the grumbling.

Aeroplanes.

Consider aeroplanes for a moment. These, too, are an American invention. Everyone has heard of the Wright brothers, of their early experiments with kites and gliding machines at Dayton, Ohio, and of their further experiments at Kittyhawk, North Carolina, where they actually flew.

The Wrights were patriotic Americans. They offered their invention to the Government, just as Holland had done. And as in his case, Washington rejected the idea. Then, after a hard fight for funds, they built two or three more machines and went to Europe. That was in 1908. In the same year, and in the early part of 1900, flights of so successful a character were made that the French Government became interested. The brothers then returned to America, and again offered the United States authorities the idea. This time they were successful. Uncle Sam, having been "shown," turned around and bought back from France the basic patents of the machine, and it was officially adopted by the Government.

But having something adopted and getting Congress to appropriate funds for construction are two entirely different things. Up until 1914 we had less than 100 planes, while Europe had over 1,000 and was acquiring more at the utmost capacity of her factories. Once again, Europe had picked a dark horse. Once again, America had kept her money in her pocket.

American manufacturers had not been asleep though. Ever since and even before the war broke out, they had been busy developing new ideas in engines and planes. The Wright-Martin Aeroplane Company recently delivered 450 Hispana-Suisa engines to France—a type developed right here in the United States, that is the equal of any aeroplane engine made. Moreover, some of the very latest British and French models, capable of making over 150 miles an hour, were designed in this country.

Machine Guns.

Then there is the matter of machine guns. We have enough of the heavy Benet Mercie types. It is the light, air-cooled, 600-shot-a-minute Lewis model that we need. General Sir Douglas Haig, David Lloyd George, and many others have come out openly and said it is the best gun in the world. And the war has proved that they are right. Over 80,000 are in use on the Western front alone, and have been one of the dominant factors there.

The Lewis gun, too, is an American invention. Colonel Lewis, in 1911, brought a hand-made model to Washington and exhibited it. It proved a revelation, yet nothing happened. He then went away and built four complete guns, at his own expense. These he brought to Washington and exhibited in 1912. A number of remarkable performances were made before the Secretary of War and officers of the Army, the gun firing United States service ammunition. A little later, an equally remarkable showing was made at the Signal Corps Aviation School at College Park, Maryland, when the gun was fired from an aeroplane in flight. This was the first time a machine gun had ever been so fired from an aeroplane.

After these tests, Colonel Lewis formally presented the gun to the Board of Ordnance and Fortification. And once again, as in the cases of Holland and the Wrights, the Government rejected an American invention that was afterwards to find recognition in Europe and return to us with the laurel of foreign praise.

When Colonel Lewis went abroad, in January of 1913, he took with him the four guns he had made for Government demonstration. These guns found instant favor on the Continent, and among other triumphs, Belgium took them up and the Armes Automatique Lewis was formed. This company immediately undertook the manufacture of the American gun at Liege. But the work was soon removed to the Birmingham Small Arms Company, England, where operations were begun on a large scale.

When the war came, practically the entire capacity of the Birmingham plant was turned over to making Lewis guns. And the British Government, with both Lewis and Vickers factories open to them, have produced at least six times as many Lewis as Vickers guns. In fact, the demand for this gun has been so

(Continued on page 51.)

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

BELT-OL

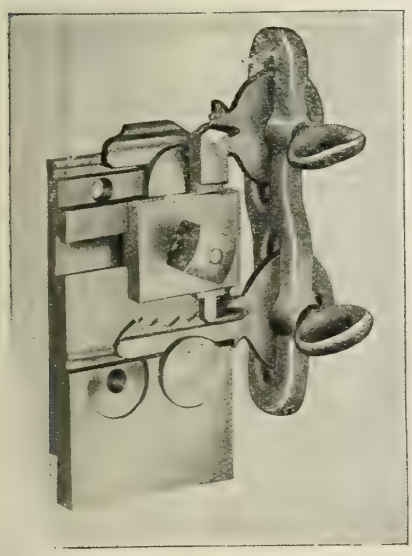
The U. S. Sales Department of E. R. Senn & Company, New York, N.Y., is now located at 52 Vanderbilt Ave. This company manufactures "Belt-Ol", a scientific oil previously manufactured in Europe which it is claimed increases power transmitted by leather belt drives from 3% to 28% by test.

The "Belt-Ol" sales plan is directed to the dealer for the handling of can orders in territories where experienced mechanical salesmen are canvassing. The "Belt-Ol" advertising helps for dealers are to include an attractive series of mailing folders, offering a testing sample can of "Belt-Ol" with direction cards for making an exact test for more power by the consumer himself.

HARRISON KEY FILING MACHINE

Harrison & Co., 89 New St., New York, have recently perfected the Harrison Key Filing machine with which it is claimed one can make Yales, Corbins, Lockwoods, Russell and Erwins, Norwalks, Readings and every known pin tumbler key.

In using this machine full directions are given which emphasize the necessity of good light and every care must be exercised to insure accuracy. The manufacturers claim that by following directions it is impossible to make an imperfect key.

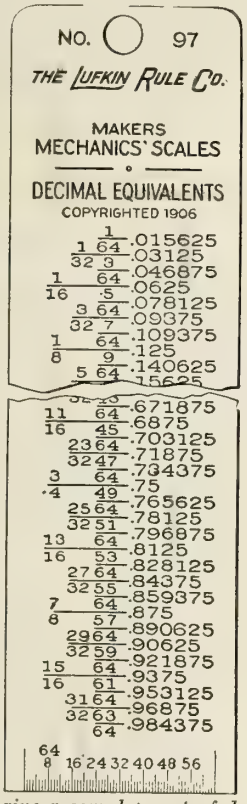


The New Harrison Key-Filing Machine.

Included with each machine is one improved clamp, one angular and one round gauge pin.

MECHANIC'S READY REFERENCE TABLE

It is claimed that information needed at every turn in the day's work of machinists, toolmakers, etc., is brought together in most convenient form on a reference table just put out by The Lufkin Rule Company of Canada, Ltd., Windsor, Ont., manufacturers of complete lines of rules, scales, measuring tapes, etc.



This side give a complete set of decimal equivalents of fractions and at the foot an inch graduated to 64ths.

To be most suitable for carrying in the mechanic's pocket, this article, known as No. 97, is made of flexible spring steel, 1 7/32-in. wide and 6¾-in. long. On one side appear machine screw tap sizes, each followed by tap drill size number and its decimal equivalent, and the corresponding body drill size number and its decimal equivalent, commonly known as the outside diameter size. On the opposite side of the scale is a complete set of decimal equivalents of fractions, and at the foot an inch graduated to 64ths.

It has good, legible figures throughout, so can well be used when hanging at the bench or machine. Being in steel, the article is durable and will not soil, and covering in one both decimal equivalents and tap and drill sizes, reference to two tables, as is now customary, becomes unnecessary, which is a decided advantage. No. 97 will be recognized as a time saver and a practically designed article for its use. Circulars, etc., of this new article are to be had on request to the manufacturers.

STOVOIL

Stovoil, which is turned out by the Superior Laboratories, Grand Rapids, Mich., is claimed by the manufacturers to be a high-grade preparation which performs four operations in one—removes and prevents rust or oxidization, cleans and polishes. It is applicable to any metal surface including iron, steel, brass, bronze, nickel, copper and silver. Its action upon the metal, after removing rust, is to form a very thin polished protective coating over the surface, hermetically sealing the pores of the metal and rendering it impervious to the atmospheric elements as well as moisture in any form.

It is claimed that Stovoil is absolutely clean and dries completely in twenty to thirty minutes when applied according to directions.

The manufacturers lay special stress on the adaptability of Stovoil to stoves as it withstands excessive heat. It is claimed that ranges, coal stoves, gas, gasoline and kerosene stoves, in addition to stove pipes and fittings can be preserved to at least twice their ordinary life by its regular use.

Showing style of package of Stovoil.

Stovoil is put up in four-ounce bottles for household use. Full directions are included with each bottle.

WHAT OTHER PAPERS SAY

STAINLESS STEEL AND CUTLERY

From The *Ironmonger*, Sept. 15, 1917.

The regulation of the Ministry of Munitions prohibiting the manufacture of stainless steel for cutlery, referred to in our issue of September 8 (p. 49), has been circulated by post to the steel manufacturers, and has not been published in the usual way in the *London Gazette*. The Order, which is dated August 31, is as follows:

> "In view of the difficulties in getting supplies of ferro-chrome I am directed to inform you that from the above date the use of the same in connection with the manufacture of stainless steel for cutlery purposes is prohibited. Ferro-chrome must only be used in connection with high-speed, crucible carbon steel and alloy steel, and in the case of the latter only where a priority certificate or other permit number has been obtained which will warrant the manufacture of the steel in question.

As will be seen, the prohibition relates only to stainless steel for the cutlery trade, and, therefore, such steel can still be made for other uses providing that these are connected with the production of munitions of war. That such uses exist is not generally known, but it appears that the material in question has proved extremely valuable for various engineering purposes. Apart from cutlery, steel rendered stainless or rustless by the employment of chromium in its composition is likely to become a big factor in the engineering industry of the future.

Although the cutlery trade stands to lose heavily by the effects of the embargo, its members have received it in a philosophic spirit, as they understand that the supply of ferro-chrome at present available is scarcely sufficient for the manufacture of munitions and other military equipment. They are not disposed, therefore, to grumble at a step which is necessary for the prosecution of the war. One or two makers are considering the advisability of suggesting to the authorities that the regulation might with advantage be relaxed so far as the export trade is concerned. The quantity of stainless cutlery on order for the Dominions represents a considerable sum of money, the cost of such cutlery being double that of the older kind, and as the buyers would not be satisfied to take the latter as a substitute, the prohibition must entail a substantial loss of business at a moment when the maintenance of export trade is a matter of vital importance. A large proportion of the overseas orders are from people who have not waited for their present stock of knives to wear out before endeavoring to avail themselves of the labor-saving advantages possessed by the new kind.

It is to be feared that the manufacture of stainless knives will cease very soon for want of steel, unless the regulation be modified. There may be some steel in stock, but the quantity is unlikely to be considerable, as most of the makers have been for some months delivering hand-to-mouth supplies to the cutlery makers, and the demand has exceeded output for a much longer period.

The subject of the prohibition was brought forward at a meeting this week of the Sheffield Cutlery Manufacturers' Association, when a statement was made giving the reasons which induced the Government to adopt such a drastic measure. Those present agreed that the Government case was unanswerable, and consequently there was no proposal that the trade should seek for a modification of the order, although several members expressed a hope that some concession might be offered with the object of preserving the export trade in stainless cutlery. It was shown that there is a scarcity of chromium, and that the manufacture of munitions calls for a larger supply of steel containing that alloy—which is practically the same steel as used for cutlery—than can be produced at the present time. The prohibition will not be felt so severely as it might have been, because the makers of the steel have been reducing their deliveries to the cutlery trade for a long period, and some orders are months in arrear.

BENEFITS OF GETTING TOGETHER

From *American Artisan*

There was a time in this country when merchants selling the same class of goods were as willing to work together for the common welfare of the trade as a sheep-killing dog is to associate on terms of loving kindness with a flock of lambs. Each was as wary of the other as a pair of strange mountain cats. The more the neighborhoods in which they did business overlapped, the less likelihood was there of any exchange of brotherly courtesies in the management of their stores. The thought never occurred to them in their most extravagant dreams to give their fellow merchants the benefit of any improvements which they had worked out for the gainful handling of business. Individualism was in the ascendant. They viewed with jaundiced eyes the introduction of the ways of democracy into the marts of sale. They were still under the thrall of mediaeval traditions. It was competition to the knife, with thumbs down for the vanquished. The very idioms of the time reflected their spirit. When one wanted to express the idea that two persons were at loggerheads, one simply quoted the familiar proverb, "Two of a trade never agree," and forthwith one's meaning became as clear as the noonday sun.

Happily for our age, few traces remain of that old attitude of "every man for himself and devil take the hindmost." From this it must not be concluded that the present generation of dealers has attained a loftiness of purpose not known or practised by the retailers of other days. Human nature does not change in so brief a stretch of time as a century or two. High-mindedness, doubtless, was quite as much in evidence then as now. The difference must be attributed rather to basic shifts in the processes of production and distribution than to any fundamental alterations in the substance of heart and brain.

Economic interdependence has grown so complex with the development of the factory system that we have all become necessary to one another. Co-operation, expressing itself in reciprocity of ideas and plans, is the natural outcome of modern commerce. National trade associations, state organizations, community groups, and neighborhood clubs are so many manifestations of the new order of things. Retailers engaged in the same line of business have discovered that they can help one another without loss of profit to themselves individually. They can meet in free discussion of merchandising without their backs to the wall. Though each brings something precious to the group, yet he can take away with him the combined contributions of all without diminishing the sum of ideas and suggestions which constitute the wealth of the organization.

The dealer who neglects joining the retail hardware association of his state and who fails to take an active part in the business clubs of his neighborhood is losing advantages which his fellow merchants are coining into dollars and cents. In a multitude of counsel there is wisdom. By consorting with other retailers in a general body of the dealers of his locality, he learns how to profit by the experience of others; how to strengthen his selling forces; how to improve his store methods; and how to increase the percentage of his collections. Uniting with the men of his trade he acquires information and help whose value will soon begin to appear on the pleasant side of the ledger. He need have no fear that competitors are waiting to pounce upon him and strip him of his customers. The fact is that competition is practically limited nowadays to questions of service rather than of price. There is more than enough prosperity for all. Its even distribution is made possible by co-operation, not by merciless rivalry and commercial piracy.

WHERE OPPORTUNITY BECKONS

From *National Hardware Bulletin*

In the older sections of the country there are hundreds of farms whose productivity is anywhere from poor to almost nil.

The original owners following old fashioned methods, worked the land to the limit as long as it would produce anything, then moved on to repeat the process, perhaps two or three times in the course of a single lifetime. Such farms went practically without buyers for years, but a change has come about.

Here is a case typical of the change, a Hollander with little capital, rented a few acres considered about the poorest of the many poor acres on one of these farms. His choice was through necessity, but within three years time those few acres were blossoming as a rose and to-day the former renter owns the farm; the scientific knowledge of agriculture which represented most of his capital at the start enabled him to prosper where the original owner had given up the farm because he could not make a living under the farming methods employed.

Now the towns and villages can and do become played out, or dead from causes identical in principle to those which are responsible for the run down or abandoned farm.

It is gradually coming about that men of good business training are finding such towns real fields of opportunity as are the worn out farms of the east to the Hollander and thousands more like him.

It has taken a good many years to awaken to the fact that a town which has become a dead one can be resuscitated and made a better one than ever by a few business men equipped with the proper push and knowledge of business.

It is true that mail order competition and other economic changes are making it more and more difficult for the merchant in the small town to make good by means of the same methods employed by his predecessors, but those who have adjusted their business to meet the changes as they occur are not only making good, but are achieving even greater success than their fathers.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

THE past week has been one of interesting developments so far as price changes are concerned. Important commodities of the hardware trade have undergone numerous changes. Electrical goods of various kinds have been increased in price in a number of instances, while in other cases slight readjustments downward have been made. Flashlights, cycle lamps, electric hand lanterns, trouble lights, cigar lighters, sockets, switches, carbon candelabra lamps, meters, electric stoves, toasters, boudoir sets, irons and ovenettes are lines that have been changed in price. Bicycles have registered a 10 per cent. increase in price and prices on bicycle accessories are now in process of revision with the intimation made that prices in many lines are likely to be higher. Automobile tires are holding steady in price, but manufacturers in some instances will guarantee prices no further into the future than December 1. Among the other lines of hardware that have advanced in price are stove polish, apple parers, saw sets, thimbles, egg beaters, wedges, cobblers' lasts, draw knives, lamp and lantern burners, rivets and burrs. Cotton waste is in firm market with strong probabability of an advance in the not distant future. Galvanized sheets were in weaker tone with lower prices quoted in some quarters. The market for future linseed oil is weaker, but spot oil is somewhat scarce, owing to the difficulty of getting flaxseed. Turpentine is in firmer market with advances recorded in some quarters. A decline of 50c per hundred pounds was registered in white lead in oil. Glass market is firm with intimations that advances may take place in the near future. Hardware business is reported very good.

MONTREAL MARKETS

MONTREAL, October 11.—Hardware markets are steady in tone in the city and district at present. The decline in white lead in oil of date of writing, the second in two weeks, is important, and due to the lower ingot lead market. An advance has taken place in the wax by-products of the petroleum refining industry—Parawax for instance. Certain small shelf goods lines have been adjusted in price. The manufacturers in conference with the wholesale hardware men at the recent convention pointed out very clearly that there are good reasons for believing that prices will remain steady for some time and will not decline in many hardware lines. With the United States securing 5 years' supplies for the army, shortages of materials, delays in deliveries, and the fact that manufacturers have little or no stock ahead of demand now existing the prospects are all towards steady prices.

Some Lines Of Shelf Goods Altered

Montreal.

SHELF GOODS, ETC.—Matters are still a good deal quieter as regards change list movements in shelf goods, and heavies also. Some points of note are however, to be recorded this week.

Stove Pipe Wire Up

New prices on stove pipe wire have been announced, No. 18 is now $8.25 per 100 lbs., and No. 19 is $8.75 per hundred pounds.

Bread-Makers Up.

The 4 loaf Universal bread-maker is now quoted at $29.50 per doz. or $2.50 each by wholesale hardware dealers. The 8 loaf size is $34.00 per dozen or $2.95 each.

Food Choppers Advanced

Quotations for Universal food choppers are as follows for Montreal and the Eastern district. No. 0, $13.55 per doz.; No. 1, $16.80 per doz.; No. 2, $20.75; No. 3, $28 per dozen.

Iron Rivets

Discount announced for iron rivets burred, black, tinned and coppered is now 15 per cent. off.

Market For Nails And Wire Unchanged

Montreal.

NAILS AND WIRE.—There have been no changes in the market for nails and wire this week. Standard steel wire nails are quoted at $5.50 base, and cut nails at $5.75 base. The base price for wire remains at $6.50 per hundred pounds. As mentioned in special panel last week, the decision reached on the question of U.S. poultry wire netting has made the discount 15 per cent. off list on Canadian and 10 per cent. off on U.S. netting.

Iron And Steel Lines Steady

Montreal.

IRON AND STEEL.—No changes are announced in the market prices of the various lines of iron and steel required by the hardware trade generally, and there have been no hints of possible changes in the immediate future. Demand for iron is quite active, and there are always scarcities of certain lines which have been diverted to war purposes, or the manufacture of which has been held back by exigencies of war. Quotations remain as below.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 18-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

No Let-Up In The Plate Difficulties

Montreal.

SHEETS AND PLATES.—There are no further changes in the quotations for the various lines of sheets and plates, but the prices mentioned for such excessively scarce lines as tin and terne plates, and Canada plates are really only nominal as where good demand for these exist and stocks are at all discoverable, higher prices are asked and paid of necessity. The market is about bare of tinned iron in the large sheets usually imported from Great Britain. The wholesale trade of Montreal which has been hoping against hope for some meagre supplies of this from Britain in spite of the war caused restrictions, begins to despair of getting any more of the British product. Manufacturers over there faced with the necessity for getting first a license to manufacture and then a license to export, and always the many times proved guarantee that the material is required for some essential purpose such as munition making, have at last announced the cancelling of

contracts as it becomes no longer worth while waiting. A prospect exists that galvanized sheets may be revised to easier quotations before long.

MONTREAL—	Montreal, 100 lbs.
10 gauge	$12 50
12 gauge	12 60
14 gauge	11 15
16 gauge	11 25
18-20 gauge	11 30
20-22 gauge	11 35
26 gauge	11 40
28 gauge	11 50

Demand For Stoves Is Keeping Up

Montreal.

STOVES, RANGES, ETC.—The market for stoves and ranges remains unaltered in general tone from conditions of the past week. There is good demand for the heaters. Especially good demand is noted for coal oil burning heaters, and incidentally also for the many new lines of electric heat radiators to switch on to a lamp socket. High cost of coal is believed to have caused a demand for these to save fuel in the chilly fall days not yet cold enough to demand full furnace strength. Quotations for stoves, ranges, and most lines of heaters are steady. Some adjustments of price might take place towards the end of the month, not necessarily advances though in some cases possibly so. Sheet metal is still very, very scarce, and this may affect some lines. Enamelled ware, and tinware are still steady in price however.

Interesting Advances In Oil By-Products

Montreal.

GASOLINE, ETC.—There are still hints, but only hints, of probable forth-coming advances in gasoline and coal oil. The condition of market for crude oil is certainly firm and getting firmer. But with the great and growing need for gasoline and all the products and by-products of petroleum in its refined state, industrial science is continually devising methods of getting more out of the raw material and a recent news-item suggests discovery of a chemical process to multiply greatly the amount of gasoline recoverable from crude oil. Advances in certain waxes which are by-products of the gasoline and coal oil refining industry are taking place this week, the advance of a cent a pound on Parawax and the wax for candles being important to the retail hardware trade. Gasoline still quoted at 32½ cents per Imp. gal. and coal oil Royalite 17 cents, and Palacine 20 cents per Imp. gallon.

Rope Market Firm And Still Steady

Montreal.

ROPE.—There are no alterations this week in quotations for rope but the market continues very firm, and with all likelihood of further advances rather than reductions in prices while the difficulties affecting importation of Manila hemp and sisal continue. Demand for rope is however, at a low ebb just at present, though the recent advance following consistent accounts of the conditions bringing it about as given in HARDWARE AND METAL has stimulated demand where supplies are required for known future needs. Prices are shown in current quotations.

Lead Pipe And Sheets, Etc., Down

Montreal.

LEAD PRODUCTS.—The market for ingot lead being considerably weaker lead manufactured products have declined by a cent a pound this week. Lead pipe and lead waste pipe are now 17 and 18 cents respectively. The discount on traps and bends remains at 20 per cent. on list. Lead wool and lead sheets are down a cent. There is very little demand for the lead products at present.

MONTREAL—	
Lead pipe, lb.	$0 17
Lead waste pipe, lb.	0 18
Lead traps and bends	20% on list
Lead wool, lb.	0 17
Lead sheets, 3 lbs. sq. ft.	0 15¾
Lead sheets, 3½ lbs. sq. ft.	0 15¾
Lead sheets, 4 to 6 lbs. sq. ft.	0 16

Old Metals Are In Easier Market

Montreal.

OLD MATERIALS.—The market for the old metals, old rubber etc., is inclined to weakness in several lines this week. The conditions brought about by the fixing of prices in the United States and the effect of this move on the Canadian market have produced a tone of unsettled nature. Holders of stocks of metals are not over-anxious to part with them at present, but buyers of small requirements in these lines have been able to get supplies at slightly easier rates. The lead materials have been easier, tea lead and heavy lead pipe having declined. Pipe scrap iron and stove plate are easier. Old rubbers are a quarter of a cent down, and old auto tyres half a cent down.

MONTREAL—		
Tea lead	$ 0 06	....
Heavy lead pipe	0 07	....
Yellow brass	0 14	0 15
Red brass	0 20	0 21
Light brass	0 09	....

Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 08½	....
Overshoes, lumbermen's rubbers boots	0 16½	....
Bicycle tires	0 03½	....
Auto tires	0 05½	....

Ingot Metals Quiet; Lead Is Lower

Montreal.

INGOT METALS.—The metal markets are in a general way weaker in tone, but without definite alterations in prices except in the matter of lead which is lower.

TIN.—Tin remains unchanged in price from 64½ cents to 65 cents being quoted.

COPPER.—There is steadiness of market in copper and from 30 to 31 cents are the quotations, market quiet.

LEAD.—The firmer note of last week, has proved to be only passing in lead, and the market this week is represented by quotations of from 11 to 11¼ cents.

SPELTER. — Spelter remains unchanged in price at 11 to 11½ cents.

ANTIMONY.—From 18 to 19 cents represents the market for antimony at present in Montreal, with small demand.

ALUMINUM.—The market for aluminum is characterised by small demand and quotations of 65 cents are representative.

TORONTO MARKETS

TORONTO, Oct. 11.—In the majority of instances where price changes have been recorded they have again been in an upward direction. Linseed oil is one of the commodities which shows a weaker tendency and prices were quoted lower during the week. Stove polish, apple parers, saw sets, thimbles, oakum, egg beaters, axe wedges, cobbler sets, draw knives, lamp burners and lantern burners are among the lines in which higher prices have been recorded. Certain lines of electrical goods have made considerable advances. Flashlights, meters, cigar lighters, carbon candelebra lamps, sockets and switches have all been increased in price by certain makers. An advance of 10 per cent. has been made effective on bicycles, and wholesalers are now in process of revision on bicycle accessories and there is intimation that a number of lines may advance. Business generally is reported very good.

New Lists on Certain Types of Flashlights

Toronto.

FLASHLIGHTS, BATTERIES. — Changes have been announced on list prices on Franco flashlights and batteries which provide for an increase of approximately 5 per cent. This increase in flashlights is the first to be recorded since the war has been in progress. Some manufacturers have not altered their prices at all, but assert that a firm position exists due to the higher prices of raw materials. They affirm, however, that it has been their policy to keep from advancing prices as long as possible, even when their fair margin of profit has been cut down greatly. The discount on Franco flashlights, batteries, cycle lights, hand lanterns and trouble lights is now 33 1-3 per cent. off list on purchases of less than $50 list. and 40 per cent. on purchases over $50 list. Following are the new list prices complete with battery, showing old list and new list for purposes of comparison on lines in which changes have been made:

	Old List Complete with Battery	New List Complete with Battery
No. 4815	$4.25	$4.90

Bicycles Advance Approximately 10%

Toronto.

BICYCLES, BICYCLE ACCESSORRIES.—An advance of approximately 10 per cent. has been made effective on at least two lines of bicycles. There has been heavy booking of bicycles for spring delivery, which to wholesalers indicates that the popularity of the bicycle is fast returning. Following are the prices quoted by one of the large concerns which is stated to be fairly representative of prices in similar grades throughout the trade:

	Trade Price
Men's bicycle, standard grade	$33.25
Ladies' bicycle, standard grade	34.50
Men's bicycle, highest grade	36.25
Ladies' bicycle, highest grade	37.50
Motobike, men's	39.25
Motobike, men's, with tank	41.25
Boys' bicycle, standard grade	30.00
Girls' bicycle, standard grade	31.00

Wholesalers are now at work on the revision of prices on bicycle accessories for new spring prices. It is intimated there will probably be an advancing tendency in many lines due to the increase of manufacturers' costs within the year.

Tire Prices Hold Except for Non-Skid

Toronto.

TIRES, AUTO ACCESSORIES. — As yet there has been no advance in the price of tires, although a firm situation exists due to recent advances that have taken place in the United States. One large concern is guaranteeing against an advance on orders booked up to Dec. 1 for Spring delivery. Other concerns in signing contracts stipulate that should any declines take place the purchaser will be given the benefit of the decline on any unfilled portion of the order. Should an advance take place, the purchaser has the option of taking the remaining portion of contract at the advanced price or of cancelling. In some instances there has been a readjustment downward in the price of certain non-skid designs. On one design where the consumer's price was formerly $23. the new price is $21.95, with a corresponding reduction on the dealers' price. Following are the net prices to retail trade now prevailing on some of the popular selling sizes of plain tread:

Plain tread, 30x3½	$16.65
Inner tube, 30x3½	3.00
Plain tread, 32x4	26.50
Plain tread, 33x4	28.00
Plain tread, 34x4	29.00
Plain tread, 36x4½	40.50

Wholesale automobile accessory dealers are now going into the matter of costs of commodities preparatory to revision of prices for their Spring 1918 catalogues. It is expected there will be considerable advances in a number of lines.

Meters and Cigar Lighters Advance 5%

Toronto.

CIGAR LIGHTERS, METALS. — Higher prices have been announced on Franco cigar lighters and meters, together with carbon candelabra lamps. The increase amounts to approximately 5 per cent. Discounts from list prices on meters is 33 1-3 per cent. on small quantities, and 40 per cent. on larger quantities. Cigar lighters and carbon candelabra lamps carry a discount of 25 per cent. on less than a unit package of ten, 35 per cent. on a unit package, 40 per cent. on ten unit packages of 10 assorted styles. Following are the list prices, which are subject to the discounts named above:

	Old List	New List
Cigar Lighters		
No. 1302	$0.50	$0.60
Carbon Candelabra Lamps.		
Nos. 400 and 400S	0.45	0.55
Nos. 400 and 4018	0.45	0.55

No. 703	1.90	2.25
No. 704	2.25	3.00

Sockets and Switches Moved Higher in Price

Toronto.

SOCKETS, SWITCHES. — Advances have been recorded in the list prices of Franco sockets and switches, the necessity for the change being attributed to the high price of raw materials, while declines have been registered in other numbers. Sockets and switches are now subject to a discount of 33 1-3 per cent. on purchases of less than $50 list, and 40 per cent. on purchases over $50 list value. Following table gives old list and new list prices for the purpose of comparison:

	Old List	New List
No. 2	$0.10	$0.13
No. 4	0.10	0.12
Nos. 5, 6, 7	0.15	0.14

No. 39	0.35	0.28
No. 59	0.30	0.32

Stove Polish and Apple Parers Higher

Toronto.

STOVE POLISH, APPLE PARERS.—Higher prices have been made effective are likely to be announced in the near on Black Jack stove polish, the increase amounting to approximately 12½ per cent. No. 10 in gross lots is quoted at $14.90, and by the dozen at $1.30. Hudson apple parers have advanced in price 5 per cent. and are now sold at $8.90 per dozen.

Sets and Stovepipe Thimbles Up

Toronto.

SAW SETS, THIMBLES.—An advance of 10 per cent. has been made effective in Lincoln and Whiting saw sets, the new price on the former being $8.15 per dozen, and on the latter $5 per dozen. O.K. thimbles is another of the lines that has advanced in price, the increase amounting to 15 per cent. No. 03 are quoted at $7.35 per dozen, No. 04 at $8.70 per dozen, No. 05 at $7.35 per dozen, and No. 06 at $8.70 per dozen.

Egg Beaters and Axe Wedges Advance

Toronto.

EGG BEATERS, WEDGES. — An increase of 30c per dozen has been put into effect on Dover egg beaters, making the selling price now $1.45 per dozen. Axe wedges have also been advanced considerably. New prices on axe wedges for No. 1 are $11 per gross, and on No. 3, $4.45.

Cobblers' Lasts and Draw Knives Higher

Toronto.

LASTS, DRAW KNIVES. — Increased prices have been put into effect on Globe cobblers' lasts during the week, No. A being quoted at $3.25 per dozen, No. B at $2.90 per dozen, and No. C. at $2.10 per dozen. Draw knives of razor blade have made an advance of approximately 60 per cent. No. 1 by 8 in. is now quoted at $9.60 per dozen, 9 in. at $10 per dozen, 10 in. at $10.40 per dozen, and 12 in. at $11.60 per dozen.

Lamp and Lantern Burners Go Higher

Toronto.

BURNERS.—An increase in the price of White Flame lantern and lamp burners has been put into effect following a recent advance in the price of lamp chimneys. No. 1 lamp burner is now quoted at $3.10 per dozen, and No. 2 lamp burners at $3.25 per dozen. Lantern burners are quoted at the same price as No. 2 lamp burners, namely, $3.25 per dozen.

Cotton Waste in Very Firm Position

Toronto.

WASTE.—Cotton waste is in firm position due to the recent big advance in the raw cotton market. Unfavorable crop reports from the Southern United States have had the effect of sending the price of cotton to new high levels, the price for spot middling uplands cotton being in the neighborhood of 28c per pound. At the time of writing one of the large dealers in cotton duck had withdrawn prices on cotton duck and inti-

mations were made that higher prices are highly probable in the not distant future. Demand for waste is reported to be keeping up well. Whether or not there will be an immediate advance in waste is problematical, but those closely in touch with the situation assert that present prices cannot prevail indefinitely if the raw cotton situation continues in such a strong position.

Oakums Advance ¾ to 1c Per Pound

Toronto.

OAKUM.—Higher prices have been announced on nearly all grades of oakum, with the exception of plumbers' spun. Best American is now quoted at $21.50 per hundred pounds, an advance of ¾ of a cent. a pound. U.S. Navy has also advanced ¾ of a cent per pound and is now quoted at $20.75 per hundred pounds. Clipper unspun oakum remains unchanged at the recent quotation of $21.50 per hundred pounds. U. S. Navy English unspun has been advanced 2½c to 20c per pound. U. S. Navy English spun is now quoted at $21 per hundred pounds. Plumbers' spun oakum remains unchanged at quotations of $8.50 to $10.50 per hundred pounds.

Price Regulation Talk Having Steadying Effect

Toronto.

GASOLINE, COAL OIL.—The market for gasoline and coal oil remained unchanged during the week and reflected the condition which exists in the American market. Conferences have taken place between the Federal Trade Commission and representatives of the oil interests in the United States with respect to fixing prices on Government business. Whether or not the price set for Government business will apply to domestic consumption is not yet apparent. Although a firm situation exists so far as the condition in the primary crude oil situation goes, there has been no indication of an advance in the Canadian market by reason of the fact that developments in the American market are being awaited. Gasoline is still quoted at 31½ and 32c per gallon. Some large oil dealers state the month of September has been the best in their history so far as amount of sales go.

Heaviest Month on Oil Heaters

Toronto.

STOVES, HEATERS, ENAMELWARE.—Dealers in oil stoves report the month of September as the heaviest in their history in some instances. On oil heaters alone one concern states their sales amounted to 5,500 heaters during the month of September. This is equivalent to eight carloads. The scarcity of coal and the possibility that conditions may not be good during the coming winter have been a gentle stimulus to make people buy oil stoves in the belief that they will be able to get coal oil at any rate to drive the chill from their homes. Other lines of stoves have been in good demand, and shipments are going forward as rapidly as manufacturers can secure their stock. Enamelware was in unchanged market with a steady demand reported.

Shadow of Regulation Steadying Factor in Rope

Toronto.

CORDAGE, TWINE.—There was a steady situation in rope and twine during the week. In the United States an expert has been named by the Federal Trade Commission to inquire into the matter of costs of fibre and manufacture with the idea in view of regulating prices. The shadow of this regulation is acting as a steadying factor on the market and prices remained unchanged at primary points during the week. Demand is light in cordage in the local market, as it is now between seasons. Travelers are now on the road soliciting Spring booking business. There are some light supplies of binder twine going out for tieing up corn, but beyond this trade is somewhat light.

Small twines, comprising jutes and hemps, have made an advance during the week. Common jute twines have advanced 1c per pound, and fine jutes have advanced 2c per pound. Hemp twines have advanced from 4c to 7c per pound. Base price on jute twines is now 17c, and on hemp twines 28½c. There has been a fair demand for small twines, and dealers anticipate there will be a heavy demand from now until the Christmas holiday season.

Lists On Hotpoint Goods Are Revised

Toronto.

ELECTRIC IRONS, STOVES, OVENS. New list prices on certain lines of Hotpoint goods have been announced, which provide for a substantial increase. Among the lines to be affected are electric stoves, toasters, boudoir sets, grills, irons, ovens. The discount on these goods is 25 per cent. off list, less 5 per cent. in 30 days. Following are the items in which changes have taken place, showing the old list prices and the new list prices:

	Old List Price	New List Price
Stoves.		
Disc stove 4, No. 40106	$ 5 75	$ 6 00
Radiant stove, No. 20302	6 00	6 50

Ovens.		
Ovenette, No. 40701	4 50	5 50

Above prices subject to discount of 25%.

Nail Prices Have Remained Unchanged

Toronto.

WIRE, NAILS.—While the quotations on nails generally remain at $5.45 per 100 pounds base, large buyers and contracting firms have in some instances been able to get lower quotations. The situation in this respect remains the same as outlined in a recent issue. Stovepipe wire has made a considerable advance, size No. 18 now being quoted at $8.25 per hundred, and No. 19 at $8.75.

Iron And Steel Prices Maintained

Toronto.

IRON AND STEEL.—Prices on iron and steel in the local market were maintained during the week. Dealers assert that Canadian mills have not been making any deliveries on merchant contracts since July, and that there is every possibility they will not be able to commence making shipments until the latter part of November. The embargo placed on the delivery of iron and steel to the merchant trade during the first part of August is being maintained. While contracts for heavier shells have not been let, there have been big orders placed for the lighter shells, which are apparently keeping the munition plants just as busy as ever. The inability to get further stocks is a factor that is tending to firm prices on any stocks of iron and steel that are still in dealers' hands.

TORONTO—		Per 100 lbs.
Common bar iron	....	$ 5 25
Common bar steel	....	5 50
Refined iron	....	5 65

Sheet cast steel	30 00	35 00

Galvanized Sheets Quoted Lower By Some

Toronto.

SHEETS, PLATES.—Galvanized sheets were in weaker market during the week, and quotations were reported to have been made as low as $11 on the 10¾-oz. size. For the most part quotations ranged from $11.25 per 100 pounds to $11.80, and in some instances the high quotation of previous weeks at $12 was maintained. Fairly good stocks of galvanized sheets have been coming forward on old contracts, and this has put a different complexion on the market. Black sheets were maintained at the range noted last week. No. 10 gauge and 3/16-inch and ¼-inch plate were maintained at the advances noted last week.

TORONTO— BLACK SHEETS—		Per 100 lbs.
10 gauge	$	$12 00

Conductor Pipe And Eavetrough In Demand

Toronto.

EAVETROUGH, CONDUCTOR PIPE. The market for corrugated sheets, conductor pipe and eavetrough is still in a waiting condition, pending more specific information as to prices fixed in the United States. Corrugated sheets are in light demand, but conductor pipe and eavetrough are reported in fairly good demand. Conductor pipe and eavetrough are quoted at 10 per cent. off list.

No. 26 gauge	9.60-10.00	....

Heavy Demand On Boiler Tubes Keeps Up

Toronto.

BOILER TUBES.—Dealers state there is a very heavy demand for boiler tubes at the present time, coming principally from Government sources to be used in shipbuilding. No further stocks have reached the local market, and it would seem that present stocks will be pretty well cleaned out ere the New Year comes round. Where further supplies will come from after that time is a problem that is perplexing dealers. Prices were unchanged during the week.

Lead Pipe And Waste Pipe Down 1c

Toronto.

LEAD AND ZINC PRODUCTS.—Declines of 1c per pound in each instance on lead pipe and lead waste pipe were announced by dealers during the week, making the price of lead pipe 17c and lead waste pipe 18c per pound. Easier conditions in the primary market for pig lead are responsible for the declines. Other lead products remained unchanged at the declines noted last week in lead wool and lead sheets. Demand continues only fair.

Lead pipe, lb.	$ 0 17	....

Old Brass, Zinc And Copper Again Advance

Toronto.

OLD MATERIALS.—There was a turn in the market on old materials during the week when the weak condition noted in last report has given way to a better tone. Red brass is quoted higher by 1c at 20c per pound; heavy zinc is up ¼c to ½c at 6c to 6¼c per pound. Heavy copper also advanced 1c, and is quoted at 21½c. Old rubber boots and shoes declined ¼c to 8¼c. Old cast iron is quoted at $23.50 to $25, according to grade. No. 1 railroad wrought iron was firmer at $22 per ton. Mills were in the market for supplies a little more freely during the week, and collectors showed a disposition to sell. There was a better feeling manifest throughout the market.

Lead And Spelter Show Easier Tone

Toronto.

INGOT METALS. — There was a weaker tone in lead and spelter during the week in the primary market and the local market was down for spelter as a result of this situation. Other ingot metals remained unchanged in price at quotations of last week. There is a good demand for copper reported but dealers are unable to get sufficient supplies.

COPPER.—A good demand for ingot copper was reported during the week, but dealers state they have difficulty in getting supplies due to the inability to place contracts at the price established by the United States Government. Casting copper continues to be quoted at 31½c and electrolytic at 32½c per pound.

TIN.—There was a steadiness in the market for tin locally during the week and prices were unchanged at 63½c to 65c per pound. Future tin declined in the primary market following lower prices on spot stocks.

SPELTER.—An easier tone characterized the spelter market during the week and prices were quoted ½c lower at 10c. The market is a waiting one pending action by the United States Government within the next fortnight with respect to purchases.

LEAD.—The market for lead is dull and heavy with intimations in the primary market that the Trust price is likely to be reduced to 7.50c basis. Locally quotations were unchanged at 10½c—11c.

ANTIMONY.—There is a light demand for antimony both locally and in the primary market. There is practically no trading in future antimony at the present time. Locally prices were maintained at 18c pound.

ALUMINUM.—The market is dull at primary points and there is an inclination to an easier feeling. Quotations were unchanged locally at 60c pound.

PIG IRON.—Prices on pig iron are unchanged but are purely nominal so far as the Canadian market is concerned. In the American market most of the business done is on old contracts and makers are withholding quotations for the reason that they are well committed for the balance of the year. Consumers can only await development.

LONDON MARKETS

LONDON, October 9.—Merchants in this district have well assorted stocks on hand and are pleased with the volume of fall business up to date. Stoves and stove accessories have had a good sale during the past week. A new list has been issued on drills. Stove pipe wire, iron rivets and burrs and cocoa door mats have advanced. Business is seasonably good and prices are generally firm.

Advance In Stove Pipe Wire

London.

STOVE PIPE WIRE.—An advance is recorded this week in prices on stove pipe wire bringing new prices to $8.25 per 100 lbs. for 18 ga. and $8.75 for 19 ga. Small lots sell at 9c per lb.

Iron Rivets and Burrs

Prices on iron rivets and burrs have also advanced bringing new discount to 15 per cent. off list, with usual extras for tinned or coppered rivets.

Door Mats Up 10 Per Cent.

London.

COCOA DOOR MATS.—An advance of ten per cent. has been made this week in prices of cocoa door mats, bringing new quotations to the following; No. 1, 14 x 24 inches, 95c each; No. 2, 16 x 27 inches, $1.25 each; No. 3, 18 x 30 inches, $1.55 each.

Poultry Netting

Prices have been set for present and spring delivery on Canadian poultry netting. 1 and 2 inch mesh netting is priced at 15 per cent. off list.

New List Prices Issued On Drills

London.

DRILLS.—New list prices have been issued on drills and are now in effect here. New list is up to ½ inch drills. Net list on bit stock drills, round shank jobbers length and S and D ½ inch shank blacksmith drills with a general discount of 30 per cent. is as follows:

Best Stock Drills

2-32, $2.50 doz.; 3-32, $2.70 doz.; 4-32, $3.00 doz.; 5-32, $3.50 doz.; 6-32, $4.00 doz.; 7-32, $4.50 doz.; 8-32, $5.00 doz.; 9-32, $6.00 doz.; 10-32, $7.00 doz.; 11-32, $8.00 doz.; 12-32, $8.50 doz.; 13-32, $9.25 doz.; 14-32, $10.50 doz.; 15-32, $11.75 doz.; 16-32, $13.00. Discount, 30%.

Round Shank Jobbers' Length

1-32, $1.50 doz.; 2-32, $1.60 doz.; 3-32, $1.70 doz.; 4-32, $1.80 doz.; 5-32, $1.90 doz.; 6-32, $2.25 doz.; 7-32, $2.75 doz.; 8-32, $3.25 doz.; 9-32, $3.81 doz.; 10-32, $4.35 doz.; 11-32, $5.05 doz.; 12-32,

$6.00 doz.: 13-32, $7.00 doz.; 14-32, $8.50; 15-32, $10.00 doz.; 16-32, $12.00 doz. Discount 30%.

Sand D½" Shank Blacksmith Drills

4-32, 45c each; 5-32, 45c each; 6-32, 50c each; 7-32, 55c each; 8-32, 60c each; 9-32, 65c each; 10-32, 70c each; 11-32, 75c each; 12-32, 80c each; 13-32, 85c each; 14-32, 90c each; 15-32, 95c each; 16-32, $1.00 each; 17-32, $1.05 each; 18-32, $1.10 each; 19-32, $1.20 each; 20-32, $1.30 each; 22-32, $1.50; 24-32, $1.70. Discount 30%.

Fair Sale For Nails; Rope Firm

London.

NAILS.—There is a fair sale for nails in the local market at unchanged prices this week. Wire nails are quoted at $5.45 base for wire nails and $5.75 base for cut nails.

Rope

There is no change in rope prices this week at former quotations of 39c per lb. base for pure Manila; 33c for British Manila; 33c for New Zealand Hemp and 27½c for Sisal.

Oil Heaters; Building Paper

London.

OIL HEATERS.—There is a good sale this week for oil heaters at unchanged prices as follows: No. 520, $3.85 each; No. 525, $3.80 each; No. 530, $4.25 each.

Building Paper

Prices on building paper recorded this week are as follows: No. 1 plain fibre, $1.10 per roll; No. 2 plain fibre, 59c per roll; No. 1, tarred fibre, $1.25 per roll; No. 2, 79c per roll; tarred felt, $3.30 per 100 lbs. and asbestos paper $12 per 100 lb.

Game Traps; Forks; Snow Shovels

London.

GAME TRAPS.—Prices on game traps this week are as follows:

Victor No. 0, $1.55 doz.; No. 1, $1.80 doz.; No. 1½, $2.70 doz.; No. 2, $3.75 doz. Oneida Jump, No. 0, $2.00 doz.; No. 1, $2.35 doz.; No. 1½, $3.50 doz.; No. 2, $5.15 doz.

Forks

There is a good sale for spading forks for digging potatoes. Manure, ensilage and spading forks, etc., are quoted this week at 25 per cent. off list.

Snow Shovels

Snow shovels are quoted at 12½ per cent. off list.

Prices Firm On Miscellaneous Lines

London.

GLASS.—There is a fair sale for glass at unchanged prices as follows: single and double diamond 50 per cent. off list; cut lights 40 per cent. off list.

Miscellaneous Lines

Cow ties are quoted at 12½ per cent. off list.

Stall fixtures (hollow) are priced at $1.25 per doz.

Stove boards are quoted at 30/10 per cent. off.

Ash sifters (common wood sides) are $2.15 per doz.

Lanterns in short or long pattern are quoted at $12 per doz.

Linseed Oil, White Lead Firm

London.

LINSEED OIL.—Prices on linseed oil have remained unchanged this week at the following quotations:

	Raw	Boiled
1 to 2 bbls.	$1.49	$1.52 per gal.
3 to 5 bbls.	1.48	1.51 per gal.
6 to 9 bbls.	1.46	1.49 per gal.

White Lead in Oil

Prices on white lead in oil are unchanged this week at $18 per 100 lbs., in ton lots for pure putty and $18.30 per 100 lbs. in less than ton lots.

Turpentine Firm; Putty Unchanged

London.

TURPENTINE. — Turpentine prices have remained firm during the week at former quotations of 69c per Imp. gal. in 1 bbl. lots; 68c per gal. in 2 to 4 bbl. lots and 76c per gal. in 5 gal. lots.

Putty

Putty prices are firm at the new prices as follows: Standard drums 25, 50 and 100 lbs., $4.75 per 100 lbs.

Pure putty in drums 25, 50 and 100 lbs. $5.75 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, Oct. 9.—With the close of September, business for the year shows substantial increases over the same period last year. With harvesting in full swing and every farmer putting forth his best endeavors to move the 1917 crop, the hardware trade is quieter than in previous months, which is quite natural, but still in excess of last year.

Present conditions indicate that deliveries for the spring trade on many lines will be more unreliable than at any period since the commencement of the war, especially on all lines that are manufactured from the better grades of steel as recent embargoes have been put on all steel for export from the United States except quantities required for the manufacture of munitions, and should these embargoes remain in force during the coming year it is felt that serious shortage will occur in many of the finished steel products.

Changes for the week are very limited on heavy goods, but show numerous advances on shelf goods, and declines on linseed oil and turpentine.

Advance Expected In Sisal Prices

Winnipeg.

ROPE.—Bookings are now being accepted by the Winnipeg jobbers on rope for 1918 spring delivery at to-day's prices. The manufacturers advise that the situation with regard to supplies of hemp are daily becoming more acute and report that as soon as the binder twine manufacturers enter the market for their next year's requirements that sisal rope will advance to at least 30c per lb. To-day's market prices are quoted herewith: Sisal, 27½c lb.; pure Manila, 38½c lb.; British Manila, 32½c lb.; lath yarn, 27½c lb.; African hemp 32½c lb.

Bluestone Declines; Big Sale Expected

Winnipeg.

BLUESTONE.—Bluestone which last year sold at 14c lb. is quoted for spring shipment at 12c lb. and indications point to a large increase in sales over last year owing to the high prices at which Formaldehyde will have to be sold. Prices have not yet been announced on the latter, but it is thought that it will be in the neighborhood of 30c per lb.

Advance On Lace Leather, Anvils

Winnipeg.

LACE LEATHER. — Lace leather again shows an advance of 5c per lb. and is now quoted. Oak tanned sides $1.65 lb.; cut laces $1.85 lb.; rawhide sides, $1.60 lb.; cut laces $1.80 lb. Booking are now being taken for 1918 shipment at above figures.

Peter Wright Anvils

Peter Wright anvils (or equal) show further advances and are quoted to-day as follows: 60 to 69 lbs., 26c lb.; 70 to 79 lbs., 25c lb.; 80 and over 24c lb.

Fork Handles, Lanterns Advance

Winnipeg.

FORK HANDLES.—New prices have just been established on all lines of fork handles and show quite a strong advance over previous prices. To-day's quotations are as follows: Hay Fork Extra Best, 4 ft. $2.45 doz.; 4½ ft. $2.70 doz.; 5 ft. $3.10 doz.; 5½ ft. $3.50 doz.; Manure Fork Handles, 4 ft. $2.90 doz.; Straw Fork Handles, 4½ ft. $3.10 doz.; 5 ft. $3.55 doz.

Lanterns

Lantern prices have been adjusted by the manufacturers and show an increase on the Japanned of 25c per doz. Prices are as follows: Long Globe Plain, $12.50 doz.; Japanned, $13.25 doz.; Short Globe Plain, $12.50 doz.; Japanned, $13.25 doz.; Dashboard, No. 25, $16.25 doz.

Advance On Wrenches: Sisal Clothes Line

Winnipeg.

WRENCHES.—Prices on Crescent wrenches after remaining firm for about a year have had to be advanced and are quoted as follows: 4-in. $9.00 doz.; 6-in. $9.00 doz.; 8-in. $11.00 doz.; 10-inch $13.80 doz.; 12-inch $17.25 doz.

Sisal Clothes Line

Following the recent advances in Sisal rope comes Sisal clothes lines, which show an advance of about 10% and are quoted to-day at 48 ft. $1.60 doz.; 60 ft. $2.00 doz.; 72 ft. $2.40 doz.

Sharp Advance On Locks And Vises

Winnipeg.

YALE AND TOWNE PRODUCTS.—New prices have recently been put into force on Yale and Towne products and vary from 10% up. As the line is very extensive only a few of the standard articles are herewith quoted: Padlocks, No. 225, $7.00 doz.; No. 823, $19.35 doz.; No. 833, $22.00 doz.; Yale Latches, No. 42, $32.50 doz.; No. 042, $30.25 doz.; No. 44, $37.00 doz.

Blacksmiths' Vises

Blacksmiths' Vises show one of the strongest advances since the war; being from 30 to 50%. To-day's prices are as follows: 40-lb. $12.50 each; 45-lb. $13.00 each; 50-lb. $13.50 each; over 50 lbs. 25c lb.

Window Glass Firm, With Good Demand

Winnipeg.

WINDOW GLASS.—Prices on window glass remain firm with the usual demand at this season of the year. To-day's prices are as follows:

	Single Case	Double Case
Up to 25 inch	$9.50	$13.75
26 to 40	10.50	15.75
41 to 50	13.50	17.75
51 to 60	14.00	18.50
61 to 70	15.00	20.00

Bookings are now being accepted on this basis for shipment up to April 1.

Decline In Linseed Oil And Turpentine

Winnipeg.

LINSEED OIL.—Linseed oil again shows a decline of 8c per gal. over last week's price and is quoted to-day at: Raw, $1.57 gal.; Boiled, $1.60 gal.

Turpentine

Turpentine prices which have remained firm for a lengthy period show a decline of 5c per gal., making to-day's market price as follows: Brls. 75c gal.; ½ Brls. 78c gal.; 5 gal. cans 80c gal.; 1 gal. cans 80c gal.; with the usual charge for containers.

Prices Steady On Washing Machines

Winnipeg.

WASHING MACHINES. — Washing machine prices remain steady and bookings are now being taken for 1918 delivery at the following prices: New Idea, $11.35 each; Snowball, $8.50 each; Dowswell, $4.75 each. The same applies on wringer prices being as follows: Royal Canadian, $51.90 doz.; Eze, $56.10 doz.; Bicycle, $63.00 doz.; Ajax, $125.80 doz.

INDUSTRIAL NOTES

Winnipeg, Man.—The Canada Metal Co. of Toronto, propose enlarging their office building here.

Montreal, Que.—The Simonds Canada Saw Co. will make additions to its plant and instal new equipment to cost $5,000.

Hamilton, Ont.—The Canada Screw Co. are building an extension to their factory.

Toronto, Ont.—The request of the Toronto Harbor Commission for permission to sell a site of four acres of land in the Ashbridge's Marsh industrial district to the Imperial Oil Co. has been rejected by the City Council. Leave, however, was granted the company to erect a large tank for the storage of gasoline and to lay conduits under certain streets, so that it might supply oil to the Consumers' Gas Co. Whether this will be done is an open question, as the management of the company has repeatedly declared that it will not make large expenditures on land of which it cannot obtain the freehold.

Toronto, Ont.—A building permit has been issued to the Willys-Overland Co., for the construction of a one-storey brick addition to machine shop on Weston road, to cost $3,500.

Toronto, Ont.—The Imperial Government has placed a large contract with the Willys-Overland Co., Weston road, for the manufacture of airplane motors. The necessary plant is now being installed, and the work will give employment to a large number of additional hands.

The Cannon Oiler Co., manufacturers of the Cannon Oiler, have succeeded R. E. Bloomer, Keithsburg, Ill. The change in name is the only change in the operation of the company and there will be no change whatever in the construction of the firm's product.

Montreal, Que.—The Canada Foundry and Forgings Co is going into the shipbuilding industry extensively and contemplates purchasing the plant of the Delaney Iron and Forge Co., at Buffalo. The Canadian concern will operate in Buffalo as well as in Welland.

Toronto, Ont.—Imperial Oil Company are endeavoring to purchase from the city four acres of land in Ashbridge's Marsh at a rate of $15,000 per acre. Harbor Commissioners have agreed to lease to the company for 21 years 300 ft. of dockage. Oil will be brought by tank boat and pumped directly to storage tanks.

INCORPORATIONS

Toronto, Ont.—Chief Motor Company, Ltd., has been incorporated with a capital of $1,000,000 to manufacture and deal in motors, engines, carriages, etc.

Wakyte Mfg. Co., 259-261 Stanley St., Winnipeg, makers of sanitary closets, barrel trucks, etc., have recently been incorporated, and are now doing business under the name of the Wakyte Mfg. Co., Ltd.

Pointe-aux-Trembles, Que. — Morin Packing Company, Ltd., has been incorporated with a capital of $49,000 to operate abattoirs and prepare glue, paints, varnishes, nails, etc.

Ottawa, Ont.—Code-Carkner, Ltd., has been incorporated with a capital of $40,000 to manufacture and deal in leather and rubber goods. E. E. Code and J. H. Carkner, merchants of Ottawa are among the incorporators.

Toronto, Ont. — Bond Engineering Works, Ltd., has been incorporated with a capital of $100,000 to carry on business of founders, steel manufacturers, metal refiners, and to manufacture hardware, tools, implements, etc.

Calgary, Alta.—Great West Tractor Company, Ltd., has been incorporated with a capital of $700,000 to carry on business as manufacturers of tractors, iron founders, metal workers and to deal in hardware, and implements.

Toronto, Ont. — International Rubber Goods, Ltd., has been incorporated with a capital stock of $40,000 to manufacture and deal in automobiles, rubber tires, and all classes of rubber goods. J. F. Lee and D. F. Johnston, merchants of Toronto are the chief incorporators.

BOOKLETS AND CATALOGS

"The Straight Road" is the title of a sales talk in pamphlet form published by E. C. Atkins & Company, Indianapolis, Ind., and mailed out to several thousand members of Atkins Silver Steel Saw Club, which club is composed of retail hardware salesmen. The talks are given about every sixty days. In the latest pamphlet the necessity of having a detailed knowledge of the goods being handled was emphasized. "Many an order has been lost through the salesman's ignorance of his product, and how to apply it to the needs of his customers," say The Pamphlet. All salesmen want to be successful; therefore it behooves all of us to learn more about the goods we wish to sell—to fluently discuss their quality and uses, in order to arouse the motives of a possible buyer. There is motive for every sale. But the salesman must arouse the motive—the willingness to buy. And all good salesmen quickly take advantage of this willingness by closing the sale."

Household Utensils Catalog

Andrews Wire Works of Canada, Ltd., Watford, Ont., have issued a splendidly gotten-up catalog, featuring a wide range of kitchen utensils and helps which it is said are rapid sellers, and lend themselves splendidly to displays of household goods. Copies will be mailed free on request.

THE CLERKS' DEPRATMENT

(Continued from page 42.)

great that the Savage Arms Company, an American firm, has been called to the aid of the Birmingham plant, and has been supplying Lewis guns to Great Britain at the rate of from 300 to 400 a week. A large Lewis gun factory has also been started in France.

Yet until our trouble with Mexico arose recently, Uncle Sam had only one of these guns, the original model. When the southern border became turbulent, Washington saw that Lewis guns were going to be needed. The Government, therefore, borrowed from Canada 350 Lewis guns, firing British ammunition. It was these guns that sent the Mexicans about their business.

WEEKLY PAINT DEPARTMENT

Thirty Days Still Left

Spring Paint Business Light—$10.00 or $100.00—If Paint is Right, Don't be Afraid of the Price—Brighten the Home For Winter—Making Use of Color Cards—See What Results 30 Days' Effort Will Bring.

THERE is another month at least in which the sale of paints can be pushed aggressively for outside use, and there is a growing conviction that the fall is by all means the best time to paint.

The reasons assigned to this are varied; dealing with the splendid condition which the wood must be in after summer weather to dry the gum and moisture out—the freedom of the wood from the annoying fly and bug—the havoc likely to be done to unprotected surfaces during a long siege of winter weather.

Spring Business Light—Get the Returns Now

Business during the spring of the year must have suffered considerably owing to the continued cold wet weather and there must be a great number of prospects who can be lined up now if they are gone after aggressively. Houses which needed painting in the spring and were not done, most certainly need it more now and it will be a big mistake to let your customer put it off again till another spring.

$10.00 More For Paint Now Or $100.00 Depreciation Later?

There is, of course, always the talk of high prices for paint. It is true that prices are high now but the actual increase for a single job over former figures is not a sufficient excuse for a man to allow serious damage to be done to his property. The increase in individual jobs would not average more than $10.00 advance over prices of two years ago. This being the case, there is no reason why a house or any other building should become shabby, deteriorating in actual value probably 10 times the extra $10.00 involved. The question of actual costs is one which should be studied carefully now by all retailers and an investigation will reveal a situation not nearly so alarming as many think.

If Your Paint is Right—Don't Be Afraid of the Price

Window displays will prove effective just now and don't be afraid to put a selling price on your goods. If they were good value at $2.25 a gallon, aren't they just as good value at $4.00 a gallon now? There's a reason for the advance in price—it will not be nearly so hard to convince your customer that the advance is warranted as you expect. It would be unreasonable for him to think that $2.25 value then is still the same to-day.

Push the Interior Finishes—Brighten the Home For Winter

Other lines coming in for big sales during the fall are the special interior finishes. In the cities the fall is the time for moving and floors, walls, and furniture all come in for their share of decoration. By keeping in touch with the changes in your neighborhood, a lot of nice business can be picked up.

During the long winter months, the majority of one's time is spent indoors. This is a very important reason why every article of furniture, the floors, the walls should all be bright and attractive. The necessary confinement in a house need not become irksome if brightness in decoration prevails throughout.

Distribute the Color Cards—This Advertising Pays—Includes Instructions For Use

Make free use of all literature pertaining to the line of paints which you handle and which can be distributed through the mails or across the counter. The bright color cards are always an attraction and influence many sales by reason of their color appeal only. There are many points brought out in the literature furnished by the manufacturer which the salesman can use effectively in getting these goods across the counters.

Perhaps one of the most important of these is the ease of application. Nearly all the special finishes which are supplied by the various manufacturers can be applied by an amateur—by a woman—what then is an extra 25c or even 50c a tin when the buyer is going to put it on himself or herself? Painting is real fun to the majority and there is no reason why good results cannot be obtained when instructions, clearly given, are followed.

Sell by Power of Suggestion Rather Than Argument

In selling paint, it is well to avoid arguments with your customers. This department of your business requires extreme care in handling and the power of suggestion to your prospects should be strong. In knowing your line thoroughly, you inspire confidence in a prospective buyer which very few of them feel on entering the store. By leading them along carefully, it will be unnecessary to create any argument and this should certainly create a better attitude from both sides of the counter.

Time Devoted to Arrangement of Paint Section Well Spent

Although it is true in a measure that there is always some difficulty in arranging the paint section in a store, it is also true that the time spent in having this done properly will be paid back with mighty good interest. Paint lends itself to an attractive display and it is a big mistake to let sales for this line suffer owing to a lack of appreciation of its possibilities.

See What Results 30 Days' Effort Will Bring

Paint in its many branches should move freely during the next 30 days. Push for this trade energetically and attain results which are satisfactory in every way—they may be a revelation to you; the results, at least, will stand out prominently as the effort is exerted.

U.S. GOVERNMENT TO SUPERVISE OIL AND GASOLINE

The United States Federal Trade Commission may possibly urge the Government supervision of oil and gasoline prices. The Commission received cost of production figures from the larger producing and distributing concerns and has already made a preliminary estimate of costs. It is desired yet to give the oil men an opportunity to present their own statistics.

It is stated on authority that the Government by entering into a voluntary agreement with the industry in regard to fixing prices or under the Food Bill it can place the trade under control of the Fuel Administration, instituting a licensing system. Either plan might result in a lowering of prices to the Government and the public.

BLUE BARRELS

LIVINGSTON BRAND BOILED OILS

"BADEN"
FIRE BOILED

"MONTREAL"
STEAM BOILED

Don't Mistake—there is a difference in boiled oil

When a salesman says there is no difference in boiled oils, make him prove his statement.

Livingston "Baden" Boiled Linseed Oil is sold at a premium of three cents per gallon over the raw, while Livingston "Montreal" Boiled Linseed Oil is sold at only one cent per gallon premium.

Why this difference in premium? The answer is the fire and steam-boiling processes.

Fire boiling is the original "Baden" process which has been tried and proven the best by test for the past half a century.

Steam boiling is the modern method designed to effect speed in manufacture.

There's a difference. Livingston Brand is the standard in boiled oil (fire and steam boiled).

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 11.—Features of the markets interesting the paint trades particularly this week are two—the decline of 50c per 100 pounds in white lead in oil, and the advances in glass. In other respects the markets are not greatly altered from conditions of the preceding week, but turpentine is a good deal firmer, and linseed oil is in very uncertain and unsettled state; so much so, that some firms have withdrawn from the market for this product. There is also an interesting note in connection with the supply of zinc from the United States for use in prepared paints, which may have some bearing on the market for these after the first of the coming year.

Linseed Oil Market Still Very Unsettled

Montreal.

LINSEED OIL.—More difficulty than could be quickly estimated was occasioned by the strike at Fort William terminal elevators in the past fortnight, and, though the strike is over, its effects are still telling upon Montreal business, especially as regards linseed oil. Some firms have withdrawn from the market altogether until more definitely settled conditions become apparent as to linseed oil. Some are still quoting the same prices as last week. There is no tendency to lower prices as far as the wholesale trade is concerned for the immediate present. Crushers have reported an easier market, and in some cases quite noticeable demand for oil, but the flaxseed has been coming in slowly, and there is much uncertainty as to supplies. Very little, if any, flaxseed reached Montreal crushers by water this season, and it is possible that the two cargoes expected between now and close of navigation may be all that can come by water until next season. There is, therefore, some apprehension that the railroad situation may prove troublesome again this winter, with consequent firming of markets for linseed oil. Against the firming factors in sight may be set the fact that the Canadian Government latest flaxseed crop estimates place the yield at 10,000,000 bushels, or some 4,000,000 bushels better than last year's, while the Argentine estimates are 40,000,000 bushels, or double the crop of last year in that country. If the seed supplies can be secured and brought to the mills the oil market might be easier, but difficulties of transportation are already almost a foregone conclusion. At present there are only 180,000 bushels of old crop flaxseed at Fort William, and holders of seed are holding firm. There is also the probable United States demand to consider. It is quite conceivable that the United States, being short of flaxseed, may draw off from Canada fully the four million bushels of crop surplus over last year's estimate, and thus no one in touch with the linseed oil situation is to-day willing to predict lower prices, while for the immediate present the market is firm at the quotations of last week, viz.:

Linseed oil.	Per Imperial gal. Raw.	Boiled.
1-4 bbls. ...	$1.40-1.46	$1.42½-1.49
5-9 bbls. ...	1.39-1.45	1.41½-1.48

Turpentine Up, And In Firmer Market

Montreal.

TURPENTINE.—Firm market for turpentine, and increasing scarcity of this product in the South, are the market features in this direction this week. The outlook is said to be towards still higher prices. While it may be possible to purchase turpentine for immediate needs and in small bulk at prices equal to the higher quotations of the past week's report, there are very strong views held to the effect that even these prices are low, and that it is, in fact, not possible to get turpentine laid down in Montreal in decent-sized lots at less than 68c per Imperial gallon car-load price, the figure 68c being the high quotation for turpentine to the retail trade last week. Pending the definite development of the much firmer tone noted, some vendors had not changed their quotations of last week, but the majority of merchants quoting gave from two to four cents higher in price for this week, making the range as under for quantities and the price to retailers requiring small supplies from 73c to 75c per Imperial gallon:

Turpentine.	Per Imp. gallon.
1-5 bbls.	$0.66 to 0.70
5-9 bbls.	0.64 to 0.68

White Lead In Oil Has Declined 50c

Montreal.

WHITE LEAD IN OIL.—Owing to the declining tendency in pig lead, and in spite of the uncertainty in linseed oil, the market for white lead in oil has registered a further decline this week. The drop is 50c a hundred pounds. Of late there has been a hand-to-mouth condition of market as to buying of white lead in oil, the price being considered high for the purchasing of more than requirements from time to time. The decline may bring about heavier demand. It is pointed out by an expert on paint trade products that while white lead prices may be high in terms of dollars and cents, they are low in terms of country produce—a farmer being able to get more white lead for a given quantity of say, butter, cheese, or eggs, than he could in the days before the war for the same quantity of these country products. The new prices on white lead in oil are as follows: Government standard white lead in oil, in five-ton lots, $17 per 100 lbs.; in one ton lots, $17.30 per 100 lbs.; in lots of less than one ton, $17.60 per 100 lbs.

Advances In Glass Have Taken Place

Montreal.

GLASS.—There have been changes in the price of glass. As pointed out in HARDWARE AND METAL recently, the market for glass has been steadily firming owing to labor shortage, fuel and material cost, etc. The following new list and discounts apply in Montreal now:

Glass, per 100 feet— Bracket—	Single thick	Double thick
25"	$10 75	$15 60
26 to 34	11 20	16 85
35 to 40	11 70	17 85
41 to 50	15 40	20 35
51 to 60	16 10	20 80
61 to 70	17 20	22 05
71 to 80	19 35	24 10
81 to 85	....	29 85
86 to 90	...	31 95
91 to 94	....	32 80
95 to 100	....	38 05
101 to 105	....	42 00
106 to 110	....	48 55

F.o.b. Montreal. Ordinary trade discount 20%. Retail hardware 25% off.

Putty Market Firm For The Time Being

Montreal.

PUTTY.—With the market for linseed oil in a condition of uncertainty, there are doubts as to the probabilities in regard to putty, and the market tone is inclined to firmness for the present. Should linseed oil eventually come into decidedly easier market, it might have the effect of reducing quotations for putty, though this is considered unlikely at time of writing. Putty quotations remain as mentioned last week as follows: Standard putty bulk, in barrels, in 5-ton lots, per 100 lbs., $3.25; in 1-ton lots, per 100 lbs., $3.40; in lots of less than a ton, per 100 lbs., $3.60.

Prepared Paint Market Keeps Firm

Montreal.

MIXED PAINTS.—The market for mixed paints remains steady at the quo-

When You Total the Year's Paint Sales

Is the result one that pleases you? Or do you feel that you are not doing as well as you should?

A frequent turnover of your stock is most important in the successful conduct of a paint department—in fact, it is absolutely essential.

B-H "ENGLISH" PAINT
70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

is sold nearly every day of the year.

It is more widely advertised than other paints, and because of this publicity and the intrinsic merit of the paint itself, is better known and more frequently purchased than any other.

B-H "English" Paint, is in consequence, the logical paint to sell if you desire steady sales and good-looking figures on the right side of the ledger.

We would like to hear from a progressive merchant in any town where we are not represented.

BRANDRAM-HENDERSON LIMITED

MONTREAL HALIFAX ST JOHN TORONTO WINNIPEG CALGARY EDMONTON VANCOUVER

If interested, tear out this page and keep with letters to be answered.

tations and under the conditions mentioned last week. It is not considered at all likely that there will be any lower prices to quote for mixed paints for spring, 1918. At present some good spring bookings are being made at present prices, which are in relation to the advances of other goods known to country and city commerce quite reasonably low. With the cost of containers as well as of ingredients still decidedly high, and on the firming trend in many cases, the chances of lower-priced paints are considered small for some time to come, short of some quite unforeseen eventuality.

TORONTO

TORONTO, Oct. 11.—Of prime interest in the paint trade during the week has been the decline in white lead in oil amounting to 50c per hundred pounds and the peculiar situation with respect to linseed oil. While sales of linseed oil for future delivery have been quoted considerably lower in large quantities by the crushers, the spot situation is somewhat strong, owing to the inability of crushers to get seed. This hold-up in seed has been caused partly through the strike at the elevators at Fort William and partly through lack of sufficient lake transportation. As a result some of the dealers have withdrawn from the market temporarily, as their stocks of linseed oil are light. Glass is in firm position. Demand on mixed paints is reported as improving for the fall trade.

Peculiar Situation In Linseed Oil Market

Toronto.

LINSEED OIL.—A peculiar situation has developed in the linseed oil market during the week in that future oil is quoted lower by crushers to the extent of 10c per gallon over last week, still there is a scarcity of spot stock oil and some dealers have withdrawn from the market entirely for the present. Crushers are finding it difficult to get supplies of seed owing to the recent strike at the head of the lakes and also inability to get lake space. Now that the strike has been settled it is expected conditions will take a turn for the better. Some jobbers reduced their quotations during the week from $1.49 to $1.42 per gallon in single barrel lots. Concerns who were quoting on the basis of $1.40 last week have withdrawn from the market temporarily. One concern was still quoting on the basis of $1.49. The net result of the condition is that for the time being the lower quotations on oil have disappeared and the range is narrowed from $1.42 to $1.49. In the flaxseed market at Winnipeg, there was a decline of 14½c per bushel on the October option during the week, making the quotation on Wednesday of the present week $2.92½. December option is quoted down to $2.77½. With wheat at $2.21 per bushel, flaxseed is considered a cheap commodity comparatively at prevailing prices. There has been a fair demand for oil during the week. With better arrivals of seed easier prices on oil should be in order.

	Raw, per 9 lbs.	Boiled, per 9 lbs.
1 to 2 bbls.	$1.42-$1.49	$1.44-$1.52
3 to 5 bbls.	1.41- 1.48	1.43- 1.51
6 to 9 bbls.	1.39- 1.46	1.42- 1.49

Turpentine Firmer; Advances Recorded

Toronto.

TURPENTINE.—There was a firmer position throughout the market for turpentine during the week, due to advances which took place in the primary market at Savannah. Advances in the latter market during the week amounted to 1½c per gallon. Wholesalers in certain instances advanced their prices 1c per gallon, thereby increasing the range from 66c to 71c. While quotations were made as low as 66c at the time of writing, intimations were made by the dealers that their prices would in all probability advance before the week was out. There has been a fairly good demand for turpentine during the week.

	Imp. gal.
1 barrel	$0.66-$0.71
2 to 4 barrels	0.65- 0.70
5 gallon lots	0.74- 0.79

White Lead In Oil Declines 50c Hundred

Toronto.

WHITE LEAD IN OIL.—Lower prices on white lead in oil were made effective during the week, the decline amounting to 50c per hundred pounds. Selling prices are accordingly now at $17.50 per hundred pounds in ton lots and $17.80 in less than ton lots. The decline follows a sagging tendency in the pig lead market. Demand for white lead in oil is reported as somewhat light.

Mixed Paint Demand Reported Improving

Toronto.

MIXED PAINTS.—With continued good painting weather manufacturers report the demand so far this fall has been quite satisfactory, in one instance a considerable improvement being recorded over the sales to date as compared with last year. Prices remained in a steady position with no indication of a change in the near future.

Glass Prices Are In Firm Position

Toronto.

GLASS AND PUTTY.—A firm position in the local glass market was maintained during the week. Further advices from the manufacturers to wholesalers intimated that there was a strong probability of additional advances being recorded in the near future over the one noted last week. Wholesalers have their old contracts pretty well cleaned up, it is understood, and any new purchases that are made will have to be on the higher basis. Intimation is made by wholesalers that there is strong probability of prices being advanced in the not distant future. Plate glass and fancy glass remained unchanged. Quotations on window glass is still being made at 50 per cent. off list and 40 per cent. on cut lights.

Putty prices remained unchanged at those given in current quotations.

Wood Alcohol Goes To Lower Levels

Toronto.

WOOD ALCOHOL.—As the result of lower quotations recently made by manufacturers of wood alcohol, wholesalers in some instances reduced their prices during the week 40c per gallon, making the low quotation $1.75 per gallon. High quotations ranged to $2.15 in single gallons. Demand for this product has been somewhat light.

WHOLESALE HARDWARE ASS'N MEETING

C. A. Whitwam

The annual meeting of the Canadian Wholesale Hardware Association was held in Montreal last week. Officers for the ensuing year were elected, much business was transacted and a general discussion of trade problems took place. Following last year's procedure the usual banquet was not held. The office of vice-president was the only one to be changed from last year's officers. Accordingly the officers for the coming year will be; President, Joseph W. Dowling of Caverhill, Learmont & Co., Montreal; vice-president, C. W. Whitwam, Hobbs Hardware Co., London; executive committee, George C. Davis of Frothingham & Workman, Montreal; H. Edmund Dupre of Chinic Hardware Company, Quebec; Norman Howden of D. H. Howden & Co., London, Ont.; Robert Starke of Starke, Seybold & Co., Montreal; Thos. M. Birkett, Jr., of Thos. Birkett & Sons, Ottawa; secretary, James Hardy, Toronto.

NO OIL SHORTAGE

That there is not the slightest danger of a deficiency in the supply of either of crude oil or its products, kerosene and gasoline, for the use of the Entente Allies in the war, is the opinion of A. C. Bedford of New York, President of the Standard Oil Company who recently expressed that conviction in an address delivered before the War Convention of the American Chamber of Commerce. Mr. Bedford pointed out that the United States was consuming crude oil at the rate of over 330,000,000 barrels a year while the annual production in that country amounts to 312,000,000 barrels. In addition there was in storage in the United States on July 1, 164,590,942 barrels of petroleum.

"It will thus appear" added Mr. Bedford, "that, with the stocks above ground and given the present rate of production and consumption, the supply is sufficient to insure us having enough oil for at least the next five years, provided production is fairly maintained."

MOORE'S

House Colors

Get the Fall Fair to help you sell *Moore's* House Colors

In your booth at the Fall Fair plan to set aside space for a good, snappy display of Moore's House Colors. Put it up to us to supply you with the necessary display cards, color cards, etc. This will not require to be a big display, and it will cost practically nothing.

Make it strong and effective and you'll feel the benefit of it not only this Fall, but next Spring as well.

Lengthen the Life of Metal Work

It is a hard problem to keep rust and corrosion from eating the very life out of metal structures, therefore, economy demands the best possible preventive against these destructive elements.

CARTER'S
Dry Red Lead

gives a perfect sealing coat that absolutely protects all kinds of metals from the elements that destroy them, and immeasurably lengthens the life of Metal Work.

We make Orange Dry Lead and Litharge,

Special Dry Lead and Litharge, for Color,

Varnish and Rubber makers,

Oxides for Potters and Storage Battery Makers.

All products are wholly Canadian made and highest standard qualities.

Ask for Quotations.

The Carter White Lead Co.
Limited
91 Delorimier Avenue
Montreal

A Free Offer

and one that will show you how to make a profit on your white.

If you are one of the Retail Merchants who are complaining about the fact that there is no profit in handling White Lead, we want you to know that there *is* a *profit* if you sell

PURE SUPERBA WHITE

The Best Blended Lead on the Market

And to prove it we will give you, FREE, with each 200 pounds of Pure Superba White you order, a 5-pound tin of Pure Superba White, which you can give to your painter customers to try out.

This is an opportunity to convince every practical painter in your district of the advantages of this High-Grade, Guaranteed Blended Lead. *It means a good profit to you.*

Prices are liable to advance any day, so send in your order now.

Stephens' SILKSTONE

(REGISTERED TRADE MARK)

FLAT WALL COLOURS

Educate Your Customers?

There are a lot of people who use Kalsomine merely because they have always used it and are not aware that science has advanced the art of wall finishing.

Dealers would be well rewarded by earnestly and constantly educating their customers to appreciate the advantage of using a modern scientifically prepared wall finish like **SILKSTONE**.

SILKSTONE FLAT WALL COLOURS (**"smooth as silk—hard as stone"**) were originally made to replace Kalsomine and other unsatisfactory distemper colors, and to give all those who paint an interior wall finish easier to apply than Lead and Turpentine.

SILKSTONE is thoroughly and efficiently justifying its existence, and is favored among wall finishes throughout Western Canada.

Sell SILKSTONE to your customers. They'll surely decide that the SILKSTONE WAY is the ONLY WAY to finish their walls. You'll increase your business, satisfy your customers and make bigger profits pushing SILKSTONE quality wall finishes to the front.

Get in Touch with us if you haven't the Stephens' Agency.

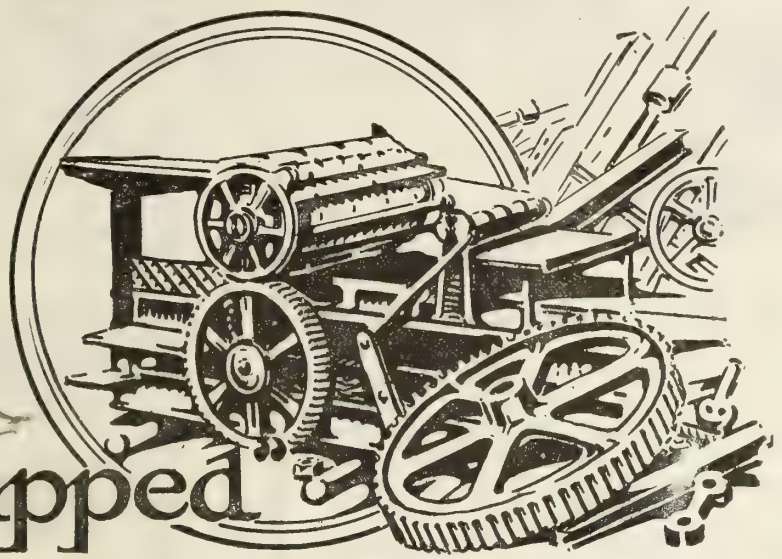
Out-of-date machinery, time-worn methods, inefficient systems, have no place in modern business. Competition demands that they be scrapped.



"Scrapped"

IT is an established practice to-day in manufacturing to discard or "scrap" comparatively good machinery, if it is found that a newer machine will accomplish better results more economically. Competition demands it. The cost of the new machine, however, is a good investment. It saves its price many times over in reducing labor, saving time and money, in addition to producing a product of better quality.

• • •

Extend the same practice throughout your establishment.

• • •

"Scrap" the time-worn method of handling business records by means of padded forms, duplicating books, loose sheets and carbons. It is inefficient, costly, and unnecessary.

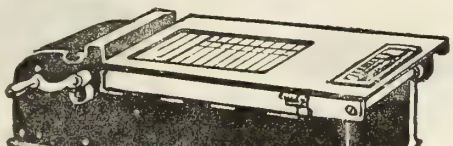
The "Shouperior" System of Autographic, Registers, for executing all kinds of business records, wherever they are required in multiple sets, is more efficient. It not only offers greater speed, convenience and economy, but ensures absolute protection of records

• • •

The "Shouperior" System can be adopted for use in any line of business. By manufacturers, wholesalers, or retailers

• • •

Various sizes and styles of registers are made which will produce at a single writing from two to a dozen legible copies of the original entry made by either pen, pencil, or typewriter. Assembling of forms, blanks, carbon paper, etc., is entirely eliminated—the execution of one set of forms automatically preparing the next set, carbon paper and all. In fact, all detail is eliminated except the actual writing itself.



SHOUPERIOR
Autographic Registers
A System for Executing Business Records

Send us Samples of the printed forms for the system you are now employing. We will gladly submit for your approval a plan of operation by means of the "Shouperior" System. This will place you under no obligation. Drop us a line to-day. Literature upon request.

The Businessman's Mind

BANKERS are supposed to have a particular character of mind; Lawyers and Doctors likewise; Teachers also. These minds have both narrowness and breadth. They see widely and deeply in their own realms, and narrowly and sometimes shallowly in regard to matters outside their particular worlds. At least, this is the common supposition.

THE Businessman—What should be the character of this mind? —What is the mind of the Manufacturer, the Wholesaler, the Retailer? Certainly the Businessman's mind should be broad. It should be something of the Banker's, something of the Financier's, something of the Statesman's. The Businessman should see broadly. The horizon of interest and of inquiry for him should be a far one.

The happy thing about it is that the business man—manufacturer, jobber, retailer—can have the far outlook—this by the reading each week of a newspaper with a far outlook—

The Financial Post of Canada

This is a business man's paper—it is a paper for bankers, for investors, for trustees, for financial men. But it is also a newspaper for **merchants**, very much so.

Merchants need to know markets and market tendencies and market factors. They need to know conditions, local and remote. They need information to buy right and to sell safely.

And the knowledge they need they can have for the insignificant sum of $3 annually.

THE FINANCIAL POST is a most readable paper—positively enjoyable to the layman reader. It makes any man broader minded, and every business man a bett business man. Growth in bigness at $3.00 a year!

Send for free sample copy to the Publishers, or sign and mail the attached coupon.

THE FINANCIAL POST OF CANADA

OVER 50,000 COPIES PER MONTH

Canadians

should be thankful that our Country has a Canadian Magazine fit to take its place in the company of the big American magazines — a magazine equalling in interest and literary merit the big magazines produced in a Country of 100,000,000, where it is possible to obtain $1,000 to $5,000 a page per issue or more for advertising space.

THE making of MACLEAN'S MAGAZINE month by month, year after year, has been hard labor. One difficulty was to get the right sort of matter—Canadian in origin and theme. A few years ago our country possessed few writers and artists of trained and high ability. To-day, thanks very largely to MACLEAN'S MAGAZINE, we have men and women writers and artists producing first-class work; they developed when they found a medium demanding a grade of work equalling the best contributors to American magazines. Also, the Canadian writers and artists who were finding a market for their wares in the United States turned to MACLEAN'S when this magazine showed itself to be a sufficient and creditable vehicle for their work.

The future has a good crop of A1 Canadian writers and artists in store, whose work will appear in MACLEAN'S; but consider these names of Canadian men and women who have already "arrived," and whose work appears in MACLEAN'S MAGAZINE:—

Sir Gilbert Parker,	**E. Phillips Oppenheim,**
Arthur Stringer,	**Peter McArthur,**
Arthur E. McFarlane,	**L. B. Yates,**
Stephen Leacock,	**Geo. Eustace Pearson,**
Robert W. Service,	**W. A. Craick,**
Alan Sullivan,	**H. F. Gadsby,**
Agnes C. Laut,	**C. W. Jefferys,**
L. M. Montgomery,	**J. W. Beatty,**
"Janey Canuck,"	**Arthur William Brown,**
A. C. Allenson,	**Lou Skuce.**

These are some of the names of Canadian men and women—writers and artists—who are doing work of the highest class, acceptable to the hardest-to-get-into publications of the United States. Ten years ago such a Canadian galaxy had no existence.

BESIDES these professional writers and artists—men and women who depend on their pen and pencil and brush for their livelihood—is a big host of others who write only when successfully urged to do so—because they have something to say that is worth saying. These are usually men in a big way of business, or professional men at the top of the ladder, or men and women doing unusual work of a most important sort—often obscurely because they are not self-trumpeters of their achievements or labors. For example, such men and women as:—

THE LATE SIR MORTIMER CLARK
JOHN BAYNE MACLEAN
ERMAN J. RIDGWAY
LORD NORTHCLIFFE
JOSEPH MARTIN, M.P.
BILLY SUNDAY

All these have contributed under their own name or a nom de plume to MACLEAN'S MAGAZINE in the last 12 or 15 months, recognizing that this magazine can give their messages to the whole nation, and to a class of persons whom they wish to reach.

NOBODY who knows MACLEAN'S would ever call it a story magazine, but rather a national magazine—almost a news magazine. Stories there are in every issue—enough of them to satisfy the right and natural desire for romance, adventure, achievement, business, love and intrigue. But the greater part of the contents of every issue of MACLEAN'S MAGAZINE may be called **NEWS**—NEWS of men and their work and triumphs; news of the nation's work and workers; news of discoveries; news of movements; news of politics; news of the builders and building of Canada. MACLEAN'S, as Canada's National Magazine, prepared for thinking and intelligent men and women, must be an informative and interpretive magazine, must mirror national opinion, record national affairs and developments, and be the **VOICE** of prophets, statesmen and leaders. MACLEAN'S is a magazine of to-day—a newspaper of a sort, dealing with big news passed over by daily newspapers whose function is the recording of the day's news—passing news; and who leave the fuller statement—the summed-up presentation of things they can but touch on—to MACLEAN'S MAGAZINE.

A Magazine *of* Power

News features of MACLEAN'S MAGAZINE greatly liked by its 50,000 readers are

The Business Outlook—article.
The Investment Situation—article
The Review of Reviews Department.
The Nation's Business.
Women and their work.

These are regular department features appearing in every issue of MACLEAN'S. They are of the nature of surveys or digests, and perform a service welcomed and praised by all readers who aim to keep themselves broadly informed concerning what's doing in Canada and what's being thought and said and done the wide world over.

REVIEW of Reviews is the outstanding feature of MACLEAN'S, in that it gives the best articles, in condensed form, from the best magazines of the world. A staff of trained people read and study the contents of all magazines and select for each issue of MACLEAN'S twenty or more articles which mirror the world's progress and present the changing aspects of world opinion.

IN rounding out this presentation of Canada's National Magazine a brief reference may be made to one large and discriminating and important class of contributors to it—advertisers. Literally hundreds of them employ MACLEAN'S for their advertising, to reach the influential classes represented by MACLEAN'S list of subscribers, and because they get national publicity economically. These makers and producers of goods of national consumption appreciate the fact that a select circulation of 50,000 gives them, among the most important families of Canada, strong local publicity as well as broad national publicity, and that retail distributors are both canvassed and assisted by their national advertising in MACLEAN'S MAGAZINE. They recognize that $1,000—$3,000 invested in space in MACLEAN'S MAGAZINE to buy 365-day national influence is dirt cheap publicity.

THIS is but condensed presentation of MACLEAN'S MAGAZINE. Very much more can be said about its editorial policy and character, about its making, about its quest for and development of new contributors, about the policy that keeps canvassing methods and advertising columns clean, about the hearty approval of subscribers of MACLEAN'S MAGAZINE, about the significance of 50,000 circulation, about the wisdom of doing a "little advertising in a few magazines" as an initial step in national advertising plans; about the advertising of MACLEAN'S MAGAZINE in all the MacLean Publishing Company's list of business and technical newspapers, about the influence of MACLEAN'S MAGAZINE on distributors.

But time and space forbid here and now a continuation of the MACLEAN story. What is enough to be impressed is—

THE "WANT" AD.

The "want ad." has grown from a little used force in business life into one of the great necessitities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The "want ad." gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

If interested, tear out this page and keep with letters to be answered.

"I have entered a new world"

"PERHAPS I had to reach my fortieth year to waken up. But whether or not that is the explanation, I have entered a new world of interest and advantage. I read daily newspapers, of course, but I now read THE FINANCIAL POST, and I am frank to say that this weekly newspaper has given me a new consciousness—a new horizon. It has admitted me to a brand new world."

So spoke an ordinary man—perhaps an average man. He was concerned for half a life-time with the things of his daily life, and felt small impulse to become acquainted with a wider, richer realm—the world that bankers, financiers and big business men live in. He did not see that the world of these men was also his world.

By chance, as it were, he became acquainted with

The Financial Post
Of Canada

So his worlds of interest and knowledge were enlarged and his capacity and desire for the kind of news and information provided by THE FINANCIAL POST were enlarged.

The $3.00 a year that it costs him to subscribe to THE POST counts for nothing; what does count is the growing bigness of this man—growth at $3.00 a year!

NO matter what your age or business, THE FINANCIAL POST is for you—to enrich your mind, to deepen your thinking, to broaden your field of knowledge and endeavor.

THE FINANCIAL POST OF CANADA 1917
143-153 University Avenue, Toronto.

Please enter me as a regular subscriber, commencing at once. If I am satisfied with the paper I will remit $3.00 to pay for my subscription on receipt of bill.

Sell Handles that are Most in Demand

STILL'S

There are more of STILL'S HANDLES sold in Canada than any other make. What's the logical conclusion of this fact?—*they are the best.*

There's a Still Handle to meet every need: Axe, Pick, Sledge and Hammer Handles; Cant Hook and Peavie Handles.

There's nothing like selling the best of everything. Good profits in our handles, too.

J. H. Still Mfg. Company

ST. THOMAS -:- ONTARIO

Wanted

SITUATIONS VACANT

WANTED—HARDWARE MAN FOR RETAIL only; must be fair salesman and window dresser. Ambitious beginner with couple years' experience would do. Box 496, Hardware and Metal.

FOR SALE

THREE-DRAWER NATIONAL CASH REGISter for sale—good as new, $375.00. Address Box 74, Odessa, Saskatchewan.

HAVE 200 CASES AMERICAN BLUED CANada plates for sale. J. A. Brownlee & Co., London, Ont.

ORDINARY CANADA PLATE, ENGLISH make—25 cases 18" x 24", $13.00 per case. Duncan Munn, Ripley, Ont.

FOR SALE—WELL ESTABLISHED HARDware, tinware and plumbing business in good Ontario farming district. Stock in good condition. Apply Box 488, Hardware and Metal.

POSITION WANTED

POSITION WANTED AS MANAGER OF REtail hardware store or travelling salesmen, Alberta or British Columbia preferred. Address Box 495, Hardware and Metal, Toronto or Winnipeg.

WANTED

WANTED TO BUY—GOOD, LIVE ONTARIO hardware business, or would take interest in live business and assume management if owner wished to retire from active duties. Address Box 494, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

The next time you want a clerk, be sure to advertise in the "Wanted" Page of HARDWARE AND METAL. You will receive inquiries from the livest clerks in the Canadian hardware trade, because reading HARDWARE AND METAL is a test of the clerk's interest in his business.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITERS WRITE ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

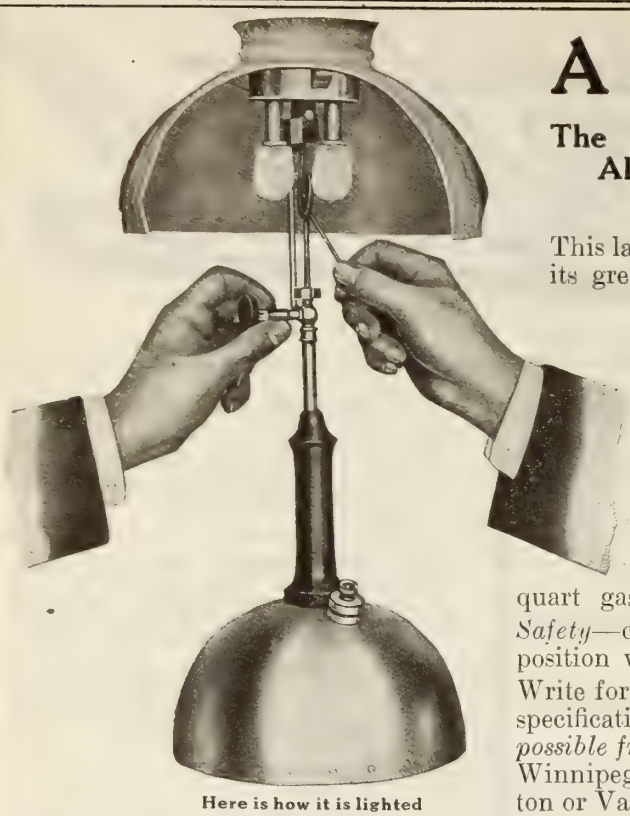
WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!

The Lamp that threw the Alcohol Torch into the discard.



Here is how it is lighted

This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power.

Safety—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton or Vancouver and cover yourself for Fall and Winter requirements.

Gives Years of Continuous Satisfactory Service—

WHILE mother is running the machine out of the garage the doors are locked securely open by STANLEY GARAGE DOOR HOLDERS No. 1774. No chance for a brisk Fall breeze to swing the door a crashing against the car. A pull on the chain by the youngest of the family easily shuts the door.

STANLEY GARAGE HARDWARE

is the necessary equipment for every modern garage.

STANLEY Garage Hardware is made by the oldest and largest manufacturers of wrought steel hardware in the world and is designed especially for garage use.

STANLEY Hinges and Butts make certain that the doors will swing easily and will stay weather tight.

STANLEY Bolts fasten the doors shut securely.

STANLEY Latches and Pulls are well proportioned, strong, and convenient to operate.

STANLEY Garage Hardware is well known; it has a splendid reputation and *is in demand.*

TO-DAY write for booklet "Selling More STANLEY Garage Hardware." It's prof.table reading!

The Stanley Works

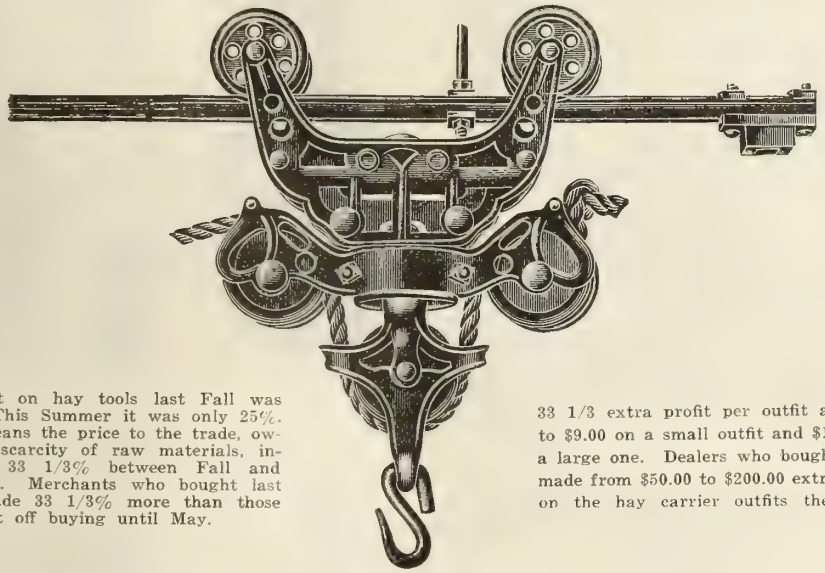
New Britain **Conn., U.S.A.**

Canadian Representatives:

A. MacFarlane & Company, Coristine Building, Montreal

BT Pumps Churns Washing Machines Hay Carriers
Ladders Barn Door Tracks Tanks Hog Troughs

$9.00 to $18.00 Extra Profits



Discount on hay tools last Fall was 40%. This Summer it was only 25%. That means the price to the trade, owing to scarcity of raw materials, increased 33 1/3% between Fall and Summer. Merchants who bought last Fall made 33 1/3% more than those who put off buying until May.

33 1/3 extra profit per outfit amounts to $9.00 on a small outfit and $18.00 on a large one. Dealers who bought early made from $50.00 to $200.00 extra profit on the hay carrier outfits they sold.

Buy Your Stock on Hay Tools Now

Because of the shortage of steel and high price of malleable iron, prices are sure to go up again soon.

There will be a shortage of hay tools next year, just as there was a shortage this year and the year before. We will fill all orders in their turn. Those who order first will get their goods first.

July 1st terms are given on hay tools ordered now for delivery before May 1st.

You will make an increased profit of from $9.00 to $18.00 by ordering now, and you will be sure of your stock for the hay tool season next summer.

Order from our salesman or nearest branch.

UNIVERSAL

In Ye Old Days

a fire-place was absolutely requisite to a piping hot cup of coffee. To-day this luxury may be enjoyed in any place or clime by simply unscrewing the cover of a Universal Vacuum Bottle.

Universal bottles may be obtained with three nested cups in cover, making four in all.

The filler is sustained by a spring steel shock absorber which reduces breakage to a minimum.

Actual tests have proven that Universal bottles have the greatest temperature-retaining efficiency.

Demonstrate these wonderful qualities,—show off the beauty of the design and finish —sell more Universal bottles. By so doing you will make more customers and more money.

To insure delivery before Christmas we urge that you order at the earliest possible moment.

"To Sell Files You Must Know Them"

We were impressed when reading this sentence recently.

The truth of it explains why some hardwaremen hold their tool trade against all comers.

They know the good qualities of every tool they handle.

To them "Famous Five" Files bristle with good points (figuratively as well as literally). They will tell you of their fine balance; of the hardness of the steel and the accuracy and sharpness of their teeth. The advice of these men is absolutely sound in regard to the best file to use for a job.

We are proud of the fact that all such hardwaremen sell "Famous Five" Files. They know them and specify them when ordering.

PEERLESS PERFECTION

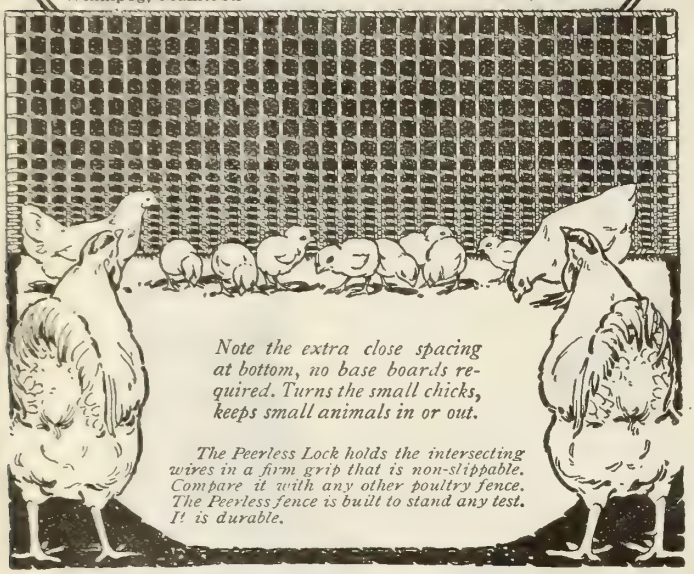
The fencing upon which you can **build a reputation** and hold the fence trade of your territory. You can put up the strongest kind of a guarantee—we back you up.

We build this fence of open hearth steel wire with all the impurities burned out and all its strength and lasting qualities retained. Peerless poultry fencing is extra strong, heavily galvanized, can't sag, won't rust, never gets out of shape, keeps in and keeps out—both great and small.

Write for Dealer's Proposition

We show you where the big trade is for parks, lawns, cemeteries, fences plain and ornamental for farms, ranches, all purposes.

THE BANWELL-HOXIE WIRE FENCE CO., Ltd.
Winnipeg, Manitoba Hamilton, Ontario



Note the extra close spacing at bottom, no base boards required. Turns the small chicks, keeps small animals in or out.

The Peerless Lock holds the intersecting wires in a firm grip that is non-slippable. Compare it with any other poultry fence. The Peerless fence is built to stand any test. It is durable.

"Belleville" Hardware

A "Made-in-Canada" Product Equal to the Best in the World

We are all apt to look up to imported goods as superior to home-made lines. Pause before you concede anything to foreign products over "BELLEVILLE" HARDWARE. Here is a Canadian-made product that is as good as the best.

"Belleville" hardware is meeting the demand of the most particular architects and builders, and is recording wonderful success throughout Canada. It is a worthy Canadian product, worthy of the best Canadian patronage. All hardware looks very much alike to builders and architects until they have had experience with "Belleville."

Best line for dealers to handle. Has greatest demand. Get our proposition.

If interested, tear out this page and keep with letters to be answered.

Polarine Packages that Build Business

There is a Polarine container with which you can meet the requirements of every customer for lubricating oil.

The gallon size, flat shaped can, is the one called for by many motorists. This flat shape with nozzle in the corner makes it convenient for pouring oil.

The special half-gallon size has the flat shape, too. It is intended particularly for Ford cars and will fit snugly under the seat. No car should go on the road without one of these half gallon cans filled with a reserve supply of Polarine.

The 12½ gallon steel keg makes it possible for you to sell the motorist who keeps his car at home in his own garage. It is equipped with a reversible plug faucet and does not leak or take up much room.

These containers make the Polarine line a clean, quick selling and profitable one for hardware dealers to build a business in Automobile Lubricants.

Polarine is manufactured in two grades—Polarine and Polarine Heavy.

Country wide advertising in newspapers, farm papers and motoring magazines is teaching the new army of motorists each year that Polarine is the best insurance they can have against motor troubles.

33 1/3 per cent. profit or more according to the quantity sold is the Polarine proposition which is influencing many hardware dealers to add our Automobile Lubricants to their stocks.

By stocking Automobile Lubricants you can get in touch with a larger number of Customers to whom you may also sell your regular Hardware line, which means still greater profit.

Write us at Room 704, Imperial Oil Building, Toronto, for complete information about our Dealer's proposition.

A Sign That Helps

Some of our customers find that the Hercules Dynamite sign, placed on the outside of their stores, helps to increase their sales of dynamite. If you sell Hercules Dynamite to farmers and are not supplied with one of these signs we will gladly send one if you ask for it.

If you are not a customer we want to interest you in the sale of

HERCULES DYNAMITE

to farm customers. It is proving a profit-maker for merchants throughout the country. Many of these men hesitated at first to do business in such a commodity. Now they know that their objections and fears were groundless.

We stand ready to assist you in many ways to build up this department of your business. A Hercules sign in front of your store will help attract trade. Free advertising matter of various kinds will be supplied. You will have the assistance of our extensive advertising in farm papers which is continually increasing the use of dynamite on the farm. Fill out the coupon below. Mail it today and we will give you our active co-operation.

THE LITE-A-FORD

A Quick Selling, Highly Profitable Accessory for Ford Cars.
An Efficient Dimmer at High Speed.
An Effective Intensifier at Low Speed.
A Sure Prevention Against Burned Out Bulbs.

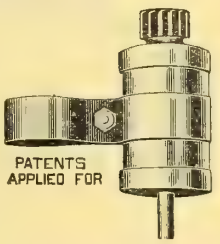
Any Degree of Light at Any Speed

Two of the most important problems confronting the Ford owner are efficient lights when negotiating bad roads at low speed and lights dimmed to legal requirements at high speed.

The Lite-A-Ford solves both automatically without any attention or effort on the part of the driver, and further, eliminates the trouble and expense of burned-out bulbs through excessive voltage at high speed.

The Lite-A-Ford is covered by a broad and positive guarantee that enables the dealer to refund the purchase price if not entirely satisfactory.

Consideration of the above details will quickly convince any live dealer that the Lite-A-Ford is an accessory that will return good profit on easy sales.



Write to-day for prices and terms.

AUTO ACCESSORY AND SPORTING GOODS SECTION

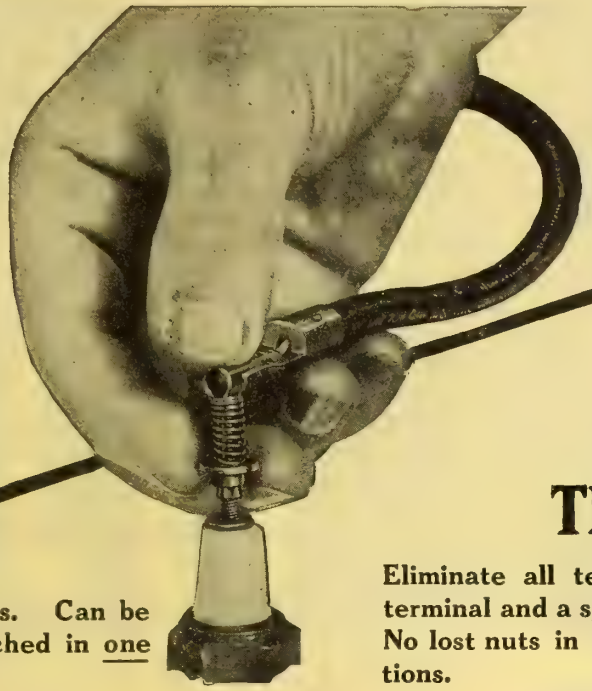
35c. each



No burned fingers. Can be attached or detached in one second.

The HANDY TERMINAL

Eliminate all terminal troubles. A cable terminal and a spark plug terminal all in one. No lost nuts in drip pan. No loose connections.

Most ignition troubles can be traced directly to loose connections caused by vibration and jar. The Handy can't work loose—the greater the vibration the tighter the jaws of the Handy grip—the better the electrical contact.

The jaws of the Handy are threaded on the inside and engage the threads of the Spark Plug Center bolt. To detach the Handy, simply raise the ring and lift off the terminal. Lifting the ring compresses the spring and releases the jaws. One motion does it. To attach the Handy, lift ring—slip jaws over center bolt nut and release ring. Either operation takes but *one* second's time. No pliers or tools necessary.

There are no loose parts to the Handy—no nuts to burn your fingers or to fish out of the drip pan. The jaws of the Handy grip along the entire length of center bolt.

The method of fastening the magneto cable is unique and insures a permanent connection. First, the ferrule (adjustable to any size cable), is fitted to the cable and tightened with your pliers. Then the stripped wire is threaded through the copper clip which holds it tight when compressed by your pliers. This gives you a firm, non-soldered connection that will not work loose.

The Handy is the last word in convenience and efficiency. Because they can't work loose you get maximum ignition efficiency at the spark plug.

The Handy Terminal is made in three sizes to fit *every* make of spark plug. They are a necessity for pleasure cars, trucks, motorcycles, motor boats, airplanes, etc.

Handy Terminals are sold by reliable dealers everywhere. If your dealers can't supply you—sent prepaid on receipt of price. In writing please give your dealer's name and name of spark plug used. Price 25c each. Use the convenient coupon *now*.

JOBBERS DEALERS GARAGEMEN

Here is a proposition that sells on sight because it meets a **real need.** They take up but little room, and you sell 4, 6, 8 or 12 at a time. If your jobber can't supply you, send us his name.

AUTO ACCESSORY AND SPORTING GOODS SECTION

IN every class of merchandise there is one brand that comes quickly to the minds and tongues of buyers.

To most car owners the world VULCANIZER is constantly associated with the name of the oldest and largest makers of vulcanizers in the world.

SHALER VULCANIZERS

Every Canadian dealer knows that the increasing cost of tires has increased the demand among car owners for an efficient tire saving device.

Shaler Repair Kits meet this demand. They comprise the one line that includes models for every need.

Each sale of this widely advertised accessory brings a liberal profit and opens the way to continuous additional profit on the repair material that the user must buy from time to time.

There is no competition from the car maker. No car is sold equipped with a tire saving device.

Write Your Jobber

or ask his salesman for complete information about the popular Shaler accessories and the co-operation the manufacturers offer to dealers.

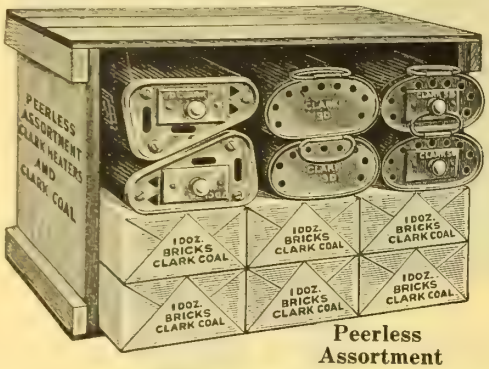
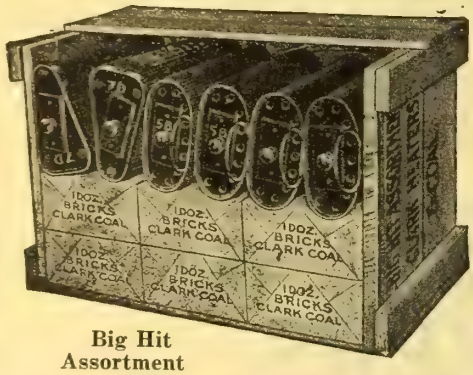
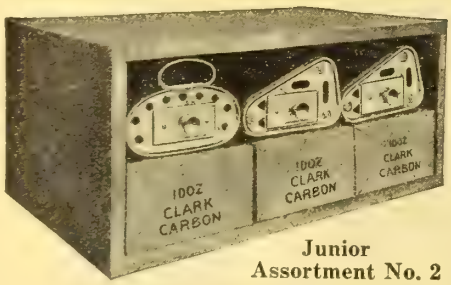
Clark HEATERS



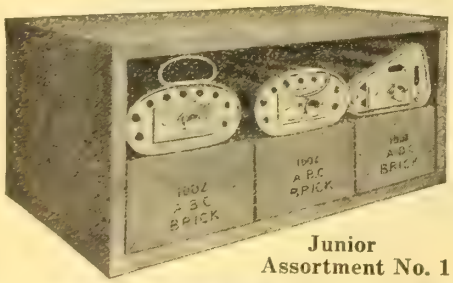
Peerless Assortment



Big Hit Assortment



Junior Assortment No. 2



Junior Assortment No. 1

The Heaters that the Majority of People Prefer to Buy

More *Clark Heaters* are made and sold each year than all other heaters combined. This is sound and sufficient reason why you should "bank" your heater sales on *Clark* products. It positively indicates *greater sales* and *bigger profits* for you.

Clark Heaters are handsome and durable. They fit snugly in at the feet in carriage, wagon, sleigh or automobile. They give a comfortable, easy rest for the feet and the heat chamber is constructed to radiate warmth upward and outward, just where it is needed. **No flame, odor or smoke. Neither is it dangerous or injurious to robes, clothing or anything else.**

Clark Carbon Bricks

A scientifically prepared carbon, densely compressed into bricks and yielding a much higher percentage of heat than any other heater fuel—it is undoubtedly the world's best. One brick in a **Clark Heater** will furnish a strong and steady heat 12 to 16 hours. Yields at least 25 per cent. more heat than any other brick of the same size on the market.

Clark Bricklets

This is a convenient and economical size which does away with the necessity of breaking a large brick when only a moderate heat is required from six to eight hours.

Order now and get in on the big sale that comes with the first of the winter weather. Send for New Clark Heater Assortment. Just right to start sales with. Includes attractive show cards, signs and printed matter with each assortment. See your jobber now.

The moist fall air takes the pep out of the uncapped ignition battery

—store your batteries where you like and so long as the poles are exposed to the air there is a deteriorating, degenerating wireless current passing between them all the time.

—the moister the air the quicker will the life be sapped out of the battery.

—you should protect yourself and your patrons against loss from this spoilage.

—are you doing so by selling only "Master" Batteries?

—with the fall and winter season comes the moist atmosphere, come the days when the batteries play out in the home, in the stores, in the various bell-equipped institutions. Are you ready for this business with "Master" batteries?—the batteries with the protecting cap.

Boost for the "Master" —it will boost for you.

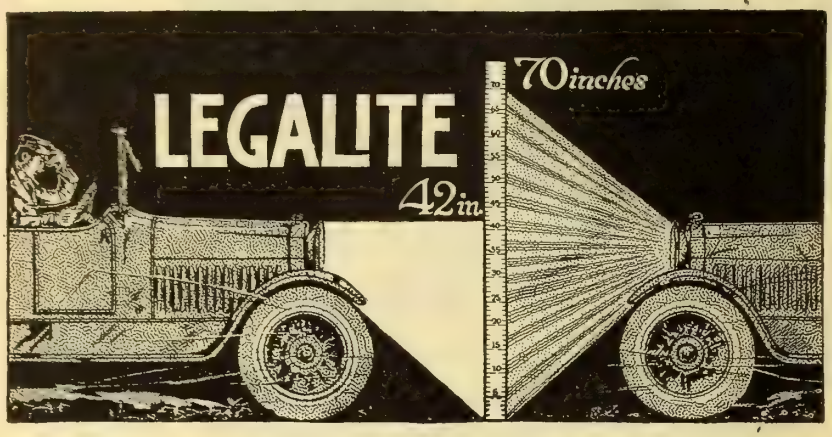
Law Against Glaring Headlights
ON AUTOMOBILES



The following legislation was recently enacted as an amendment to Section 9 of the Ontario Motor Vehicles Act:

"It shall be unlawful to use on a Motor vehicle any lighting device of over four candle power, equipped with a reflector, unless the same is so designed, deflected or arranged that *no portion of the beam of reflected light,* when measured seventy-five feet or more ahead of the lamp, *shall rise above 42 inches from the level surface on which the vehicle stands.*"

Legalite Lenses Comply with the Law

The Legalite Lens, as shown in the above diagram, complies exactly with the recent legislation. With the Legalite Lens there is positively NO GLARE, and light beams are *never more than* 42 *inches* above the ground at *any* distance.

The Legalite Lens gives *more* light and throws all of it where it is needed—ON THE GROUND, even when going up or down hill.

INSURE YOURSELF AGAINST ACCIDENTS

Install a pair of Legalites on your headlights NOW.

PRICES

	Per Pair
7¾ in. to 8⅝ in.	$4.00
8¾ in. to 9⅝ in.	$4.75

Ideas that sold the goods

No. 6 of a Series of Prize Stories by Men Behind the Counter

Satisfied customers are your best salesmen and they're worth all the effort it takes to make and keep 'em satisfied. That's the experience of Leon Strauss, of R. A. Schoenburg & Co., 906 Sixth Avenue, New York City. Mr. Strauss knows how to make a sale. Furthermore he knows how to mix a little ingenuity in with his selling to get *results*. Read his story which follows.

About two weeks ago a steady customer of very peculiar habits, which caused the boys of the place to call him a "grouch," came in to find out if he could get a Trailer light which he could use on the various fixtures throughout the house, and also on his walks about his country home, as he had bruised his face severely the previous evening while going to the barn.

I immediately suggested an Eveready and he refused to even consider it, saying that if I didn't want to sell him what he asked for he could get it elsewhere. I quickly appeased his anger by telling him that we had several kinds of Trailer lights and sockets from which he could make his selection if he would step into the stock room. I picked up an Eveready Miner's Lamp, and on our walk to the rear of the store I kept flashing it. I turned out the electric light by means of a switch in the panel board, explaining that the electric light company were making changes in the meter, and that the lights would probably be out half an hour, but I would take care of that as he could use my Eveready in selecting the cord and socket, while I went downstairs to see how the men were progressing with their work on the meter.

When I again appeared I found him industriously examining the corners of the room, looking back of boxes, and inside his coat with the Eveready. Instead of complaining about my leaving him alone as he ordinarily does when it becomes necessary for me to leave him for a moment, he greeted me with sort of a half-smile and said, "I have no faith in these things, the trouble with them is that when you most need them they won't light." I replied by asking him if he had used an Eveready in the past two years, and he said, "No, I had a light similar to this several years ago, and it almost set me crazy." I asked him to accompany me to the basement where I showed him the distance at which the light would distinguish things. I told him that in the past few years the American Eveready Works had perfected their light to such an extent that they had offered $3,000 for a better name than "flashlight," and if he desired to purchase the light on trial I would be glad to have him do so. I told him that I would accept the return of the light and refund his money, if after five days he should decide it was not all that I claimed it to be.

He took me at my word and when I reminded him that he also wanted a Trailer light he said, "Well, I'll give this a chance first, anyhow."

Since the above incident, this customer has been in to see me on two occasions. Not only has he complimented me on the class of goods I sell, but he has also bought three Eveready lights for the use of members of his family at home, taking particular pains to see that the Eveready trade-mark was on the battery and case.

He requested me to send an Eveready Searchlight to his son who is at present attending boarding school, and he showed me a letter advising him that if he ever wanted to purchase a portable light as a gift for any of his classmates to be sure and see that *Eveready* was on both case and battery.

What Blade Does He Use?

A mechanic enters your store with a requisition slip.

"I want a gross of 12-inch hack saws," says he.

You have 12-inch blades for two dozen purposes, what are you going to give him? And when you do find out what material he is going to cut is it easy to choose the blade that will cut best? It is if you choose from

Starrett Hack Saws

They are standardized. From the information on page 208 of the Starrett Catalog you can quickly supply the blades that cut best.

Whether the mechanic across the counter wants to cut sheet metal or cast iron, brass or tool steel you can give him the finely tempered tungsten steel blade with teeth carefully milled, set and spaced to cut most in the shortest time.

A post card brings a catalog describing the saws that cut faster and last longer. Ask for Catalog No. 21MA.

Sell the Aluminium Your Customers Want

Aluminium is supplanting all other wares in the kitchens of thinking and progressive housewives. Aluminium embodies all the merits of all the other metals for cooking utensils with none of their defects and dangers.

The indisputable advantages of the use of aluminium generally for cooking utensils and the superior qualities of the "Oakville" Ware in particular are being explained to the housewives in every community in Canada by our liberal consumer advertising now running in the leading national mediums.

Take advantage of the demand that our consumer advertising is creating for

WARE MFG. CO. LTD. OAKVILLE PURE ALUMINIUM WARE

Teakettles

Teakettles are an especially good line to feature just now. The advanced cost of other metals means that for the price of an ordinary nickel-plated kettle you can sell your customer an "Oakville" Aluminium Teakettle which has so many points of superiority that to show one means to sell it.

Muffin Pans

With the Food Controller urging the use of Oatmeal and Cornmeal for cakes and muffins, Muffin Pans will be in demand this season. Oakville Aluminium Muffin Pans require less heat and are less liable to burn.

WRITE TO-DAY

for our price-list and illustrated catalogue showing complete range of Teakettles, Tea and Coffee Pots, Sauce Pans, Pudding Pans, Preserving Kettles, Double Boilers, Bread Pans, Muffin Pans, Roasting Pans, Drip Pans, Pails, Measures, Baking Dishes, etc., etc. Then send for a trial order and commence getting these extra profits right away.

Which Do You Prefer to Sell—

MERCHANDISE OR CUSTOMER SATISFACTION?

THE merchant in the razor business *can* sell the first and forget the latter. He can even sell enough to make a success, provided he works his head off and spends enough money, provided he keeps so busy getting *brand new* business that he cannot afford to forget the loss of customers who have not been satisfied.

But to those merchants who have thought that the sale of safety razors could never be founded on Customer Satisfaction there remains the experience of selling the

PEN SAFETY RAZOR

and learning that here at last is a razor which can be actually *guaranteed* to give Customer Satisfaction.

The Penn Safety Razor and the Penn Honing Strop are conceived and sold on the principle of selling *satisfactory shaves*—not just razors and blades.

They are offered in combination to the public on a *money back plan.* Their makers guarantee the merchant *his full profit* on any sale which for any reason proves unsatisfactory.

Put the Penn Safety Razor and the Penn Honing Strop on display on your counter to-day. Then keep tab on the results.

(SIGNED) A. C. Penn

PENN SAFETY RAZOR

Penn Safety Razor, triple silver plated, with five Penn long-lived blades in handsome waterproof case, $1.50.

Penn Honing Strop, with both abrasive and finishing sides. Only a few strokes needed. Including correct-angle blade handle. $1.50.

We Are Advertising— Are You Selling This Superior Electric Lamp?

Dealers all over Canada are making easy sales of this improved tungsten electric bulb. Big page and half page display advertisements in practically all of Canada's leading trade papers are telling thousands of factory and mill owners, superintendents, merchants, foremen and office people the wonders of the nitrogen gas-filled bulb.

Here is a lamp you can safely recommend. It is lowest in cost, and highest in service. There is a liberal profit on every sale and we are creating the demand through generous, consistent advertising.

LACO NITRO LAMP *"The light that gives more light"*

has many superior merits which appeal to your customers.

When you sell them the LACO NITRO LAMP they receive a better electric bulb at a reasonable price, one that will render long service and save electric current. It is an improved tungsten lamp filled with nitrogen gas and giving forth a brighter, whiter light per watt than any other type lamp.

Tie up to this advertising campaign. Get your share of the liberal profits. Put in a stock of lamps and use your windows and counter to show your trade you can fill their demands.

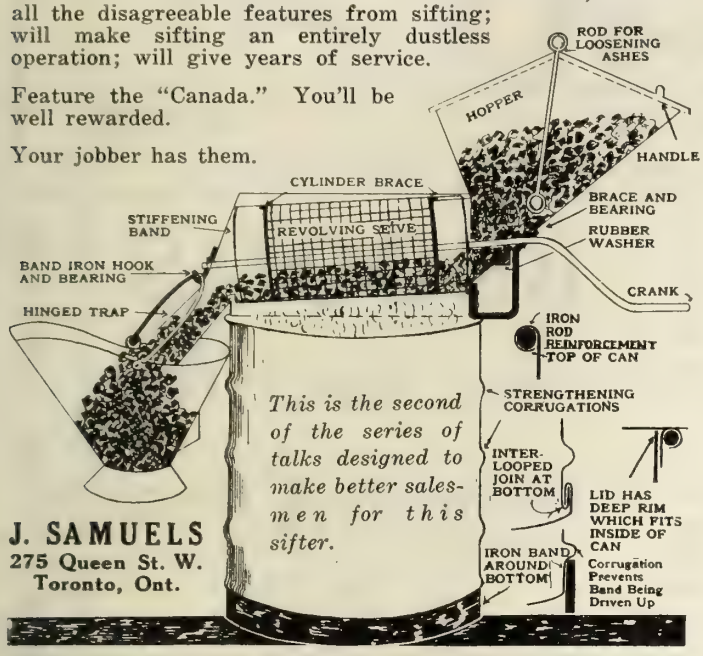
SAMUELS' "CANADA" Dustless ASH SIFTER

Feature it in your advertising

The time is opportune now to advertise and display Samuel's "Canada" Ash Sifter. You can't advertise it too strong for it will back up all your claims. Here are some points to bring out: the "Canada" will save one ton of coal in ten; will take all the disagreeable features from sifting; will make sifting an entirely dustless operation; will give years of service.

Feature the "Canada." You'll be well rewarded.

Your jobber has them.



This is the second of the series of talks designed to make better salesmen for this sifter.

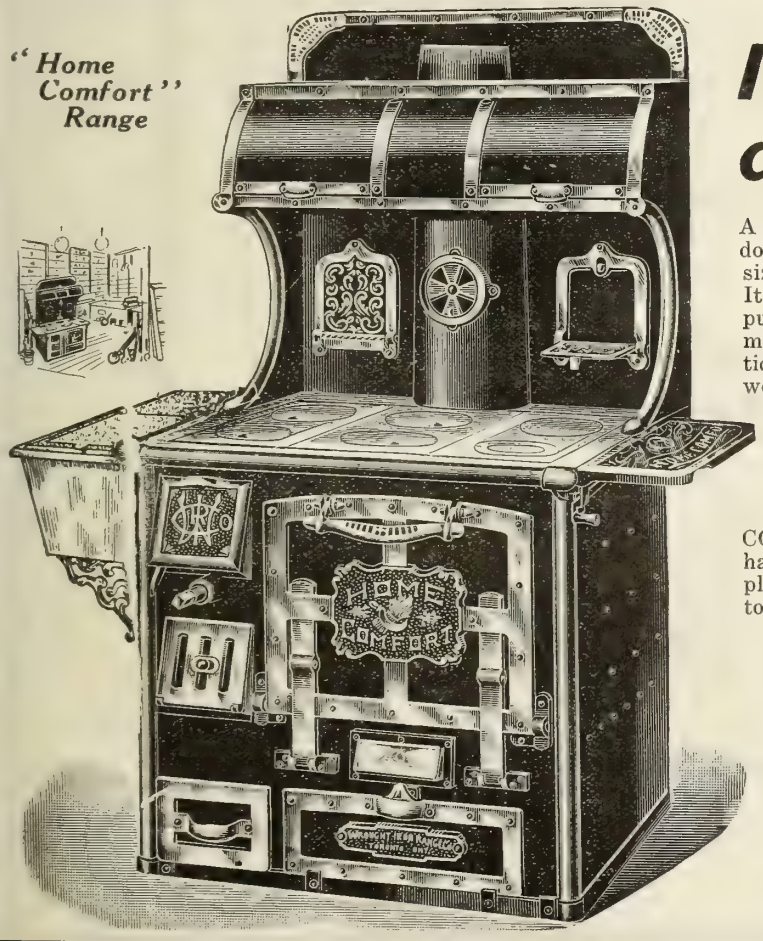
"Home Comfort" Range



It's Wise to Sell a Single Model

A dealer acting as agent for the "HOME COMFORT" doesn't have to keep a big stock. We make only one size and one style. This simplifies matters a whole lot. It used to be, and still is, the custom for the dealer to put forward on his floor the simplest and cheapest model of a range, and to sell his customers this particular range. Then having made the sale, the dealer would proceed to induce the customer to buy extras. For this purpose, the more expensive models kept in the rear would be used for the purpose of demonstration.

Experience has taught a good many dealers that it is wiser to sell but one model, a model like the "HOME COMFORT." It saves time and money—dealers do not have to carry a large stock. This single model plan pleases the customer, too, and makes it safe and easy to make a choice.

We have made the "HOME COMFORT" the most easily sold range on the market. Write for agency proposition. It's a good one.

As To Rubber Quality

"No matter what the rubber article may be, if it carries a Dominion Rubber System Brand, I am always sure that the quality is dependable and that it will give satisfactory service."

Hardware and Plumbers' Supplies were the Rubber articles this large user had in mind and his opinion was based upon many years of experience with Dominion Rubber System products.

His testimony goes to emphasize the attention we give to the qualities of our products. We insist on absolutely reliable quality in workmanship and in material, and we stand back of the products that carry our name and brand.

When in need of rubber for your trade, write to our nearest branch where prompt and intelligent attention will be given to your orders.

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 29 TORONTO, OCTOBER 20, 1917 No. 42

Priority in Automobile Accessories

Hardwaremen to the Front—Standardization Follows in Wake of Auto Accessory Growth—Advertising Playing a Big Part—Window Displays Effective — Sales a Yearly Proposition, Even Cars Laid up For Winter Need Attention—Newspaper Ads. Bring Results—The Casual Observer To-day is the Keen Critical Buyer To-morrow.

PRIORITY in relation to war orders for steel and iron products is being featured in headings and all reading matter which we pick up. Priority in relation to shipments of foodstuffs and coal is an established fact. Priority in advocating the sale of automobile accessories by retail hardwaremen belongs to HARDWARE AND METAL, having been started some years ago, and that our persistent hammering in this respect is bearing fruit is being clearly demonstrated every day.

Hardwaremen to the Front

Hardwaremen generally are quick to act on suggestions bearing real merit and the connection between the hardware store and the automobile accessory business was too obvious to be overlooked. Hardware stores throughout Canada are to-day looked upon as the real leaders in the sale of auto accessories.

Standardization Follows in Wake of Auto Accessory Growth

The growth of the automobile and accessory business has been phenomenal—is even likened to the mushroom in its overnight development—but it is well to bear in mind that this business has acquired a solid foundation and is being carefully standardized. The results of this will be, eventually, that the number of spark plugs sold will be confined to two or three styles—the unusually large range of socket wrenches will be cut down. These are only two lines on which standardization is sure to follow. In the meantime, what action is the hardware man taking to develop this business—has the season so far been a successful one—is the future assuming more definite proportions?

Advertising Playing a Big Part

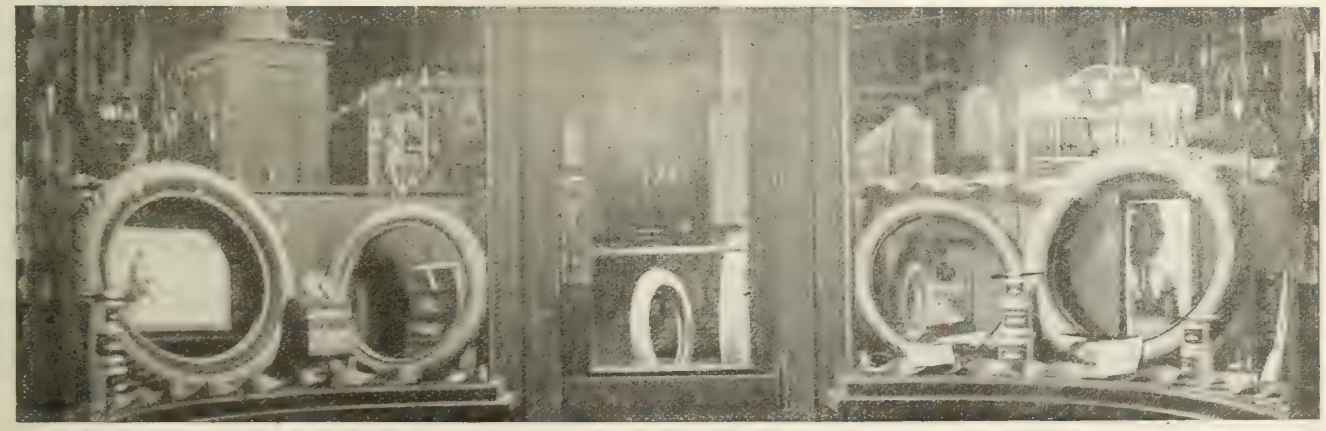
One of the most potent factors in the successful development of any business is the advertising. This applies equally to the auto accessory business and here the hardware merchant has a distinct advantage over the garage owner. The average garage owner is too lax in his business methods to dress up his newspaper ads attractively, if he uses space at all, and how often is it true that a window display is very seldom changed during a whole season?

Window Displays Easily Arranged and Very Effective

Dressing a window to display automobile accessories effectively is by no means a hard task. These goods lend themselves to attractive arrangement as easily or more easily than any other line handled by hardware merchants. There is no necessity of having such a big range of goods as one might think. Many manufacturers supply attractive hangers and display cards which brighten a window materially and a neat arrangement of your goods will bring decidedly good results.

It will be found that such lines as cementless patches, rubber cements, blow-out patches, reliners, pumps, grease guns, wrenches and pliers added to the many other small lines will work up into a mighty neat window. A few tires and jacks help to fill up space in a window, if such a filler is needed.

Reproduced herewith is a very neat



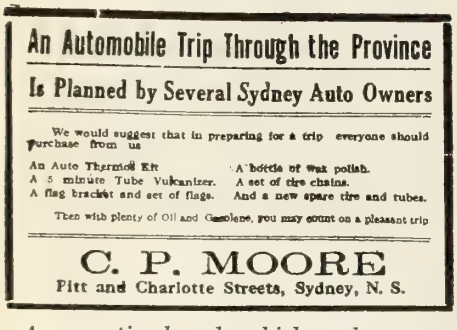
An Auto Accessory Window Display by the James Walker Hardware Company, of Montreal. The line of goods shown is not extensive, but those on display stand out decidedly to catch the eye and get the trade.

window display made by the Jas. Walker Hardware Co. of Montreal. It will be seen that the line of goods shown is not extensive but those which are shown are rather intensified by this special attention in their display.

Specializing on One Line of Goods Possible in Display

There are so many lines which will result in big sales by devoting a window especially to them. A window carrying nothing but tires can be made very effective, as can also a straight display of automobile oils and greases. Think how striking a window devoted to foot warmers and coal and auto robes would be right now. The sale of auto accessories most certainly should not stop now because the cold weather is approaching.

Limousine tops, non-freezing liquid for use in radiators, radiator covers, foot warmers, auto robes, mitts and gauntlets are only a few of the lines for which the auto user will be looking. And the hardware man is the logical one to supply his wants. Business developed throughout the summer must not be allowed to slip away now through overlooking the possibilities of winter auto needs. An attractive window will be a great drawing card. Mention of these cold-weather lines might also be brought out in your newspaper ads now.



A very timely ad. which makes an instant appeal.

Sale Continues All Year—Even Cars Laid Up in Winter Need Attention

It might be well to bring out the point that even those who do not use their cars will have some little "fixing up" they want to do before spring. A new set of spark plugs, anti-rattlers for the doors which have worked loose, a new coat of paint and varnish—there's a probable sale even in the cars which are not being operated and this should be borne in mind.

Newspaper Space Used Extensively and Bringing Results

Retail hardwaremen generally carry space regularly in their local newspapers and this can be used to great advantage in creating a demand for all lines of auto accessories. Some examples of "pulling" ads are reproduced herewith to show how merchants are utilizing their newspaper space for this branch of their business.

Decidedly to the Point—Very Timely

The ad of C. P. Moore of Sydney, N.S., appears to have been an extremely timely one, mentioning as it does "An Automobile Trip Through the Province is Planned by Several Sydney Auto Owners," and then continues in offering suggestions as to lines to take along which would add enjoyment to the trip.

Nearly every town has its local automobile club and by keeping in touch with its movements, the hardware man has an opportunity of offering suggestions through his windows, newspapers and even conversations which will lead to increased sales.

One of the most attractive ads we have seen for Motor Car Accessories. The appeal is instant and strikes the reader forcibly.

Big Space Used Brings Big Returns

The ad of W. H. Thorne & Co., Ltd., St. John., N.B., devoted to "motor car accessories" exclusively is splendid and must have resulted in splendid returns. This ad which appeared near the last of June would have established this firm as headquarters for these goods even had they never advertised them before. Splendid returns have been registered, we understand, and by consistently following up this advertising these people have established a flourishing accessory department. The ad reproduced herewith in its original state occupied a generous space.

This Ad Features Auto Accessories

To what extent the auto accessory line is being featured in hardware merchant's advertising is clearly demonstrated in the ad of the Westman Hardware, Ltd. Note the heading which clearly draws attention to "auto supplies" and then after listing several lines carried mentions some of the older lines of hardware such as washing machines, graniteware, stoves and ranges.

The New Owners—Some Things They Will Need

The motor supply business offers unlimited possibilities to the hardware merchants. During the last two years since the farmer has been getting so much money for his various products, the sale of the automobile has been nothing short of phenomenal to this prosperous citizen. There is no doubt but that another year will add many more to those owning cars and every owner is a prospect for many accessories. If nothing else, a new owner will want a jack, an extra tire, a pump, a grease gun, wrenches, pliers, tire irons, patches, a vulcanizer, etc., and he is usually interested enough to buy many of the other useful things now being offered.

Careful Buying Essential

Hardware merchants should, of course, exercise care in the selection of lines which they will stock. There are now many standard lines of accessories but there are too many novelties which sell this year but won't sell next. These lines should be bought in limited quantities—the standard lines will be O.K. another year should any be carried over. The buying of the line requires careful study but it will not take long to become familiar with the good sellers—a merchant's buying experience in his other lines will stand him in good stead even with auto accessories.

The heading brings out Auto Supplies prominently. This branch of the business is certainly a paying one

In addition to the successful use of

(Continued on page 62.)

Auto Creates Better Community Spirit

Saturday Night for Visiting—Difficulties tobe Overcome — Auto to Help Get-Together Movement—Community Life Improving—Organization Will Effect Wonderful Changes—The Merchant and Farmer, a Combination for Good.

Ready for the road. Buying, selling or visiting, the auto is always on the job.

"EVERYONE is happy, we are all smiling, there's a note of good fellowship throughout the town and county which has never existed before, and we can attribute it almost entirely to the advent of the automobile. Why, just think of it, some of the farmers and their families in our county hadn't seen each other for years—they live in opposite ends of the county, an impossible one-day drive with the horse and buggy; but now—the auto has shortened distances; it has been the means of renewing old acquaintance. They all feel better; they tell us about it, and we feel better; the town and county line is being eliminated more quickly through the farmer-owned auto than by any other agency we have employed. Saturday night is visiting night, the occupants sitting in their cars and visiting until there is only time enough to do their shopping. The crowds, I am sure, would eclipse Yonge Street, in Toronto, and, I believe, even Broadway would feel just a little bit jealous."

That is the summary of an Eastern Ontario hardware merchant's statements to the writer on a recent visit, when the question of the auto and the benefits to be derived from its use were mentioned.

Difficulties to be Overcome

What difficulties have had to be met in recent years when trying to develop an interest in the rural communities? In spite of every endeavor put forth to hold the young people in the towns and country, many disturbing elements have crept in which have produced tremendous difficulties to bar the building-up process, and the question of what can be done to stay the progress of this dry-rot appears to have been long debated without much definite result.

There has been a phenomenal change in regard to business development during the past few months, the result of which is attended with much speculation. The solution of the problem lies within the grasp of those who are the actual sufferers from the process of migration from the country places to the cities, and through the transfer of trade from the local merchants to the city emporiums. The bankers and merchants of the rural communities have it in their power to better conditions and to increase the attractiveness of rural life in order that the young people may be retained, and business maintained.

Auto to Help Get-Together Movement

The spread of automobile ownership to the farming community puts a powerful weapon in the hands of the retail merchants to develop the happy family idea, to create a real get-together spirit between town and country, and to hold the young men and young women in the country. And it is worth while, too, but it needs co-operation and hard work.

The movement looking to co-operation with other interests in the upbuilding and increasing of efficiency on the farm is the great movement of the day. It will not succeed at the expense of the millions of people, and particularly merchants and bankers located in the towns and smaller cities. They are vitally interested and should become a part and parcel of a great joint movement that will increase the productive ability of our farmers. You cannot hope to accomplish this increase by in any way crippling that great body of our people who are the nearest to, and the only ones to whom the farmers as a class go, and upon whom they depend for assistance and co-operation in times of extremity.

It is the problem of to-day, that of feeding this nation, which is already a consuming rather than a producing one. To this cause the merchants and business men of the towns pledge their earnest support. There are more than a million of them. They ask in return reciprocity on the part of our neighbors and farmers, in order that peace, happiness and prosperity may be the portion of all alike.

Community Life Improving

The present conditions of community life undoubtedly show a great improvement upon those of even only two years ago. The farmer is enjoying a period of prosperity which was never his lot in past years, and he will, therefore, be the more inclined to listen to a proposition for the formation of a joint town and country club for the further development of the home town spirit. The farmer is finding out that the merchant and the banker are not such bad fellows after all. This attitude should be taken advantage of and a movement undertaken by bankers and business men to bridge the gulf which has existed between the town people and the farmer. It might be to the advantage of perhaps one person in ten thousand in this country (but not to more) to have this gulf made wider. There are many farmers, some living in the towns, who have been led to believe that the home merchant is a thief and a robber, and that the local banker is no less guilty of sharp practices than the loan shark of our cities.

Thousands of them do not even give the home merchants a chance to supply their wants. Is it any wonder the home merchant does not carry the stock in size and quality to meet the demands of some of our communities? How can he? and why should he?

Those who send their money away

Showing view at the Richmond Hill Tractor Demonstration which drew a splendid crowd. Many came from distances in their autos, which they would never have attempted with a horse.

A close-up view of the autos at the Richmond Hill Tractor Demonstration. The majority of these cars are farm-owned.

when they have the cash, making use of the home merchant only when the crops fail or when the price is so low that they hold for a higher, are not playing fair. In the meantime the merchant becomes the banker, in that he lends his goods without interest and often borrows the money from the bank in order to perform this service. Our farmer friends and our neighbors have almost become estranged from us, and any imaginary line between the country and the town is a barrier to the prosperity and the co-operation and to the good of all.

This is where the auto can be made to play an important part. Think of the Saturday night visiting, mentioned above, in one country town. This must surely offer opportunities for developing home trade, for keeping business at home, and the hardware merchant should take steps to develop the proper spirit in his locality.

Organization Will Effect Wonderful Changes

Organization of the merchants in any town, if only for the exchange of ideas, would be beneficial. If such organization were to put into the development of the community only a small portion of the constructive power which its members use in building up their own businesses, the results attained would be a revelation—the merchants would wonder why they hadn't got together before.

There has existed between merchants generally a feeling of suspicion which has worked to the disadvantage of all. This was brought out clearly in a recent investigation conducted by an expert in the United States, and undoubtedly conditions are similar in Canada.

In dealing with the subject, he pointed out the need of team work and co-operation, first among the bankers and business men, and second by both these classes and by the farming communities. He pointed out that there were too many merchants in country towns who are disloyal to each other through lack of confidence. Proceeding further, he said in part as follows:

"Competition and business rivalry have tended to make enemies of these classes rather than friends and co-workers. The local dry goods man cannot supply the wants of the banker's wife and family because his stock is not fine enough, hence they trade by mail or visit the department store. Let me remind such a one that a town that is good enough to live in should be good enough to spend your money in. If you cannot spend your money where you make it, you are sucking the life blood of your town and you ought to move. The lumberman and the hardware merchant and their families are just as often guilty of the same practice, and they wonder why the town does not improve, and business prosper. What inducement let me ask, for example, is there for the local dry goods store to carry in stock goods fine enough for the bankers', the lumbermen's and the hardware merchants' family? None whatever. This being too often the case, how can the banker expect the merchant, whose note he holds, to meet his obligations if there is taken away from him the only means whereby he may be able to meet them—his profits on goods sold to his neighbors?"

The Merchant and Farmer a Combination for Good

The success, then, of community building would appear to be in getting together merchant and farmer, blotting out the corporate limits, extending the influence of the commercial club and the business organizations to cover the country surrounding.

Some few towns have awakened to the situation and are inviting co-operation. They are also spending money on publicity, and are seeking to do everything possible to promote the feeling of friendship and co-operation with all classes. The wide application of the foregoing to Canada's rural communities would do much to solve the problems of the rural merchants and place them on a footing where they could effectively offset the inroads of strong outside competition, which is a destructive factor in the upbuilding of any community.

Farmers' Visits to Other Towns and Cities Should Result in Better Opinion of His Home Town

The advent of the auto as applied to the farmer will result in his getting out to see other towns and cities in his vicinity, and when he has investigated what is being shown and worn along with the prices charged, he will, in nine cases out of ten, decide that he is getting mighty good value right in his own town. There is no doubt, too, that a large proportion of mail order business has been the result of the farmer or his wife having to face a long buying trip over roads that were none too good when the purchase could be made simply by writing a letter. The development of good roads, then, and the increase in the number of autos, which shorten the miles, should mean the elimination of a big proportion of outside competition.

BICYCLE ACCESSORIES IN AUSTRALIA

Many bicycle accessories are now imported by Australia from the United States, as well as from the United Kingdom. The statistics of the various articles are not kept separately, but are grouped under the heading "Cycle parts," and include bells, saddles, steel trouser clips, toe clips, bands, parcel carriers, repair outfits, etc. Bicycle sundries are sold there by dealers in motor accessories and hardware.

Imports of cycle parts, plated, brazed, enameled, or permanently joined (including rims); cycle accessories and parts, including steel trouser clips, steel toe clips, and bands, bells, saddles and saddle covers, parcel carriers, inflater clips and connections, and repair outfits, into Australia, during the year ending June 30, 1916, were:

From	United Kingdom	$214,054
„	Canada	6,356
„	Japan	10,040
„	United States	41,342
„	France	2,798

Imports of various other cycle parts, including steel bars for making rims, ball heads not permanently joined and parts thereof, plated or unplated; bottom brackets, including bracket shells, and plated or unplated axles, cups, cranks, cotter and locking pins, lubricators and chain wheel; hubs, including sprocket wheels, lock rings, and free wheel clutches; lugs, fork ends, bridges, nipples, spokes, spoke washers, chains, pedals, and parts thereof; valves for pneumatic tires, cyclometers, speedometers, and inflaters into Australia, during the year ending June 30, 1916, were:

From	United Kingdom	$352,164
„	Canada	40,319
„	United States	263,818
„	Japan	18,128

BRITISH TRADE RESTRICTIONS

The United States Consul General reports from London that the sale or purchase of teak logs, planks, and decking and lignum-vitæ is forbidden from October 5, except under license.

Selling Fall Sporting Goods

Sporting Goods Salesman Has Many Hard Customers to Deal With—Overly Critical Type Should Receive Patient Treatment and Argument Avoided—Fall Sale of Shotguns.

THE sporting goods season is about to come to the fore again, with the usual array of merchandise peculiar to the fall and winter periods. Shooting time is here and with the winter fast approaching many other lines will be making their appearance in displays.

Big possibilities are contained for the hardware dealer in selling sporting goods lines, and close attention to the department combined with a little extra salesmanship at this season will do much to increase the turn-over. Many types of customers have to be dealt with, and perhaps in no line are the purchasers' peculiarities so much in evidence.

Sometimes the patience of the sporting goods salesman is apt to become exhausted at the overly critical customer whose "over-criticalness" or innate desire to exhibit his ignorance about every article in the interior of the sporting goods department comes to the surface when least wanted. You not infrequently can scent him in advance, for his voice is heard in all corners and in all enterprises. But at times he advances on the scene just as you are about to sell the article he is bent on criticising, for he is unsparing of time or place, and usually it requires much tact, a plentitude of formidable patience, and, more than all else, an expert's intimacy with an article to break down his plausible arguments. Every kind of business has to stand for him because he seems to be of a kind that is always extant.

Difficulties in Selling Shot-guns

It is within close domain of my memory, says one dealer, one of those knockers trying to make a victim of a salesman while he was in the act of selling an automatic shot-gun. Of course, he had used every gun manufactured and they had all failed in the particular work for which the prospective buyer intended using it. When, and not until, he had rid himself of his supply of accumulated choler against everything he knew nothing about, the amiable harangue ended. The complainer was silenced satisfactorily. The prospective buyer purchased because more questions and objections had been answered during the conversation than he had thought of. So completely was every objection quashed that all his dubitancy about buying was no more.

For the salesman's part, it was an act almost of vocational, commercial preparedness—part of his cultivated personality injected into an every-day contingency.

Another grumbler had it in strong for the automatic and repeating shot-guns. No one ever heard him voice his objections out in the game fields or the duck blind. It was, apparently, his prime motive in life to appear at the sporting goods department just when a salesman was occupied in selling one of those "objectionable?" guns. He had the way of the rest of his life, of detaching himself from what he was scrutinizing—never observing—and appearing at the most inauspicious moment of the trade.

"They ought to legislate against the pump and automatics," he began, as the salesman had already anticipated from his first vision of him.

The salesman suspends his conversation and, if he knows the knocker personally, introduces him to the man wanting to buy one of his despised guns. He says nothing—at least not right then.

"As for getting rid of game, they ain't anything their equal" the knocker proceeds to announce in a louder tone, thinking it adds importance to himself, and strength to his assertion.

"I was once impressed the same way" almost agreed the sporting goods salesman "before I got one and used it in the field." He was no more on the defensive, instead anticipating the can't talk against magazine shot-guns. "Like yourself, I am a strict believer, and what's more important a strict observer of game laws, and I stick to the law of limits. Now, what's the difference if I take my pump or automatic and kill my ten or fifteen birds in a short while or a long while? That's up to me—the limit controls my number, and with the active warden system of the present it would be useless for me to dodge it."

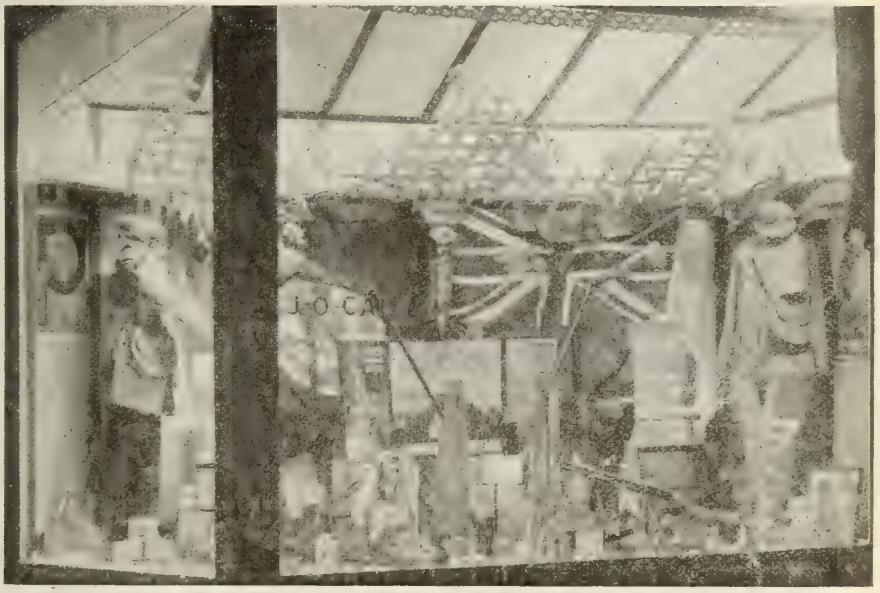
"But it is the wrong principle—they are against all the ethics of sportsmanship" interposes the kicker or knocker. "You are tempted to get too many out of range with so many shots at hand, and the result is cripples, and cripples."

"My experience has been just the opposite" the gun salesman comes back at him, with no loss of equanimity "seldom is the temptation strong enough for such as you assert, and were it so I could easily chasten myself into the use of solely two shells as I frequently do. I did for a while just keep two shells in the guns for ducks, but I found that I saved much game for myself that would otherwise get away to die unstopped by two shots. First that notably tough drake is hit. He climbs a little higher at the initial impinging of the shot. The second shot checks him some more only, though he yields a quantity of belly feathers. But the third shot makes him hit the water with a huge splash. Now, if I hadn't had that third shot in reserve, with the belly feathers proof of his being mortally wounded, he would have pulled away to die several hundred yards out in the rushes, useless to anybody. Isn't that so? As for game conservers the logic is their way, as far as concerns ducks."

In all this discussion it was observable, without once entering into argument, that led to nil, how, beforehand, the salesman silenced his opponent's batteries. You can bet the last red, the buyer had no hesitation about buying the modern shot-gun.

Every day some gentleman of the kind has to be handled in connection with the sale of sporting goods. The art or science of diplomacy must be resorted to, but the guiding movement of the occa-

(Continued on page 62.)



An effective Fall shooting display in the window of J. O. Cadham, hardware dealer of Portage La Prairie, Man. The arrangement is by H. Osland. Much of its drawing power lies in its completeness and natural appeal, and a touch of the "real thing" is lent by the presence of imitation ducks and birds suspended by wires.

The Brandram-Henderson Convention

Paint Company's Salesmen and Managers Foregather at Montreal—Window Dressing Competition—W. C. Jackson Won Efficiency Prize.

THE Annual Convention of the salesmen and division managers of Brandram-Henderson Company, Montreal, was held last week, concluding on Saturday. Salesmen were present from all parts of the Dominion, accommodation for the out-of-town delegates being provided at the Windsor Hotel which also served as the headquarters for the convention. A special dining-room was set apart during the four days of the convention for the delegates.

The opening meeting of the convention was held at the company's head office where an address of welcome was delivered by the President, Mr. George Henderson, who also presided at all the general sessions. An opportunity was given to all the delegates to go through the plant and watch the various interesting processes of lead corroding and paint making.

A unique feature of the convention was the setting apart of one hour for each division. During these periods the chair was taken by the divisional managers, who conducted discussions pertaining to the special problems in their own divisions.

The window dressing competition was keenly contested, each division entering a team, and windows were reserved by dealer agents in different sections of the city. An entire morning was allowed for dressing the windows. The prize was awarded to the Central Division team consisting of E. W. Charlton, chairman, and Messrs M. Wineroope, C. H. Gratton and W. M. Parry. The window used by the prize winning team was that of Philbin & Co., 4169 St. Catharine St., Westmount.

On Friday morning the delegates were taken around the city on a motor trip visiting the principal points of interest and stopping to examine the competing windows en route.

Great interest was displayed in the announcement of prize winners in the various sales competitions. All prizes were in gold, except the Efficiency Prize, which was a very handsome black seal travelling bag. The prize winners were:—

Efficiency Prize, W. C. Jackson, Ontario Division.

Regular Competitions, George E. Smith, Maritime Division, J. B. Cleveland, Western Division; S. Winterbottom, Western Division; W. A. Church, Maritime Division; O. E. Stewart, Western Division; M. Wineroope, Central Division; R. B. H. Cotton, Ontario Division; E. W. Charlton, Central Division; A. M. Towe, Ontario Division; W. M. Parry, Central Division.

The social features of the convention were well looked after, with Thursday's theatre party and Friday's smoking concert outstanding. A block of seats was reserved for Thursday night at the Orpheum Theatre, where the stage decorations left no doubt as to the presence of Brandram-Henderson conventionites. Special moving pictures were shown of the president, secretary and divisional managers, each in a characteristic pose, as well as a series of films showing tennis matches in progress on the company's lawn tennis courts. The close up of Harry Lemoine, winner of the singles competition, was one of the movie hits. The convention movies, which concluded with a picture of the sales force under the caption of "A Happy Punch," were well received by the entire audience, who were impressed with the progressive spirit shown.

The smoking concert on Friday night was participated in by some of the best talent in Montreal, and it made a very suitable finale to a convention that seemed to possess just the right proportion of instruction and entertainment.

A group picture of the sales force of Brandram-Henderson's, photographed at the recent annual convention of the salesmen and division managers of the company, held at Montreal.

What Hardwaremen are Doing

Notes on Advertising Appearing Throughout Canada — Economy is Outstanding Feature of Seasonable Stove Advertising—"Special" Combinations Attract Attention.

"FUEL Economy Essential" is the timely heading under which a stove and furnace advertisement was recently used by J. W. RORK HARDWARE, NORWOOD, ONT. Continuing, it says in part "Those contemplating having a furnace put in this season would do well to see us early. Let us make an estimate on the cost of having a furnace installed in your home and quote you prices. Fuel economy this year demands that you exercise the utmost precaution in selecting the best methods to heat your home during the coming winter. We can also supply you with coal oil heaters from $4.75 up. These will save you coal and wood to a wonderful extent in the fall and spring."

Stove and furnace advertising is much in evidence at the present time and something "special" is required to attract attention to the ads.

* * *

"Penny wise and pound foolish," says an advertisement by McCUBBIN HARDWARE, OAK LAKE, MAN., which continues as follows: "This old saying applies to the woman who will cling to her old stove after it has worn out in these days of high prices of coal. A good modern range will save its first cost in the amount of fuel consumed and give the user comfort in her task of economy."

* * *

A distinctively cold weather advertisement was recently published by HODSON HARDWARE COMPANY, MAPLE CREEK, SASK. Under the heading "Are You ready for the Cold Weather?" it says "Get your home in shape now for the approach of cold weather. We can supply you with everything you need to make your home comfortable. Cook stoves, ranges and heaters, coal hods, shovels, pipes, base boards etc."

* * *

A distinctive advertisement of a general nature recently published by PORTEOUS BROS. HARDWARE, CARLYLE, SASK., is as follows: "The stock is complete. We have always aimed to have more on hand than we expect to sell in the season. We have successfully buried that old fiction: 'We expect the goods along in a few days.' They're here. Time's money now. When you need hardware, call. Are your stovepipes in good shape or are you going to take chances? Examine them carefully."

* * *

ROLAND HARDWARE COMPANY, ROLAND, MAN., featured builder's hardware and other lines in recent advertising. One advertisement says in part as follows: "Getting money to build will be easier from now on than getting material. We have a large stock of "everything for building" in the hardware line, including tarred paper, building paper, roofing, hinges, door hangers and track, paints and varnishes. Compare our prices with others and we know we will get the business. Some specials were advertised as follows: Cold blast lanterns 90c each; lantern globes (short) per doz. 95c; cow chains, six styles ranging up from 20c; barn forks $1.60 each; straw forks $1.20 each; barley forks, long handle $1.65; 27 piece set of enamelware $5.00; Matchlite gasoline lamps $8.50 each.

* * *

With a reminder of "Colder Weather" in the shape of bold letters at the head of an advertisement, J. GARDINER, HARDWARE, DUNDALK, ONT., advertised stoves "for every need." Threshers' supplies and dry cell batteries at 35c each were also mentioned.

* * *

"One Hundred Day Guarantee" is the catchy heading of a stove advertisement used by DUNDAS BROS., COBOURG, ONT., which continues in part as follows: "If your stove for any reason fails to give satisfaction we agree to refund the price paid us on this stove any time within 100 days of the date of purchase." Get our prices when you begin to think "furnace."

* * *

An advertisement for washing machines recently appearing by A. L. SHIELDS, HARDWARE, KINCARDINE, ONT., says in part as follows: "At this season of the year when there are so many duties for the housekeeper, reason demands that she have every convenience. Nothing lessens housework so much as our ———— washing machine. The clothes are cleaned by the means of three large smooth vacuum cups. The filmiest garments can be washed without damage, no twisting or pulling as with the ordinary washer. It can be operated by hand or foot power, or both, and is as easily operated seated as standing. The mechanism is simple and trouble-proof."

* * *

An advertisement for electric washing machines was recently run by ASHDOWN'S HARDWARE, WINNIPEG, MAN. "Do it Electrically" is the heading of the advertisement which continues as follows: "Before next washday let us demonstrate to you the washing machine that takes the labor and drudgery out of washday. The ———— can be operated from an ordinary lamp socket, just a snap of the switch starts the motor which operates the machine and also the wringer. The ———— washes cleanly and thoroughly, doing the washing in about one-half the time required with old fashioned ways."

* * *

"The Watchword of To-day is 'Economy'" says a stove advertisement recently used by BREWER & HARRISON, PARKHILL, ONT., which continues; "The great wartime necessity finds all of us striving to make every dollar count. Two sure ways you must follow: 1st. Food consumption, 2nd. Fuel consumption. Now in fuel consumption we have a first class line of cook stoves and heaters that we feel sure will save coal and labor. Heat all day and night. Thoroughly substantial and made in different sizes to suit. Prices according to quality."

* * *

Under the heading "New Fall Goods" H. LENDON, HARDWARE, LEAMINGTON, ONT., recently used an advertisement of stoves and heaters. The idea of economy is again brought out in the wording of the advertisement as follows: A line of oil heaters for use during these cool evenings before winter. Heaters are fitted up, economical in cost and guaranteed not to give disagreeable odor when in use.

* * *

A stove advertisement containing some detailed information of interest to intending purchasers was recently used by J. R. MYERS & SONS LTD., HARDWARE, STRATFORD, ONT.

"You suppose that cast iron is something like hash—about as good as you want to make it—and you're right" says the advertisement, continuing: "To say a range is made of cast iron is the same as to say that a table is made of wood. You want to know what kind of wood—birch, elm, oak, or mahogany. Now, there is as much difference among cast irons as there is between mahogany and oak. And to look at the iron you can't tell the difference. But when you put a fire into a range and keep it there for months at a stretch, the difference shows up. The fire-box may burn away and call on you to pay a bill for a new one. The top of the range may twist out of shape. The joints may spread and let dust into the oven or let heat out. All this may happen with one range made of cast iron, while another cast iron range may show no signs whatever of wear. The difference is in the quality of the iron. It is worth something, then, to get a ———— range, because you know that the kind of cast-iron it is made of resists the wearing effects of heat and long use."

EDITORIAL COMMENT

UNION GOVERNMENT

SIR Robert Borden has succeeded in getting together a new Government that contains elements of the best strength of both parties and which can be depended upon to give a more vigorous war-time administration than any cabinet that could have been selected from either party exclusively.

The new Government is, however, a Union Government rather than a National Government, the new members being politicians rather than big business men. Nevertheless it gives promise of better things. The formation of a war cabinet to conduct matters pertaining strictly to the war is now being looked forward to with interest and it is to be hoped that the strongest men in Canada will be called upon to serve in this capacity. Sir Robert could go further with his reorganization and gradually draft into the service of the country the strongest men and brightest minds in Canada. It may not be possible to find cabinet places for them all but we might well follow the Washington plan and find administrative positions for them outside. The work of organization for war has been divided up by the Wilson Government and commissions control a great deal of it, commissions composed of the strongest business men and financiers obtainable.

AUTO BETTERS COMMUNITY LIFE

LATEST figures available indicate that the farmer is the one who is buying the automobile to-day. The prosperity of the farmer is going to be a splendid thing for the community at large. Just what does it mean?

It means better roads. It means better community life, it will help the "Back to the Land" movement as perhaps no other agency would. It has not been the work on the farm which has influenced the movement of the young people towards the cities—it has been the lack of entertainment, the feeling that they were stranded where there was no outlook but work, work, work, from morning to night.

Now the auto has changed all this. After the day's work, a few minutes' ride in the car brings them to town and a picture show, or they can enjoy a trip through the country visiting their neighbors.

The auto will prove of great educational value in many ways to the farmer. He will be enabled to go distances of 20 or 40 miles to see special tractor demonstrations or special stock exhibits — trips he wouldn't undertake with a horse and buggy and perhaps couldn't arrange for by train. There is no doubt that travel broadens the outlook and the farmer may not think so badly of his home town when he sees some of the others.

This is where an organization of the retail merchants in each town could do a great deal of good for themselves and the surrounding country. Make your town attractive, welcome the farmers, eliminate the corporation limits, and make it a pleasure for the people in the surrounding country to come to your town to do business. It means dollars and cents to you apart from the real joy that you will derive in doing something for somebody else.

BIG INCREASE IN AUTOMOBILES

THAT the total number of automobiles owned in Canada will reach the 200,000 mark before the end of the year seems quite possible from figures now available from the various provincial offices for the first nine months of the year.

The increase to the first of October over last year's total was approximately 60,000 cars and there are three months yet to come. Owned in Canada now, there are approximately 178,000 and when last year's total of nearly 118,000 is given the strides made are easily determined.

Throughout the country the farmers are beginning to get returns for their year's work and there is no doubt but that the number of cars sold between now and the end of the year will bring the total very close to the 200,000 mark.

The increase during the year so far has attained its greatest impetus throughout the Prairie Provinces, where a seventy-five per cent. advance is already noted.

Figures for the different provinces indicate just where the increase has been greatest and furnish interesting reading. Ontario leads the list with a present total approximating 70,500 cars, as against somewhat over 54,000 last December. Second place has been taken by Saskatchewan away from Quebec, the prairie province total now reaching 32,000 as compared with only 14,000 last year. Quebec's total last year was about 15,500 which has been increased to nearly 19,900 so far this year. Fourth place is held by Alberta, which province has practically

doubled its 9,000 total of last year. Manitoba is not far behind Alberta with over 16,500 cars. British Columbia comes next with 12,116 cars and from there to the extreme East again in Nova Scotia where 5,100 cars are going the rounds. New Brunswick is not far behind Nova Scotia while Prince Edward Island is still to reach the mark of 99.

These figures appear almost sensational but, before this country will parallel the United States in number of cars owned, figured on a ratio basis of population, there must be about another 120,000 in use. Canada's total must reach pretty close to the 300,000 mark and another fifty per cent. increase during the next twelve months will practically bring about this result.

THE WAR AND MAN POWER

DISCUSSING the effect on labor which the enforcement of the Military Service Act will have, *The Financial Post* says, editorially:

There can be no doubt but that the enforcement of conscription—the taking of at least another hundred thousand of Canada's ablest men—is a menace to the country's productive capacity. But there is no general murmur on that score. If the application of the measure is made fair and equitable and the exemption boards display a real knowledge of the country, there will be no complaint.

But there are other points in the labor situation which are worthy of cool thought. The taking of another hundred thousand men will aggravate a labor problem already very acute. Seeds of unrest are being sown with the working classes by a near-socialistic press. With the club which will be supplied by the taking of the first draft, labor will be in a position to make even stronger demands.

We note in the conscription announcements that no man will be allowed to take a lower wage to secure exemption, or no employer permitted to reduce wages because of influence used in behalf of a draftee. Such provisions are wise, even though they would only apply to very exceptional cases. We believe that under the circumstances and considering the high cost of living that employers should not only maintain wages, but increase them if possible. But there is more liable to be a crisis in the other direction. With the demand for labor continuing, the reduced ranks are likely to take advantage of their position to enforce higher wage standards than conditions warrant. There are problems in the making here for an energetic and capable Minister of Labor.

STEEL PRICES SATISFACTORY

CHAIRMAN E. H. GARY, of the United States Steel Corporation, in discussing the fixing of steel prices indicated that whereas profits of some manufacturers would be reduced, conditions in the trade would be improved. Chairman Gary spoke as a member of the American Iron and Steel Institute Committee which conferred with the War Industries Board over prices. In reply to an inquiry about the effect of the new prices, he said:

"Our committee was in conference with the War Industries Board on Wednesday and Thursday of last week and agreed upon recommendations to the President concerning the prices to be fixed for many of the leading semi-finished and finished steel products, and these were adopted by the President as published. On the whole, it may be said, the negotiations with the War Industries Board and the results were satisfactory to the steel producers, although the prices named are lower than had been expected.

"The disposition of the members of the board carefully to inquire into the facts relating to costs, capacity, facilities and profits has been so fair and frank that the manufacturers, without exception, will be influenced to respond to the requests of the board for production equal to full capacity. And the prices determined upon will, with some adjustments between manufacturers as to deliveries, yield profits sufficient to bring them within the President's original proclamation.

"The prices of commodities not already considered by the board will be fixed by arriving at a parity. The steel industry generally will be benefited by the attitude and action of the War Industries Board and the President. The profits of some of the manufacturers will be somewhat decreased. However, conditions will be more normal and they will be healthy."

THE BRITISH RED CROSS

THREE days of this week, starting Tuesday, have been devoted to collecting $500,000 for the British Red Cross in Toronto. The appeal, which comes from overseas, is a strong one, and those who stay at home should certainly make a strong effort to see that there is no lack of funds to carry on this magnificent work.

The appeal is Dominion-wide and it is hoped that when all returns are in, the totals will be surprisingly good. At time of going to press, the results of Toronto's campaign are not definitely known, but there is every reason to believe that the amount asked for will be subscribed with a margin over.

The strongest support has been given to the movement everywhere, and it is a worthy cause to which everyone should subscribe until it hurts. The appeal has been Give, Give, Give; we hope it will be answered sufficiently.

THE keen hardware buyer makes a close study of the advertising pages in his trade paper. The selling staff also secure many excellent sales suggestions from the ad pages.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

"FOULESS" SPARK PLUG

An entirely new principle of sparking is claimed to be introduced in the D. & D. Fouless plug, manufactured by the D. & D. Company, 20 E. Jackson Blvd., Chicago, Ill. Instead of one or more small

"Fouless" Spark Plug.

separate wire terminals, the end of the Fouless spark plug is formed in the shape of a slotted chamber or cage. In this cage is a movable ball. Vibration keeps the ball in continual movement. It is claimed that this design gives greater efficiency with a leaner mixture, and that it keeps the plug clean on the same principle that shot is used to clean a bottle. The inner wall of the cage is designed so that the ball is always the same distance from the electrode. The Fouless is claimed to be more economical than a cheaper plug, not alone because it fires a leaner mixture, but because of its in-built ability to act as an energizer. A double spark is given. The first jumps from the electrode to the ball, and the second jumps from the ball to the terminal. The second spark is claimed to be greatly intensified, producing a fat, rich spark that fires the leanest mixture possible for any plug. It is further claimed that the Fouless plug is economical, because the difference in price is quickly made up by increase in power and saving in fuel.

STEEL HEEL PLATES

The Root-Heath Mfg. Co., Plymouth, Ohio, are marketing "R. & H." steel heel plates, which are claimed to be unbreakable and to be the most durable plates on the market. They are made of specially prepared steel, and are put up in ¼, ½ and 1 gross plates in carton. Malleable heel plates are almost, if not impossible, to obtain, and, therefore, the plates are being made of stamped steel. A guarantee is given that the points or prongs will not break off. They are claimed to be neat in appearance and to wear well.

OUTLOOK WINDSHIELD CLEANER

The Outlook Company, Cleveland, Ohio, are marketing a windshield cleaner, known as the Outlook, that is claimed to entirely eliminate the danger of driving in rain or snow. The cleaner combines a scientific rubber squeegee strip with a rubber roller. The cleaner is operated by the touch of the finger, and as the squeegee strip moves over the glass it is claimed to wipe it clean at every point. The roller is adjustable to any car and holds the strip close and even to the glass at every point. The roller is also said to keep the cleaner up out of the way when not in use. It is claimed the Outlook can

Outlook Windshield Cleaner

be attached in a few minutes; is strong, durable, good-looking and needs no attention. It is designed to fit any car—gas, steam or electric—and in closed cars the Outlook Special is fitted through the glass. With an Outlook it is claimed the road can always be seen without changing the position of the driver at the wheel. Driving strain is, therefore, eliminated, and riding is done in safety.

MACBETH AUTO LENS

Macbeth-Evans Glass Company, Pittsburg, Pa., are placing on the market the Macbeth lens, which is claimed to give long range and ample side lighting. It is also claimed that the lens provided with the green visor, designed primarily to redirect all upward rays downward, gives the car on which it is used a distinctive appearance. The lenses are made in all sizes to fit standard lamps and sell

Macbeth Headlight Lens.

for $6 per pair in Canada, with a special for Fords at $4.80 per pair. The Macbeth lenses are advertised under the heading, "A Lighthouse Lens for Your Car," because, it is claimed, they give the same measure of safety to those who motor overland as the Macbeth lighthouse lenses are giving to travellers upon the ocean and inland waters. The front surface of the lens is divided into five horizontal prisms, each of which is inclined at a certain angle. As a result, it is claimed, the light is directed down below the horizontal, lighting the path of the car at the greatest possible distance without having the glare of the lamps blind the driver in an approaching automobile. The concave recesses in the back of the lens are claimed to spread the light laterally, thus providing the side lighting necessary for country driving and for turning corners.

NEW ROOF CEMENT

A prepared cement, ready for use, and which can be applied with a trowel to cracked joints, defective spots in roofs of slate, metal, or gravel and asphalt is on the market under the name of Reed's Patent Roof Cement, or in fuller title, Reed's patent Plastic Asphalt Roof Cement. The makers, Geo. W. Reed & Co., Montreal, claim for it that it will repair a roof where solder cannot be used, that it is very adhesive, sticks

(Continued on page 62.)

Winter Auto Accessory Time is Here

Lines to Make Driving Comfortable in Winter Time Are Numerous and Afford Opportunity for Increased Business—Gauntlets, Foot Warmers, Wool Caps, Engine and Carburetor Heaters, Engine Hood Covers, Anti-Freeze and Chains Indicate Range.

WINTER is fast becoming a time when automobiles are generally used. With the fostering of this feature of automobile driving there is presented an increased field for automobile accessories. Comfort in driving becomes the one big essential. Also it is necessary to protect the car against the possibility of hard wear during that period. Lines which readily suggest themselves as holding excellent possibilities for the development of trade include lap robes, gauntlets, wool caps, foot warmers, engine and carburetor heaters, engine hood covers, anti-freeze mixture, and chains for wheels. These are all lines which carry a good profit, and the hardwareman could perhaps make a bigger gain by concentrating on some of these lines than through the handling of some of the usual lines of the hardware stock. The sale price for some of these articles is fairly high, and when 25 or 30 per cent. is the usual profit for dealers, it can be seen that the field is a promising one for the increase of trade. The class of people who drive automobiles consists usually of those who do not scruple about spending a few extra dollars in order to have the use of their car during the winter time. Driving an auto in winter time may be very unpleasant if the proper adjuncts are not provided. But it can be made as comfortable as travelling in a Pullman if the owner is willing to be shown. It is the province of the dealer in automobile accessories to foster this trade through window displays and interior store displays. They are lines which add greatly to the richness of the store interior and give it an atmosphere of warmth. What more inviting article could be displayed than a good warm lap robe? Caps and gauntlets also remind the autoist that he can make himself comfortable in spite of the roughest winter weather.

Lap Robes Now Made in Canada

Prior to the war the majority of lap robes came into Canada from Scotland. With war conditions and the disturbance caused to industry in the Old Land owing to the lack of help and the use of plants for the manufacture of war materials, together with the difficulties of transportation, this trade with Scotland has practically ceased. Canadian manufacturers have in consequence had the field entirely to themselves. Some difficulty is experienced by wholesalers in getting stocks of robes owing to the scarcity of wool supplies. There are, however, several Canadian makers who are filling the need and are turning out a good article. Prices are naturally higher than they were in pre-war times. But this is a condition prevalent in almost every line, and people have come to look upon it as the accepted thing. Prices have increased 25 per cent. over last year. These robes are made in quite a variety of styles and coloring, including green and brown rugs, rubber interlined rugs, and imitation buffalo robes as some of the leaders.

Curtains invariably go with the automobile when it is sold, in order that it may be completely enclosed when rain or storm overtakes the autoist. These curtains will be requisitioned more generally during the winter time, and will be almost a permanent fixture on the car. An enclosed car keeps out much of the winter's cold, but some method of warming is usually found necessary to keep the interior comfortable. One of the less expensive types of heater is that graced with the name of foot-warmer. These little contrivances provide a warm footrest, and when placed underneath the lap robe radiate considerable heat, which warms the body. These little foot-warmers burn fuel carbon, which can be replenished at a cost of 10c per brick. The foot-warmers in themselves cost in the neighborhood of $3 to the consumer, with a discount of 25 to 30 per cent. to the retail trade, according to the number taken.

Exhaust Utilized for Heating

The type of car heater which has been found to give quite general satisfaction is that which is placed in the car like a foot-rail, and on which the feet can be placed. The device is comparatively simple, and consists of a flexible pipe which clamps over the exhaust pipe and connects with the heater in the car. The rail in the car is perforated to allow the heat to come through. It is necessary to bore one hole in the floor of the car to allow the tube to come through. It is very easy to instal, and can be attached in an hour's time. There is a stopcock for regulating the heat. It can be turned off completely, or the amount of heat can be regulated according to the needs of the weather. When the car is going fast a greater heat is developed. This heating device is sold to the consumer at $10 for the small car size and $15 for the large car size. Prices to the retailer carry 25 and 30 per cent. discount from these figures, according to the number ordered.

Anti-freeze mixture is a necessary safeguard against freezing radiators in winter time. These mixtures in most cases are guaranteed to keep a radiator from freezing at a temperature of 20 degrees below zero. A necessary adjunct in connection with the anti-freeze mixture is a freezometer which sells to the consumer at $1, and is used for indicating the strength of the anti-freeze mixture, thereby showing the point at which the mixture can be expected to freeze. With continued use, some of the constituents of the anti-freeze evaporate, and it is necessary to add certain ingredients to keep the material up to required strength. Anti-freeze mixture sells in the neighborhood of $1.50 per gallon, and from three to four and one-half gallons is required, according to the type of car.

With the coming of cold weather, radiators are liable to spring a leak through the contraction caused by the cold. Also the rough roads of fall are liable to start a drip. Radiator cement is put up in tins, and is designed to stop a dripping leak. The consumers' price on this article is not great, being 65c per tin, but it is an article that at times is very necessary.

The engine hoods have almost come to be a necessity, whether or not very much driving is done. If a car is left standing for a few minutes on a very cold day without proper protection, trouble that may mean much loss of time and expense may develop. For the smaller cars, such as the Ford and Chevrolet, there are two types of hood, one a two-piece article for 1911-1916 models, which sells to the consumer at $3.40 each. Two-piece designs for 1917-18 model cars sell at $5.50, and are heavy felt-lined. For the larger cars the design is of heavy quilted material, black waterproof covering and asbestos lined. The price of this latter design is $14 to the consumer. Retailers are allowed a discount of 25 to 30 per cent. off these prices.

To safeguard against freezing when the car is left standing in the garage there is provided the engine and carburetor heaters. These are of two designs usually, one being a flat little coil and the other a radiating heater. Either of these types can be used for attaching to an ordinary light socket to place under the hood against either the carburetor or radiator to be left there during the night.

Other Winter Accessories

Chains are a very necessary line for winter car running to prevent slipping and skidding in the snow or on wet roads. There are two types of these chains. The 30 x 3½ tire sells at $4.50 and $3.30 per pair. For the heavier tires, 34 x 4, the prices are $5.50 and $4.30 per pair. These prices are subject to the usual discount of 25 to 30 per cent. to the retail trade. Wool-lined gauntlets and wool caps are also essentials to comfort in the winter weather. Wool-lined gauntlets of one-finger type sell to the consumer at $5 per pair and wool caps at $1.50 each. The lines above indicated are sufficient in number to allow the dealer in auto accessories to see the possibilities of this trade. It will mean money in his exchequer if he takes advantage of the opportunity. Window displays and displays in the interior of the store, together with price ticket attached, are effective means of advertising.

EVENTS IN THE TRADE

BUSINESS CHANGES

Buchanan, Sask.—Plaxin & Verigin, hardware, have been succeeded by Plaxin Bros.

Manville, Alta.—S. Johnston, hardware, has been succeeded by A. E. Williams.

Toronto, Ont.—J. Greenwood, hardware dealer, has been succeeded by J. M. Boyd.

Delburne, Alta.—A. E. Ferrell, hardware, etc., has sold hardware business to R. B. Wilkinson.

Toronto, Ont.—Boyd & Leslie, hardware dealers, have dissolved partnership. W. G. Leslie continues.

Spring Valley, Sask.—F. J. Theobald, implements and autos, has been succeeded by Spring Valley Hardware Co.

Winnipeg. — Manitoba Frost Wire Fence Co., Ltd., wholesale and retail dealers in wire fences, have discontinued.

Quebec.—Grenier & Chalifour, painters, have dissolved.

Montreal, Que.—N. Langelier, hardware dealer, has sold assets.

TRADE NOTES

Montreal.—N. Langelier, hardware, has sold stock.

Benito, Man.—C. W. Staples, furnace and hardware dealer, has sold stock.

Grand Mere, Que.—O. Nobert, hardware, is advertising business for sale.

Winnipeg. Man.—Winnipeg Hardware & Jobbing Company has sold stock to M. Steinburg.

Canora, Sask.—A. M. Darrach & Co., hardware, have sold stock to D. H. Sutherland.

Canning, N.S.—R. W. North, general store, has moved his hardware and other stock to Eaton & Co. store.

FIRE LOSS

Ceylon, Ont.—Stevens Bros., hardware, suffered fire loss.

OBITUARY

Clinton, Ont.—G. Lavis, implements, etc., is dead.

F. D. Canfield, Jr., a director and large shareholder of the Canada Foundries & Forgings Co., died in New York recently.

Edmund Steytler, general manager of sales, Pittsburg Steel Co., died at Atlantic City, N.J., October 8, 1917, after a lingering illness.

PERSONAL

Charles Pringle, general merchant, of Baldwin, Ont., spent a day in Toronto on business.

E. S. Sherwood, representing the T. E. Partridge Rubber Co., manufacturers of rubber goods, Ottawa, Ont., was in Toronto during the week.

H. Samuel has received word of the death in action of his brother Lieut. Cecil Samuel, late of the firm of Samuel Benjamin Company, Toronto.

Charles H. Laird, Jr., representing Lane Bros., manufacturers of hardware specialties, Poughkeepsie, N.Y., was in Toronto during the week calling on the wholesale hardware trade.

THE LATE BENJAMIN MOORE

Notice of whose death appeared in the October 6th issue of HARDWARE AND METAL.

L. P. Winslow, until recently connected with the Ontario Wind Engine Co., and E. R. Hambly, formerly associated with the Canadian Credit Men's Association, have joined the Winnipeg sales force of Messrs. Beatty Bros., Ltd.

Frank Parrish, for many years assistant general purchasing agent of the American Bridge Co., Pittsburgh, and well and favorably known to the trade, has been appointed purchasing agent of the Canadian Steel Corporation, Ltd., and will be located at Ojibway, Ont.

F. A. Healey, buyer, of Revillon Wholesale, Ltd., wholesale hardware merchants, Edmonton, was in the city the first of the week. Mr. Healey left Edmonton two weeks ago on a five weeks' buying trip, his time being divided between Hamilton, Toronto and Montreal, as well as some cities across the border. Mr. Healey left HARDWARE AND METAL a copy of Revillon's new general catalogue, notice of which appears in another section of this issue.

INDUSTRIAL NOTES

Montreal.—Canada File Company has registered.

Montreal.—Consumers' Glass Co., Ltd., has obtained charter.

Trenton, N.S.—The Humphrey's Glass Works will build a glass factory here to cost $150,000. E. H. Humphrey, of Trenton, is interested.

Port Colborne, Ont.—During a storm here on Friday, the ore bridge at the Canadian Furnace Co.'s plant was damaged to the extent of $80,000.

Chambly, Que.—The Canadian Leather Board Co. is in the market for shafting, pulleys and other equipment for its factory, which is being erected at a cost of $250,000.

Brockville, Ont.—At a meeting of the Canada Foundries & Forgings, Co., held here on October 10, it was decided to purchase the Delaney Iron & Forgings Co.'s plant at Buffalo, N.Y. The company will go extensively into the manufacture of marine forgings.

Cochrane, Ont.—The plant of the Metagami Pulp & Paper Co. at Smooth Rock Falls, on the Metagami River, is completed. The turbines have been tested, and the installation considered successful. The plant will be in operation within the next few days.

Victoria, B.C.—The Canadian Copper Co. has sold a $2,500,000 bond issue in New York to finance development of their properties at Copper Mountain and Similkameen. A concentrating plant to handle eventually 3,000 tons of ore per day will be constructed. The company has already spent a million and a quarter dollars on the property.

INCORPORATION

Gravelbourg, Sask.—Gravelbourg Oil Co., Ltd., has incorporated.

Montreal.—Canadian Union Iron Mines Corporation has been incorporated by A. Savard, T. F. Lyons, and N. Terk, all of Montreal, with a capital of $1,000,000, to acquire and develop mining properties. The head office is at Montreal.

Montreal.—The Dominion Battery Co. has been incorporated with a capital of $200,000 to manufacture batteries of all kinds, flashlights, lamps, heating appliances, etc., at Montreal. The incorporators are: Eldon Moir, John Campbell, and Oral N. Birchard, all of Montreal.

Cochrane, Ont.—The Ontario-Quebec Pulpwood Co. has been incorporated with a capital of $40,000 to manufacture pulp and pulp products. The provisional directors are: Charles M. Garvey, T. M. Weatherhead, and B. E. Lawless, all of Toronto.

CATALOGUES and BOOKLETS

NEW PUMP CIRCULAR

"7 Pumps That Take the Place of 700" is the interesting title of a 24 page circular just issued by Beatty Bros., Ltd., with head office at Fergus, Ont. The circular shows ready-to-ship pumps, pump standards, cylinders, pump leathers, etc. The circular is printed in green, gold, red and black and should prove interesting reading to retailers generally.

REVILLON WHOLESALE LTD. CATALOGUE

One of the most compact catalogues yet issued in Canada is that now being sent out to the trade by Revillon Wholesale Ltd. of Edmonton, Alta.

Several new features are embodied which will undoubtedly appeal strongly to the firm's customers, before mentioning which attention might be directed to the cover. In addition to carrying the firm's name, trade marks of various manufacturers are shown—lines of goods for which Revillon's are either agents or distributors. This makes a very novel type of cover and a decidedly attractive one.

The use of small cuts of uniform size for each class of goods has resulted in an excellent display of the merchandise. Each page or two facing pages carry a complete showing of one line of goods, so that comparisons of sizes and prices are easily made.

Inserted between every two pages is a double-sided, ruled sheet which can be used as a price book. The folio for each page is plainly visible through round hole punched in the corner of the price sheet. Revillon's expect this price sheet will prove of great benefit to the retailer, making the catalogue, as it does, serve a double purpose.

Throughout the book a uniform discount applies. In some cases standard lists are given, but Revillon's own list appears on every article, which undoubtedly will result in great convenience to the user.

The entire book was the work of the staff under F. A. Healey's supervision. All the printing was done in Edmonton. The cost of mailing the book was about twenty-four cents.

AUTOMOBILE ACCESSORIES

Many new items of automobile accessories are illustrated in the 1918 catalogue "A 8" of the Kinzinger, Bruce & Co., Ltd., Niagara Falls, Ont. Prefacing the catalogue proper, is the following statement: "In place of adding to the list new articles of doubtful or unproved value it will be seen that we have even discontinued a number of the popular items which we have formerly supplied." It is stated that this action was taken in order to concentrate all effort in perfecting the design and improving the production and quality of the selected list as outlined in the catalogue. Tire carriers for Ford cars with a three arm attachment and pressed steel basket are featured, as are also front and rear bumpers for heavy cars and for individual makes of lighter cars. Strength and appearance are the outstanding features of the bumpers which are finished in nickel and black finishings. The bars are in a great variety of styles including channel, round and diamond shapes, resilient spring bars and the double-leaf spring bar. Various styles of fittings are also provided for attachment to various types of cars. Complete specifications of size and weight are quoted with each bumper, and prices are given. The catalogue is well illustrated with sketches showing method of attachment to various makes of automobiles. Auxiliary radius rods for Fords, also robe rails and foot rests are illustrated with accompanying details.

AID MANUFACTURERS ON TARIFF MATTERS

Montreal branch of the Canadian Manufacturers' Association is taking steps to facilitate the securing of information on transportation tariffs for Montreal manufacturers. W. P. Hughes, the Montreal secretary, recently conferred with J. E. Walsh, the transportation manager of the association, in connection with the revision of the tariff files. The result is that a list of about 500 tariffs is available in Montreal which information formerly had to be secured from Toronto by members.

It has also been decided to form a special transportation committee of the executive committee to co-ordinate still further the plans of the association for supplying transportation information.

His House in Danger.
—Cesare, in New York Evening Post.

TRADE INQUIRIES

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1337. **Barrels.**—An American firm wishes to secure supplies of barrels in Canada to be used in forwarding large stocks of cement and other building materials to the Allied Governments in Europe.

1339. **Machines.**—A manufacturer in Barcelona, Spain, wishes to secure Canadian machines for making fasteners, safety pins, sewing thimbles, dressmakers' hooks, etc., etc. He asks for catalogues and price lists and particularly the length of time that would be required to deliver the machines.

1341. **Birch dowels.**—A Liverpool firm makes inquiry concerning the above for after-the-war business.

1346. **Agencies in Belgium and the North of France.**—A Belgian refugee in England who was established in business from 1888 until the opening of the war, wishes to arrange for Canadian agencies in Belgium and the North of France for firms exporting wheat, barley, oats, rye, peas, beans, buckwheat, flaxseed, linseed oil, fish oil, cod oil, seal oil, corn oil, oilcakes, oil meal, agricultural produce generally speaking, flour and lumber.

1348. **Wooden tea trays.**—Two British firms wish to import wooden tea trays made in Canada similar to trays formerly imported from Germany and Austria.

EXTENSION TO PLANT

The Plymouth Cordage Co., of North Plymouth, Mass., announce the completion of two new warehouses, having a total storage capacity of over 200,000 bales of fibre and over 50,000,000 pounds of rope and twine.

The company states that the uncertainty of the transportation situation has made it necessary to carry in stock, at all times, sufficient fibre to keep the mills running for long periods, so that all sizes and kinds of rope may be ready for immediate shipment.

Both warehouses are of the same type of construction. The columns are of reinforced concrete and the floors are of the flat slab type. The walls are terra cotta block, filled in between piers of reinforced concrete. The window frames are metal with wire glass. Spur tracks of the New York, New Haven and Hartford Railroad run alongside the warehouses, while the compressed air industrial railway of the plant runs through each warehouse.

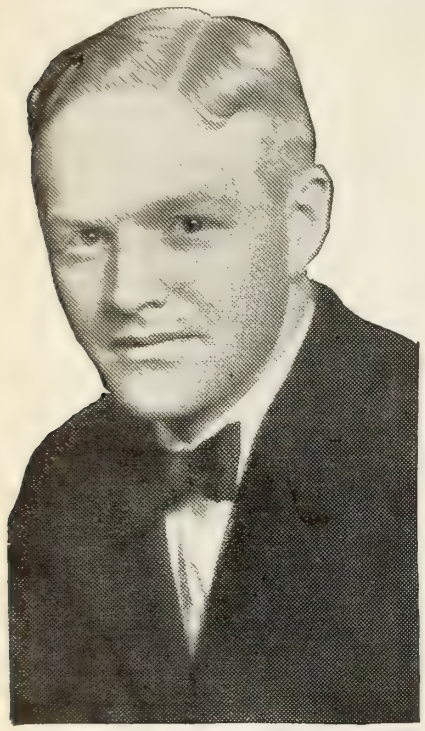
CONVENTION IN ATLANTIC CITY

The attendance at the American Hardware Manufacturers and the National Hardware Association annual meetings this week at Atlantic City is very large. These two great organizations exert an influence for good upon the trade in the States and its effect is even transmitted to Canada. Several representatives of Canada's wholesale and manufacturing trade are in attendance.

Noted Merchandising Expert Will Lecture

Frank Stockdale Will Deliver Course of Four Lectures on Subjects of Vital Interest to the Retail Trade.

FRANK STOCKDALE, known as the American Retail Merchandising Expert, has been secured by the Toronto Advertising Club to deliver a series of four lectures at Convocation Hall on the evenings of October 30, 31, and November 1 and 2. Mr. Stockdale for the past three or four years has been



FRANK STOCKDALE

an expert on business systems, who will lecture in Toronto.

connected with the Associated Advertising Clubs of the World, during which time he has given his lectures on retail merchandising. He was for many years engaged as an investigator, and was formerly a successful retail merchant. The Toronto Ad. Club has been trying for two years to secure Mr. Stockdale, and as evidence of his popularity it is stated that he is booked up for at least one year ahead. The strong point of Mr. Stockdale's lectures consists in showing merchants how to make more money out of their businesses.

The four lectures to be delivered in Toronto will be on subjects chosen from the following ten. Five of these Mr. Stockdale places under the heading of business building. They are as follows:—"Merchandise Display," "Informative Advertising," "Team Work in Retail Selling," "Intensive Selling," and "Business Building vs. Business Getting." The other five subjects grouped under a general heading of "Business Control" are as follows:—"Figures and 'Figgerers,'" "The Measure of a Merchant," "Speeding the Turnover," "The Babcock Test in Retailing," and "Who Pays for Advertising?"

Manufacturers, wholesalers, retailers, and bankers of the city are being circularized in connection with the series of lectures, which are supported by contributions from these sources. A downtown office at 502 C. P. R. Building (Tel. Adelaide 5489) has been secured, which will be a distributing point for tickets, and from which any information regarding the lectures may be obtained. It is expected a delegation from Hamilton will attend each lecture, and representatives of other parts of the province are also expected to be present.

Mr. Stockdale has given the same series of lectures in each of the large cities in the United States, and much of his success is attributed to the fact that he makes a study of local conditions and investigates local businesses before he applies the principles which form the foundation of his lectures.

PRIORITY IN AUTOMOBILE ACCESSORIES

(Continued from page 50.)

newspaper space and window displays, a silent salesman devoted to the many small lines could be used to advantage inside the store. It is well to keep this line prominently displayed and by bringing these goods before your customers persistently you establish your store firmly in their minds as the logical place to secure their supplies. "The casual observer of to-day is the keen, critical buyer of to-morrow" in the auto accessory game and probably a good seventy-five per cent. of your customers are prospective purchasers of motor supplies whom you can influence by keeping the line before them prominently.

Window display, newspaper advertising, interior store arrangement are three big factors in your success with motor accessories. They are being used extensively by many hardware men with splendid results and the auto accessory business is only in its infancy. As the line increases the hardware merchant will be found in the lead to obtain the big share of this business due to him.

SELLING SPORTING GOODS

(Continued from page 53.)

sion is the ability of the sporting goods salesman. He should tell the absolute truth and the goods sold must bear out his every statement. The sporting goods department is the place for the purchase of sporting goods. And every article in that department some day is going to be the recipient of a knock from a visitor. To-day the visitor or customer will go into a rampage of disgust because he sees a universally used wooden minnow equipped with a quantity of treble hooks. However, intelligent talk and perseverance are difficult potentials for the kicker to get around. They include so much that they welcome any attack. For the sake of winning his point the salesman must not argue, must not substitute an inferior for a well-known article. If the salesman is of this kind he is earning the money he is paid and will win without friction; otherwise the sale is lost.

NEW HARDWARE GOODS

cially recommended for bedding slate and tile roofs and for repair work in all places where a water-tight joint is required.

H. & R. SELF-LOADING PISTOL

Harrington & Richardson Arms Co., Worcester, Mass., are introducing a new self-loading (automatic) pistol of .32 calibre. The new pistol is claimed to be the result of much investigation and long experimenting to produce a hammerless pistol of the automatic type which shall combine the desirable features of other pistols, and to offer in the highest degree simplicity of construction, strength and reliability of mechanism, together with light weight and compactness. The pistol weighs 22 ounces, is 6½ inches in length, and has capacity for eight shots. The pistol is fitted with three safety devices, rendering it safe from discharge by a jar. It is claimed the pistol is so constructed that it has no small or weak parts, and the use of coil or spiral springs throughout reduces the liability of breakage to a minimum. A cartridge indicator indicates definitely whether there is a cartridge in the chamber or not. For cleaning and oiling the pistol can be dismounted and assembled almost instantly, it is claimed, and without the use of any tool.

Oakville, Ont.—The Aluminum Ware Mfg. Co., Ltd., has been incorporated with a capital of $100,000 to manufacture and deal in household utensils made from aluminum, glass, china, porcelain, parian ware, etc. M. H. Mairs of Toronto is one of the incorporators.

THE CLERKS' DEPARTMENT

A MAN OF MANY SIDES IS BRITISH FOOD CONTROLLER

Lord Rhondda is a Typical Welshman and With Great Capacity For Getting Things Done—An Intimate Sketch.

LORD RHONDDA, the British Food Controller, is so much in the public eye that a composite sketch of him, made up from references in various British papers and appearing in Current Opinion, is of unusual interest:

So wonderful a food controller is Lord Rhondda that the English obtain American food for less money than it now costs an American. That, at any rate, is the charge. Rhondda has been a lord for only a very little while. Before that he was a Mr. Thomas. His people were originally in the coal business, and, in spite of the fact that he is a nervous sort of Welshman, it is said of him in character sketches that come out regularly in London papers that he is a romantic type—the sort of a person out of which novelists make their heroes. He was put in charge of their food by the English and given all sorts of dictatorial power over sugar and other things because he had long made a recreation of farming. This is the summing up of the whole matter by the London *News*. He is a humorist, a writer of epigrammatical notes, a pugnacious controversialist and the most typically Welsh creature imaginable—far more so than Lloyd George. He is not so charming a person as that other ornament of the ministry, Winston Churchill, but he has, says the London *Post*, far more ability. He has not the eloquence of his chief, the Prime Minister, but is more lovable. He has spent much time in calculating the amount of bread a working man ought to eat in a week, how much milk a three-year-old child may consume in a day and how long a growing youth ought to go without meat. His application of his own rules to these cases makes him one of the most canvassed personalities in the whole British Isles. Lord Rhondda has been famous in England, indeed, for some months—a long time in these days of war.

Coal Instead of Art.

He has, affirms a writer in *To-day* (London), a manner no less romantic than his physiognomical aspect, the latter being especially noticeable owing to his jaw and his smile. They are both fine. He was intended, we read, for a painter, and his early propensities with brushes were deemed remarkable for one so young. Finally he took up his father's coal business, which he expanded and rendered prodigiously lucrative. He had already gone through Cambridge and achieved distinctions like a seat in the Commons and the presidency of various commericial chambers and trade federations. Yet these things, we are told, do not interest him. He is all for farming. He has at different times expended princely sums in finding out that tropical fruits will not flourish in Wales and that the climate of London is unfavorable to the banana. Experience has thus moderated the fury of his first agricultural enthusiasm, but he is a romanticist as much as ever.

He likes beans, and the English, generally, do not, and this is a grave disappointment to Lord Rhondda. He has to be satisfied with seeing that they now get no more sugar than is good for them. In that, according to the London *Post*, he displays a really Welsh genius. It has long been a theory of his that people eat too much and the war has enabled him to prove it. Another idea of his is that fasting is excellent for the complexion, his own being, however, but an indifferent illustration of his theory. It is Welsh and swarthy, for Lord Rhondda belongs to the breed, our British journalistic authority affirms, which produces the black-haired, short and stocky strain. He proves it with his fist, a powerful weapon by means of which in days past he delivered uppercuts and fought until his nose bled and his antagonist had black eyes. Time has taken away this prowess of his as a boxer, but he still in his sixties talks learnedly of the ring. This propensity does not commend him to the churchgoers of his Merthyr constituency, but he is famous for the big majorities he gets on election days.

A Fortune in Coal.

How much money Lord Rhondda has made out of coal is one of the subjects concerning which Socialist leaders occasionally manifest curiosity. He has a genius for talking coal-land-owners into signing contracts, although in the Commons he can not make a grand speech in Mr. Balfour's manner. He has an excitable way of working himself up to passion's point when engaged in business transactions and this emotion communicates itself to the other party to the transaction. In the innumerable controversies over coal-rights in Wales "D. A." (David Alfred Thomas), as he was then dubbed, would appear at a critical moment with a contract in his pocket, duly signed and sealed. He has painted the most terrible picture of the ruin awaiting anyone who would not give him a contract to extract the coal under a certain Welsh surface, land or water. This aptitude for getting rich by revolutionizing a great industry caused one Welsh labor leader to term Lord Rhondda a demon in one aspect, although an angel in another. "Lord Rhondda has a dual personality. He is a sort of industrial Jekyll and Hyde. He is both an industrial organizer and a capitalist and the functions of the two are quite distinct. The capitalist pure and simple is a non-producer. In so far as Lord Rhondda is an organizer of industry, a man whose talents enable wealth production to be made more efficient, he is a producer, a worker and a public benefactor. But in so far as he is a capitalist, a mere owner of wealth and a drawer of profits, he is a public menace." Nothing is more characteristic of Lord Rhondda than his compilation of sketches of himself in which he is depicted as an exploiter of the wealth of his native land for his own capitalistic behoof. Whenever he is inclined to conceit, as he admits himself, he reads over the various studies of his career which represent him as the economic monster gorged with coal profits. "How often," he was asked, "do you feel conceited?" To which he replied: "Not often." It appears, too, from the sketch in the British paper, that Lord Rhondda once said an indiscreet thing. If he were a coal miner he would be a Socialist. This confession was thrown in his teeth by a writer in the London *Times*. "It is quite likely that I may have said that," conceded Lord Rhondda. "If I were a miner I would in all probability be a Socialist, for I should not then have the knowledge and practical experience of the application of economic principles which I now possess." He was having one of his fights with David Lloyd George at the time, whose senior by seven years he is. They were furious fights but the men have patched up their differences until the war ends.

Lord Rhondda was on the "Lusitania" when she was torpedoed by a submarine. He is said to have expressed considerable annoyance subsequently at the finding of Lord Mersey's court that "probably the disastrous attempts of the frightened passengers to assist in the launching operations" added to the difficulties of the crew in lowering the boats. His own view seems to be that the passengers were all heroes. "I suppose, in deference to Socialist opinions," he told a journalist, "I ought to except myself." The editor of *The New Age* does not think so. Lord Rhondda had gone to Canada with full powers to negotiate with the Dominion Government, although what he achieved there is one of the secrets of the war. "How did you feel?" he was asked by a reporter when he landed after the torpedoing, to which he replied: "Wet." Upon reaching home—he lives in South Wales—he was asked by a constituent if he had prayed during those awful moments after the torpedo struck, to which he replied: "I had already said my prayers before I had my breakfast." The statement is received, says the London paper, with ridicule, at least in South Wales.

A Farmer Graduate.

If farming were not so notoriously the recreation of Lord Rhondda, he would never have been food controller at all. This is the opinion of a writer in the London *Chronicle*, a paper not disposed to view the statesman sympathetically. He thinks he knows all about the condition of agriculture in England, but he has only the knowledge of the amateur. The stolid English farmer of the unscientific type does not take kindly to some of the Welshman's innovations. The householders do not relish the introduction of cards for this and that. Lord Rhondda has surprised those who knew him best by his unexpected patience with the discontented, his diplomacy, upon occasion even his fluency. At the end of

(Continued on page 72.)

WHAT OTHER PAPERS SAY

THE NEW STEEL PRICES

From *The American Metal Market*

The maximum price standards announced at Washington the afternoon of September 24th were:

Iron ore, 1917 prices, subject to modification by the amount, if any, that the lake freight rate should vary from the $1.00 season rate of 1917.

Pig iron, $33 for foundry and malleable at valley furnaces.

Steel bars, 2.90c; shapes, 3.00c; plates, 3.25c, Pittsburgh basis.

The maximum price standards announced at Washington the evening of October 11th were:

Billets 4x4 and larger, $47.50; billets under 4x4, $51; slabs, $50; sheet and tin plate bars, $51, all per gross ton, f.o.b. Pittsburgh or Youngstown.

Wire rods, $57 per gross ton; grooved skelp, 2.90c; universal mill skelp, 3.15c; sheared skelp, 3.25c; shell steel rounds, 3-inch to 5-inch, 3.25c; over 5-inch to 8-inch, 3.50c; over 8-inch to 10-inch, 3.75c; over 10-inch, 4.00c, all f.o.b. Pittsburgh.

No prices have been fixed on wrought iron.

The basis prices settled September 24th were universally admitted to be fair all around. They promised to afford excellent profits to producers, while they gave our Allies and the general public much lower prices than were being asked, and the Government agreed to pay only slightly higher prices than it had had in mind, or than would have been arranged if the "one price for all" principle had been adopted and the Government had paid its own fixed price, under the commandeering power and other prices had been left to the market.

The question with the additional prices announced last week is whether they are in keeping with the basis prices, for it was the distinct understanding that all other prices should be adjusted in fair relation to the basis prices.

The opinion of the *American Metal Market*, after careful consideration of all the facts, begun as soon as the basis prices were agreed upon, is that they are admirably in line with the conditions set. The only recognized trade rule for unfinished steel is one and one-half times the price of pig iron at valley furnaces, but the more common application has been to take basic pig iron and add $1 to represent Bessemer, taking one and one-half this to get billets, and then add $1 for sheet bars. When, however, pig iron costs are advanced somewhat unduly by the scarcity of coke and the high lake freight on iron ore, the proportion of one and one-half times pig iron to get billets is a trifle strong. When, however, mills are striving for maximum output the fact that billets and sheet bars are rolled in the same class of mill precisely, and at superficially about the same cost, yields to the fact that sheet bars must be accurate weight per foot while billets need not be, hence it is a fair compromise to set sheet bars at $51 and billets at $47.50. While scarcity must not be allowed to dictate price, or we should be adopting the principle that the classes of steel the Government most needs should pay the largest profits, steel not needed for war, but perhaps used for luxuries paying the smaller profits, still some consideration should be given to the fact that small billets and rod billets are very scarce, hence $51 for small billets can hardly be considered out of line. Slabs at $50 are fair both to maker and to consumer. If a mill buying slabs at $50 per gross ton cannot make very considerable profits selling plates at $65 per net ton the slabs if available should be used elsewhere or the practice corrected. Such a plate mill has a very small capital investment per ton of output compared with the concern that carries the material from the mineral in the ground clear through the plate.

The skelp prices are quite in line with bars at 2.90c and plates at 3.25c, grooved being at the former, and sheared at the latter prices, while the finish of the whole schedule is shown by universal mill skelp being set at 3.15c, as nobody has been building universal mills at high cost, while this has been done and is being done in the case of sheared plates, and the builders are entitled to an extra price that will enable them to amortize the extra cost of their mill within a reasonable time.

Finally, the wire rod price of $57 is $9.50 above 4x4 billets. Ten-year averages, through 1913, were $30.93 for rods and $24.82 for Bessemer billets, showing $6.10 spread. By far the biggest slash was in rods, and properly, for wire products were kept at reasonable prices, to protect the trade, while wire rods were sent up by the bidding of the Allies who had to have rods for making submarine nets, and exceptional profits upon such material cannot be countenanced.

The general and by far the most important observation with respect to this second batch of steel prices is that the Government is going about its work in the most thorough manner. It is not content to agree upon some basis prices and then let the rest of the schedule be adjusted in loose manner, perhaps out of line with the principle supposed to be adopted. It must be accepted that the control is to be rigid and complete.

This is noticed with respect to other steel commodities for which prices are eventually to be fixed, that the prices are to be strictly in accord. It will be no case of fixing a low base price and then making it up on extras. Nor is it going to be a case of the Government resting content on securing these prices in the case of its purchases for itself and its Allies. The general public was included in the agreement, and it is not going to be excluded in the performance. The Government compromised, by agreeing to pay somewhat higher prices, for its own materials, than it had had in mind, for the purpose of pulling down prices for the general public and obviously it is not going to rest content with performance of that part of the bargain that is against it. While no producers have agreed to sell to the general public material they are not in position to deliver they did agree not to sell to the general public, to anybody at all, at higher than the prices settled upon. There is no possible room for controversy on this point.

LEARNING FROM THE WAR

From *Hardware Age*

It is the testimony of history that despite the brutality and savagery of war, it nevertheless teaches enduring lessons both to individuals and nations. This is in accordance with the story of experience that human nature receives most of its advancement from stress, trial and misfortune. We are slowly imbibing the feeling of a national spirit and of co-operation as a people, but what are we learning in the way of business? One essential is the realization that conservation can be applied to matters other than food, and that nothing in commercial life needs it more than merchandising, especially as relates to the intelligent care of stock on hand.

Almost every dealer in the hardware business, whether wholesale or retail, has on hand goods which are "eating their heads off" in interest, insurance, rent and other carrying charges, and the dealer usually is entirely oblivious of this very expensive fact. It is a good time now, in view of the uncertainty of the future, to clean house and get the stock of merchandise down from the speculative point of view to that of a merchandising basis.

Concentrate largely on staple goods and keep a supply of them. Don't bother about the odds and ends and things of luxury that sell rarely and for which there is a limited demand. Cut out duplicates in the line. Reduce assortments of those items where there are two or more in stock and one will answer for them all. It does not matter now if unimportant items are short. Don't try to have a little of everything in the hopes that some day somebody will call for it. The manufacturers have started cutting out useless assortments in their line, and the dealer can well follow suit.

Sell what you have on hand, for it can easily be done by intelligent salesmanship, rather than add unimportant things that only a few cranks want. Have bargain sales of goods you have had on hand a long time and then turn them into money, even if the process does not show a big profit. If an article is a "sticker," put a price on it that will move it. The longer you have it the harder it will be to get rid of.

Another lesson is that of co-operation. Doing things for one's country does not consist solely in working for the nation as a whole. Commence likewise at home by doing things for the place in which you live. That is by far the most effective and enduring way of building up the Nation's wealth and strength.

The welfare of the country consists in the general well-being of the many, not in the special riches of the few.

There should be a commercial club in every town and hamlet in the country, not for the purpose of meeting occasionally and passing resolutions, and also of providing a professional secretary with an easy living, but rather to be the inspiration of all the surrounding country, and to furnish the initiative for action in the ways of good roads and streets, running water, electric lights, good schools, places of amusement and all those factors which make for the progress and improvement of the people.

Most of all, there must be a realization that competition had better be in enterprise and quality than merely in prices. And there must be a realization of the importance of close and cordial relationship, business and personal, between those in town and those on the farm.

PROBLEM OF FUTURE PRICES

From *Hardware Age*

Governmental action in fixing prices for staple steel and iron products brought to a

(Continued on page 76)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

THERE has been a steadily upward trend to the market for hardware commodities during the week. A number of lines of automobile accessories have also been increased in price. While lower prices have been established on iron and steel by the Federal Trade Commission in the United States, this factor has not as yet affected the manufacturing situation, as the mills are mostly working on Government orders and it will be some distance in the future before lower prices can be obtainable for the domestic trade. The only commodity in which there is evidence of weakness is in galvanized sheets, in which slightly lower prices have been recorded. Intimations are made in some quarters that there is a probability of an embargo being placed on shipment of these from the United States, in which event prices will in all probability rule firm again in the Canadian market. Lines in which advances have been recorded include tire chains, bumpers, all cotton products, such as twine, rope, sashcord, candlewick, awning cord and seine twine; firmer chisels and framing chisels, mouse and rat traps, table cutlery, oilers, lubricating oil, revolvers, fishhooks, horse pokes, hay rakes, canthooks and canthook handles, peaveys and peavey handles. Linseed oil was in weaker market with declines registered, while turpentine was in stronger market with advances. Business has been seasonably good. Considerable shipment of winter goods is now going on.

MONTREAL MARKETS

MONTREAL, October 17.—Steadiness in the manufactured lines for the most part, a phenomenal shortage of sheet metal, and dullness to weaker tone in the ingot metal markets characterise the hardware trade conditions in Montreal for the current week. Paint trade supplies are steady for the time being, but the weakness in ingot lead may affect white lead in oil. There is good demand for all kinds of heaters, and coal oil for the oil heaters has been in brisk fall demand also. A better demand for rope was noted recently. Retailers are sorting up stock very carefully now according to the reports of the wholesalers, and while no speculative demand is noted, buying is brisk and business is good in the main. Influence of United States conditions on the markets is producing some hesitation, mainly in the case of metal products.

Cotton Twine, Rope And Candlewick Up

Montreal.

SHELF GOODS, ETC.—Again the change lists have been less crowded in Montreal, and shelf goods and heavies alike are without many alterations.

Cotton Goods Firmer

In cotton goods, however, there is more firmness, and cotton rope is advanced so that 3/16 in. size is now 50c a pound, and ¼ in. and up 48c.

Sash Cord Advances

Sash cord has also advanced and No. 6 is now costing 55c, No. 7, 54½c, and sizes No. 8 to No. 12, 54c a lb.

Candlewick and Twine Up

All cotton candlewick and counter twine is subject to an advance of ten per cent. this week.

Pipe Cutters Advanced

Barnes and Saunders pipe cutters are up this week by ten per cent. over previously quoted prices.

Savage Rifles Scarce

It is almost impossible to secure supplies of Savage rifles now. The manufacturers are busy with war orders and are not allowed to supply the civilian trade even if they could deliver the necessary production plus their war orders, but they are running to capacity on war supplies. Many orders from retailers have been coming in for Savage rifles owing to the hunting season now on.

Nails And Wire Still Steady

Montreal.

NAILS AND WIRE.—The market for nails and wire is unaltered this week, but firm with demand for nails and wire both showing the usual fall movement. Wire is being called for in country districts now where farmers are doing a little repair work to fences and enclosures following harvest. The base price for standard steel wire nails remains at $5.50 per 100 lbs., and for cut nails $5.75. Wire is still at $6.50 base.

No Changes In Iron And Steel As Yet

Montreal.

IRON AND STEEL.—There are no price changes to record in the market for the ordinary lines of iron and steel in demand by the hardware trade at large. The business is to secure supplies, however. It is difficult to get supplies of iron from the mills, and though sufficient stocks exist to meet retail trade demands for some time yet, the market is very firm, and doubts exist occasionally as to the replenishing of stocks. As regards price outlook the market is looking for some effects of the situation which has been developing in the United States, and is steady in tone for the present.

MONTREAL—

Great Lack Of All Sheet Metal Lines

Montreal.

SHEETS, PLATES, ETC.—It is felt by those interested in the sheet metal situation that a more pronounced scarcity of tinned iron, Canada plates, cokes, and similar goods could hardly have been considered possible earlier in the year. The situation in Montreal is practically one of famine for certain lines of sheet metal. That is to say the intending purchaser who is unprotected by contract with rolling mills made long

ago cannot secure supplies except by paying high prices in the way of premium over and above market quotations of recent date. Tinned iron in the large sheets is hardly available at all. Manufacturers with stocks of it for their own purposes would not consider parting with any even at premium prices for it is most uncertain of supply for the future. In fact in the opinion of the representative of one large firm of importers of sheet metal no more can be expected from the United States this year, and none from England for months to come. This refers, however, to supplies for the user who is not covered by contract. Those who contracted for supplies of plates some time ago may have their contracts filled from time to time, and from such supplies the ordinary consumer may be able to get a share at higher prices than the present merely nominal quotations given in current quotations. Some Canada plates are available, and the market in galvanized sheets is not so seriously short of stocks as in tinned iron and cokes. But there is no abundance of any line of sheet metal at present.

Demand For Heaters Reported Excellent

Montreal.

STOVES, HEATERS, ETC.—Demand for all kinds of heaters has been exceptionally good this season, but for ranges and cook stoves there is room for improvement according to views of wholesalers and some manufacturers. As regards the outlook for the future the market awaits news from the United States on the matter of iron and steel suitable for this industry. Sheet metal is exceptionally scarce, and this affects the manufacture of stoves, stovepipe, and the many varieties of hollowware—galvanized, tinned, and enamelled—which depend on the sheet metal market for their basic material. No advances in prices are announced or predicted this week, the tendency being rather to steadiness with an expectant outlook under present circumstances.

Gasoline And Coal Oil Still Unchanged

Montreal.

GASOLINE, ETC.—No change in quotations for gasoline in Montreal this week. In spite of firmer values for crude oil the product maintains a very steady market. Demand is good, and production is actively maintained. The formerly mentioned facts tending to indicate firmness in this market are still amongst the features of the situation but as pointed out in the Toronto report last week conditions across the border have a strong bearing on the Canadian situation, and may steady the market for a time yet. Demand for coal oil for heating purposes was particularly strong this fall owing to difficulties in the way of getting coal and the desire to conserve the coal fuel against the depths of winter. Gasoline is still quoted at 32½c per Imperial gallon and coal oil Royalite 17c, Palacine 20c per Imperial gallon.

Market Outlook In Rope Is Still Firm

Montreal.

CORDAGE.—The market for the main lines of rope and cordage is steadily firm. Difficulties affecting the raw materials for rope-making sisal, Manila, and other hemps are not relaxed in any way. It is even regarded as possible now that there may be more trouble in shipping across the Pacific which would make the market for Manila yet firmer. Demand exists for general lines of rope and cordage at present, there being a brisker state of business than had prevailed during the late summer and early fall. No particular demand for rope for special industrial purposes is noted, however, but retailers are adding to stocks, or sorting up on various lines. The market outlook is firm.

Lead Manufactured Products Steady

Montreal.

LEAD PRODUCTS.—There is no change in the prices of the principal lines of lead manufactured goods, pipe, sheet lead, etc. but the weak tone of the ingot metal market indicates a very strong possibility that the lead products may be lower yet. Demand for these lines is not active, and the view of men of experience in the metal markets is that lead may not quickly recover strength. Under these conditions the outlook in the lead products market is not to advance meantime.

MONTREAL—

Lead sheets, 3½ lbs. sq. ft.	0 15¾
Lead sheets, 4 to 6 lbs. sq. ft.	0 16

Market For The Old Metals Quiet

Montreal.

OLD MATERIALS.—Dullness of market and no change in quotations is the story of the old materials this week. Supplies are more than enough for demand in most lines, and demand is deferred pending the developments across the border which are having a depressing effect on all the metals more or less. Lead is particularly weak at present and the market for old lead products is not active. The outlook is not immediately indicative of coming firmness in any line, rather towards weaker tone, but events may alter this without much warning.

Ingot Metals Are In Dull Market

Montreal.

INGOT METALS.—The feature of the ingot metal market is the weak tone of lead. The other metals are in steady market, but without any great activity.

TIN.—Quotations for tin are still 64½c to 65c with demand quiet, and tendency steady.

COPPER.—The market for copper is uneventful. Quotations are steady at 30c to 31c.

LEAD.—Pronouncedly weaker is the tone for lead, and quotations are now 10½c to 11c.

SPELTER.—There is no alteration in the quotations for spelter, this metal being quoted at 11c to 11½c.

ANTIMONY.—The market for antimony is unchanged at 18c to 19c. Demand small.

ALUMINUM.—At 65c the market for aluminum continues steady and quiet.

TORONTO MARKETS

TORONTO, Oct. 18.—The week has again been marked by the number of price changes which have been recorded. From indications it would seem that the steadily upward trend has not yet been arrested. It is true the United States Government has named lower prices for certain steel and iron commodities but the general opinion prevails that these lower-priced materials will not be obtainable for months in the future. Manufacturers must still work on high-priced materials because of contracts. On account of these contracts mills are able to take no additional business. Cotton products, firmer chisels, framing chisels, steam cocks, mouse and rat traps, table cutlery, oilers, revolvers, fishhooks, butchers' beams, horse pokes, hay rakes, canthook handles, peavey handles, include lines in which changes have been made in an upward direction. Linseed oil is down in price while turpentine is higher. Business has been seasonably good, shipments going forward on numerous winter lines such as skates, hockey sticks and kindred commodities.

Tire Chains Have Been Increased in Price

Toronto.

AUTO ACCESSORIES. — Dreadnaught and Imperial tire chains have been advanced in price to the consumer and retailer. On the popular size for the smaller cars the new list price is $4.50, the former list price being $4.10 for Dreadnaught type. For the Imperial 30x3½ size the former list price being $3 while the new list price is $3.30. For the larger size tires 34x4 the new list price on Dreadnaught is $5.50 and on Imperial $4.30, the former prices being $5 and $3.70, respectively. To the retail trade these prices are subject to a discount of 25 to 30 per cent.

Bumpers Advance Approximately 15%

Toronto.

AUTO ACCESSORIES.—A recent advance announced by Canadian manufacturers of bumpers for automobiles has also been made effective by wholesalers and provides for an increase of approximately 15 per cent. Channel bar bumpers which formerly sold for $8.75 list have been advanced to $10.10 list. Spring Universal bar bumpers which formerly sold from $11 list are now quoted at $14.75 list. Both of these designs are for nickel-plated type. Nickel channel bar for Ford cars was formerly at $8.50 list and is now $12.50 list price. Nickel spring bar bumper for Fords was formerly $10 list and is now $13.50 list. Nickel channel bar bumpers for Chevrolet were formerly $9 and are now $11, while the nickel spring bumper for Chevrolet was formerly $11 and is now $14.75. Above prices are subject to discount of 25 per cent. on small quantities and 30 per cent. on larger quantities to the retail trade. Canadian manufacturers have now taken to the manufacture of bumpers, which formerly came from the United States.

Lap Robes Now Obtained in Canada

Toronto.

AUTO ACCESSORIES.—The season is now here when the sale for lap robes will be heavier. The necessity for providing comforts against the fall and winter weather in order that winter driving may be made pleasant brings the robes in the class of a much-desired commodity. It is interesting to note that Canadian manufacturers now practically have the field to themselves. Before the war the Scotch robes were the big sellers in this market largely to the exclusion of Canadian makes. War conditions in the old land with the necessity of providing munitions and equipment effectually shut the Scotch robes from this field. Prices of robes have advanced approximately 25 per cent. over those of last year. The high price of wool and the difficulty of securing it have been the factors that have operated toward higher cost.

All Pottery Lines May Soon Go Higher

Toronto.

JUGS, CROCKS, TEAPOTS.—Intimations have been made in reliable quarters that there is strong probability that all lines of earthenware pottery are likely to increase in price within the next few weeks. If the advance is put into effect it will include earthenware jugs, butter crocks, churns, bowls, bottles, teapots and other lines. The factor that is operating to cause higher prices is the increased price of coal. The local manager of one of the large pottery company's stated that where ordinarily they have to pay $1.50 per ton for the grade of coal they use under contract last year their coal cost them in the neighborhood of $4.50 per ton and they anticipate the cost this year will be in the neighborhood of $6.50 per ton. Coal companies will not enter into contracts to deliver coal and the pottery companies are forced to buy in the open market. The item of fuel is the most important factor in the price of pottery as the raw materials cost but very little. The firing process, however, consumes great quantities of coal. If the advance takes place it may be in the neighborhood of 25 per cent. Companies will not take any forward bookings at present price and will take business only on the basis of immediate delivery.

Cotton Products All Moved Higher

Toronto.

TWINE. ROPE. SASHCORD.—An advance of from 1½c to 2c per pound has been made effective in the price of all cotton products during the week due to the steadily upward trend of the raw cotton market. Spot cotton in the New York market is now quoted at 28.45c per pound which constitutes a new high record. Cotton duck has been advanced 7½ per cent. Cotton rope is now quoted as follows: ⅛-inch, 56½c to 59c per pound; 5-32-inch, 53½c to 57c lb.; 3-16-inch, 50½c to 54c lb.; ¼-inch and up, 49c to 52½c. Awning cord is now quoted at 30 per cent. off list prices in some instances, while with other dealers the following net prices prevail: White—No. 3½, $1.80 to $1.85; No. 4, $2.90 to $2.95; No. 4½, $4 to $4.05; Drab—No. 3½, $2.20; No. 4½, $4.25. Cotton twine, three-ply, is now quoted at 56c lb. and four-ply at 60c lb. Hercules sashcord No. 6 is quoted at 55½c per pound; No. 7, 54½c; Nos. 8 to 12, 54c. Candlewick has been advanced 5c per pound and is now quoted from 57c to 60c per pound. Star cotton clothes-lines are quoted as follows: 30-foot, $1.90; 40-foot, $2.30 dozen; 48-foot, $2.80; 60-foot, $3.50 dozen; 100-foot, $5.80 dozen. Bag twine is quoted at 66c per pound. Cotton seine twine for No. 18 and up is quoted at 68c and under No. 18 at 69c per pound.

Firmer Chisels and Framing Chisels Up

Toronto.

CHISELS, DRAW KNIVES.—A considerable advance has been recorded in the price of socket firmer chisels through the change of the discount, the new discount being 66 2-3 per cent. off list as compared with the former discount of 70 and 10 per cent. Framing chisels, butt chisels and socket sleeks have all been moved higher, the new discount 60 per cent. off list, with an extra of $1 per dozen net for level edge. Carpenters' draw-knives, Razor Blade and Wagon-makers, are now quoted at 60 per cent. off list.

Mouse Traps and Rat Traps Advance

Toronto.

TRAPS.—An increase has been put into effect on mouse traps and rat traps during the week which now makes the net price on Holdfast rat $1.05 per dozen and Holdfast mouse 25c per dozen. Out-of-Sight mouse traps are now quoted at 75c per dozen and Out-of-Sight rat at $1.35 per dozen. Wood chokers, four-hole are quoted at $1.15 and five-hole at $1.25 per dozen.

Booking Prices on Hose Couplings, Nozzles

Toronto.

COUPLINGS, NOZZLES, STEAM COCKS.—Wholesalers in some instances have named spring booking prices on brass hose couplings and on nozzles. Half-inch couplings are quoted at $1.80 per dozen and ¾-inch at $1.90 per dozen. Canadian Gem nozzles are being booked at $5.75 per dozen. Higher prices were also recorded on brass stop cocks or steam cocks in some quarters, the new discount being 31 per cent. off list as compared with the former price of 33 1-3 per cent. off list.

Table Cutlery Advances 5 Per Cent.

Toronto.

CUTLERY.—Higher prices have been announced by the manufacturers in England on the Joseph Rodgers' table cutlery, including dessert and table knives, forks and carvers. The increase amounts to approximately 5 per cent. Pocket knives of the same make have not been increased in price. Wholesalers at the time of writing had not arranged their new selling prices but are expected to be in shape in the near future.

Coppered Oilers Advance 7½ Per Cent.

Toronto.

OILERS.—An increase of 7½ per cent. has been made effective on coppered steel oilers and the following prices now prevail: No. 10, $9.40 per dozen; No. 11, $12.80 dozen; No. 12, $1.85 dozen; No. 13, $2.30 dozen; No. 13A,

$2.50 dozen; No. 14, $2.70 dozen; No. 14A, $3.10 dozen; No. 14AA, $3.30 dozen; No. 14B, $3.50 dozen; No. 16, $4.30 dozen.

Revolvers and Butchers' Beams Up

Toronto.

REVOLVERS, SCALES.—Prices on Iver-Johnson revolvers have been increased in price during the week and safety hammer nickled .32 and .38 calibre are now quoted at $8.75, with blued at $9.10 each. For the .32 and .38 calibre blued six-shot the price is $10.15 each. Safety hammerless in nickeled are quoted at $9.60 for .32 and .38 and $10 for .32 and .38. Butchers' brass weigh beams are now quoted at a discount of 25 per cent. off new list prices.

Fishhooks Prices Have Been Increased

Toronto.

FISHHOOKS.—In anticipation of the next season's catch slightly higher prices have been announced. There has been talk in recent days of cheaper fish due to government influences. The present increase in fishhooks may be pointed to by fishermen as a reason why they should not be compelled to take less for their labor. Following are the new prices on some of the various numbers: No. 1 to 10, 95c per thousand; No. 1-0, $1.20 per M.; No. 2-0, $1.35 per M.; No. 3-0, $1.50; No. 4-0, $1.65; No. 5-0, $1.80; No. 6-0, $1.95 per M.; No. 7-0, $2.50 per M.

Three-in-One Oil And Horse Pokes Advanced

Toronto.

OIL, HORSE POKES.—On certain sizes of Three-in-One Oil higher prices have been made effective, the large size now being quoted at $1.90 per dozen. On the small size prices remain unchanged at $1.15 per dozen. Household size is quoted at $4.10 per dozen and Handy tins at $2.10 per dozen. Horse pokes have again been moved to higher levels, following an advance recently announced. Champion pokes are now quoted at $6 per dozen, Dictator at $6.90 dozen, Climax at $8.40 dozen and Pearson at $10.45 per dozen. In the case of the Pearson the increase was from $8.75 per dozen, the advance therefor being $1.70. Some concerns continue to quote Pearson at $9.50 dozen.

Hay Rakes, Cant Hooks and Peavie Handles Up

Toronto.

RAKES, HANDLES.—Hay rakes is one of the numerous lines to be increased in price during the week, iron bow straight being now quoted at $3.60 dozen and bent at $3.80 dozen. Wood bow straight is quoted at $3.85 and bent at $4.15 per dozen. Eureka hay rakes are quoted at $4.25. Cant hook handles have advanced, 4-foot size now selling at $3.75 dozen; 4½-foot, $4.15; 5-foot, $4.70 dozen. Maple peavie handles in 5-foot length are quoted at $4.95 and 5½-foot length at $5.35.

Seine Twine Also Up

In line with the advance in other cotton products is that in cotton seine twine to 67c per pound for Nos. 12-15 and 65c per pound on size Nos. 18-72.

Gasoline Used Faster Than Produced

Toronto.

GASOLINE, COAL OIL.—Statements recently by A. C. Bedford, president of the Standard Oil Company of New Jersey, show that the production of crude oil in 1916 was less than the amount consumed. In other words 308,272,519 barrels were produced and there were consumed in the same year 324,375,503 barrels of crude oil in the United States. Now that the United States has entered the war there will be a greater demand for the product. In addition to these figures nearly 23,000,000 barrels of Mexican crude were imported and used in the United States during the same period. The consumption of crude oil is none the less greater in 1917 than it was in 1916. Some Canadian oil companies state their business this year has eclipsed all other years. While the price of gasoline and coal oil is very firm in view of the situation there is no intimation that prices are likely to advance. The possibility of regulation of prices is having a steadying effect in the United States and this is reflected in the Canadian market. Gasoline is still quoted at 31½c and 32c and benzine 1c per gallon less. Coal is unchanged at prices given in current quotations.

Government Purchases of Rope Are Now Good

Toronto.

ROPE, TWINE.—Owing to the activity in shipbuilding there has developed a good business in rope for the equipping of ships and also for use in their construction. This comprises the bulk of the trade at the present time. Domestic demand is somewhat quiet. Prices are firmly maintained at recent advances, both on sisal rope and manila rope. In the primary market there is some talk of a further advance on sisal fibre. The appointment of an expert by the Federal Trade Commission to examine into costs of production has not had the effect as yet of causing the sisal farmers of Yucatan to get panicky. Prices on rope will be found in current quotations.

Stoves and Ranges Go Out Fast As Made

Toronto.

STOVES, ENAMELWARE. — The item of most interest in the stove and range market is the readiness with which they are absorbed once they are finished by the manufacturers. Orders for stoves have been very good and manufacturers are shy on material and labor is scarce. One concern has the output of their factory booked for the balance of the year. Oil stoves continue in excellent demand. Prices on furnaces, stoves and enamelware were steady, no changes having been recorded.

Nail Situation Holds Without Change

Toronto.

NAILS, WIRE.—There were no further changes in wire during the week, the most recent change being that in stovepipe wire recorded last week. Wire nails are still being quoted at $5.45 in the majority of instances by wholesalers although it is understood where competition has been keen these prices have been shaded somewhat.

New Prices On Canthooks And Peaveys

Toronto.

CANTHOOKS, PEAVEYS.—New prices have been announced on Pink's peaveys and canthooks. Malleable socket, duck bill hook, Eastern peaveys, are now quoted as follows: 4-foot, $24.50 per dozen; 4½-foot, $25 dozen; 5-foot, $25.50 per dozen; 5½-foot, $26 dozen. Duck bill canthooks, with malleable clasps and maple handle, are quoted as follows: 3½-foot, $19 dozen; 4-foot, $19.50 dozen; 4-foot by 2½ in., $20; 4½-foot, $20.50. Canthook maple handles, of the same make, are quoted as follows: No. 63, 2⅜ in.—3½-foot, $3.90 dozen; 4-foot, $4.25 dozen; 4½-foot, $4.60 dozen; 5-foot, $4.95 dozen; 5½-foot, $5.30 dozen. No. 63a, 2½ in.—4-foot, $4.25 dozen; 4½-foot, $4.60 dozen; 5-foot, $4.95 dozen; 5½-foot $5.30 dozen. No. 63b, 2¾ in.—5-foot, $6.35; 5½-foot, $7 dozen. No. 63c, 3 in.—5½-foot, $8.50 dozen; 6-foot, $9.25 dozen. Pink's maple peavey handles are quoted as follows: No. 64, 2 5-16 in.—3½-foot, $3.90 dozen; 4-foot, $4.25; 4½-foot, $4.60; 5-foot, $4.95; 5½-foot, $5.30. No. 64a and 64b, 2⅜ in.—3½-foot, $3.90 dozen; 4-foot, $4.25; 4½-foot, $4.60; 5-foot, $4.95; 5½-foot, $5.30 dozen. No. 64c, 2¾ in.—5-foot, $6 dozen; 5½-foot, $7. No. 64d, 3 in.—5½-foot, $8.50; 6-foot, $9.25 dozen.

Mining Tool Steel And Spring Steel Up

Toronto.

IRON AND STEEL.—An increase of $1 per hundred pounds has been recorded in the price of mining tool steel, which now makes the range of prices from $19 to $26 per 100 pounds. Lower range on spring steel has also disappeared, and prices now range from $11.50 to $15 per 100 pounds. Other iron and steel commodities remain unchanged. Canadian steel mills have been making some light shipments during the month on merchant account. There is but little change in the American situation, as it is impossible to get any further orders placed there and

lower prices set by the Government have accordingly not been a factor. Demand locally is fairly good.

Rumors Of Embargo On Galvanized Sheets

Toronto.

SHEETS, PLATES.—Local dealers in sheets and plates state there is a rumor current that the United States is likely to place an embargo on galvanized sheets. Already there has been placed an embargo on black sheets of No. 10 gauge and heavier. Intimations were made by Government authorities that some one hundred and fifty articles were to be placed on the embargo list, and as yet only about fifty of these have been named. Local dealers in sheets assert their belief that galvanized sheets is likely to be one of the number. If such a condition comes about, local stocks will be in strong demand, and the weakness now apparent may disappear. There was a grading down of prices in some quarters during the week, but for the most part quotations did not go below $11.25 on 10¾ oz. Prices on black sheets remained unchanged.

Government Now Taking All Boiler Tubes

Toronto.

BOILER TUBES.—Intimations have been made to dealers in boiler tubes that all stocks now held must be held subject to the call of the Government. This means that the domestic trade will not be served from existing stocks. Where supplies will come from for domestic account is one which is causing concern, as present available stocks will soon be exhausted. Prices remained unchanged.

Lead Wool And Solder Go Down

Toronto.

LEAD AND ZINC PRODUCTS.—Owing to the weakness in the primary lead market, declines have been registered in lead wool to the extent of 1c per pound, making the selling price now 15c. Solder has also declined for the same reason, namely, weakness and lower prices in the ingot metals. Guaranteed solder is down 2½c to 37½c; strictly half-and-half also down 2½c to 35c; commercial is down 3¾c at 32¼c, and wiping solder is down 2¾c to 37½c. Lead sheets and lead pipe remained unchanged. Demand for these commodities is light at present time.

Yellow Brass And Copper Again Weak

Toronto.

OLD MATERIALS.—Yellow brass gave evidence of weakness during the week by a drop of 1c, making the range of prices from 13c to 14c per lb. Old heavy copper was easier in price by ½c to 1c per pound, making the price paid by wholesalers 20c to 21c per pound. No. 1 busheling was down, being quoted at $16 to $17 per ton. No. 2 busheling was firmer in price, being quoted up to $12 per ton. There is a good demand for most old materials from the mills at present, but supply is scanty. Release of copper by the producers in the United States at 23½c basis was accountable for the weakness in brass and copper.

Copper Released By Producing Companies

Toronto.

INGOT METALS.—The item of greatest interest in metals during the week was the decision to release copper for domestic needs on October contracts by producers in the United States. Trade generally in ingot metals is quiet owing to the unsettled conditions that have prevailed in the markets.

COPPER.—A better feeling prevails in the copper market, due to the permission granted by the United States Government to producers, allowing them to make deliveries to customers on October contracts at 23½c basis. After the needs of the Allies are taken care of there has been a surplus available for domestic account at the established price. Locally copper was quoted down ½c at 31c per pound.

TIN.—The market is holding steady and firm in the face of a quiet demand. Prices locally ranged from 63½c to 65c per pound.

SPELTER.—There is little interest in the market for spelter, although some local concerns report a slightly better inquiry. Prices have not yet been established by the Federal Trade Commission in the United States. Quotations continued to be made in the local market at 10c per pound.

LEAD.—Lead was weaker during the week owing to the decline in price of a full cent per pound by the leading producer in the United States, otherwise known as the Trust. It was expected these interests would send the price down ½c, but it came as a surprise that the reduction should be double that amount. Since August 29 there has been a full reduction of 4c per pound in the primary market. Locally prices declined ½c, quotations being made at 10c per pound.

ANTIMONY.—Cheaper offerings were made in the primary market during the week, which injects a measure of weakness into the market. Locally prices were unchanged at 18c per pound.

ALUMINUM.—Lower prices prevailed in the primary market, but locally quotations were unchanged at 60c per pound. Demand is light.

PIG IRON.—There is no improvement in the pig iron situation, as the operation of the embargo in the United States effectually stops import into this country. Producers of pig iron in this country are affected also through the difficulty in getting raw materials from the United States. Prices in the local markets are purely nominal.

LONDON MARKETS

LONDON, Oct. 16. — Fall lines continue to be good sellers. Merchants though not speculating much at present are buying freely for their present needs. Prices continue firm with a few exceptions. Linseed oil and white lead have declined, and advances are recorded on cotton goods, table cutlery, brooms and turpentine. Other lines are firm. Collections are good, and business throughout the district is good.

Cotton Goods Advance Again

London.

COTTON GOODS.—A further advance has been made this week in prices of cotton goods, bringing new quotations to the following:

Braided awning cord, No. 3, $1.60 per doz.; No. 3½, $1.85; No. 4, $2.90; No. 4½, $3.90 per doz.

Cotton twine is 54c per lb. in 3-ply and 58c per lb. in 4-ply.

Cotton bag twine is 65c per lb. Candlewick is 55c per lb.

Seine twine prices are as follows: No. 18 and larger in 1 lbs., 63c per lb.; No. 18 and larger in ¼ lbs., 64c per lb.; No. 15 and smaller in 1 lbs., 64c per lb.; No. 15 and smaller in ¼ lbs., 65c per lb.

Braided cotton clothes lines, 50 ft., are $3.85 per doz.

Twisted cotton clothes line are $1.85 per doz. for 30 ft.; 48 ft., $2.75 per doz.; 60 ft., $3.35 per doz.

Sash cord has advanced 2c per lb. and is now 55½c per lb. for No. 6 cord; 54½c per lb. for No. 7 and 54c per lb. for No. 8 to No. 12.

Cotton rope is 51c per lb. in 3-16 in. size and 50c. per lb. in ¼ in. and larger size.

Table Cutlery; Brooms; Advance

London.

TABLE CUTLERY.—An advance of about 7½ per cent. has been made in prices of Joseph Rodgers' table cutlery this week.

Brooms

Corn house brooms have also advanced about ten per cent. in price during the week.

Coppered Rivets and Burrs

Net prices on assorted coppered rivets and burrs figured at the new discount of 15 per cent. are as follows:

No. 8 x ¼ lbs. $2.04 per 5 lb. pkg.
No. 8 x ½ lbs. $1.87 per 5 lb. pkg.
No. 10 x ½ lbs. $2.00 per 5 lb. pkg.

Nails; Rope; Sash Weights

London.

NAILS. — There has been no change this week in the price of nails. Wire nails are quoted at $5.45 base and cut nails at $5.75 base.

Rope

Rope prices are likewise unchanged at 39c per lb. base for pure manila; 33c per lb. base for British manila; 33c per lb. for New Zealand hemp and 27½c per lb. for Sisal.

Sash Weights

Solid sash weights are quoted at $3.50 per 100 lbs.

Sectional ½ lb. are $4.50 per 100 lbs.
Sectional 1 lb. are $4.25 per 100 lbs.

Spades; Shovels; Weather Strip

London.

SPADES AND SHOVELS.—Prices on spades and shovels are firm this week as follows: 1sts, 30 per cent. off; 2nds, 20/2½ per cent. off; 4th, 5 per cent. off.

Scoop Shovels

Prices on scoop shovels are as follows: Jones socket, 10 per cent. off; Jones strap, 7½ per cent. off; Wards, 7½ per cent. off; F. and W. socket, 10 per cent. off. Black cat socket net list.

Weather Strip

Wood and felt weather strip is 75 per. cent off; Swan hardwood strip is 75c per set; Frost King strip is $4.40 per doz. boxes.

Good Sale For Buck Saws; Chains

London.

BUCK SAWS.—There is a good sale for buck saws in the present market at the following prices: $8.70 per doz. for Happy Medium; $10.80 per doz. for New Century and $11.70 per doz. for Prince Rupert.

Auto Chains

Chains for automobile tires are being quoted this week at 25 per cent. off list.

Stove Pipes

Stove pipes, 6 inch bright, are $22.29 per 100 lengths; 7 inch bright are $23.55 ped 100 lengths; Elbows, 6 inch lt. pat., $2 per doz.; 7 inch lt. pat., $2.15 per doz.

Oil Heaters

Perfection No. 520 oil heaters are quoted at $3.85 each; No. 525 heaters are $3.80 each; No. 530 are $4.25 each.

Prices Steady on Miscellaneous Lines

London.

COW CHAINS.—Prices on cow chains have remained steady during the week at 12½ per cent. off list.

STALL FIXTURES, stamped steel, are priced at $1.25 per doz.

STOVE BOARDS, wood lined, are quoted at 30/10 per cent.

LANTERNS, long and short pattern, are $12 per doz.

LANTERN GLOBES, long and short pattern, are 85c per doz. in 6 doz. to case.; 90c per doz. in 3 doz. to case, and $1 doz. in 1 doz. to case.

Ash Sifters

Prices are likewise steady on ash sifters as follows: Common wood sides, $2.15 per doz.; Banner Rocker, $2.90 each; No. 1 Burrowes Rocker, $5.25 each.

SNOW SHOVELS are quoted at 12½ per cent. off list, and harvest tools are quoted at 25 per cent. off list.

Decline in Oil: Turpentine Up

London.

LINSEED OIL.—A drop of 12 cents per gallon has been recorded in the price of linseed oil this week, bringing new prices to the following:

	Raw Per Gal.	Boiled Per Gal.
1 to 2 bbls.....	$1.37	$1.40
3 to 5 bbls.....	1.36	1.39
6 to 9 bbls.....	1.34	1.37

Turpentine

An increase of 4 cents per gallon has been recorded in the price of turpentine, which is having a good sale at the present time. New prices are as follows:

Per Imp. gal.: 1 bbls. lots, 73c; 2 to 4 bbls., 72c; 5 gal. lots, 80c.

White Lead Down: Glass; Putty; Firm

London.

WHITE LEAD IN OIL.—A decline of 50 cents per 100 lbs. on white lead in oil has been made this week, bringing new prices to the following:

Tons: Pure lead, $17.50 per 100 lbs.; less, $17.80 per 100 lbs. Pure lead (Elephant Brand), $18 per 100 lbs.; less, $18.30 per 100 lbs.

Glass

Prices on glass are firm this week at previous quotations of 50 per cent. off for single and double diamond, and 40 per cent. off for cut lights.

Putty

Putty is likewise unchanged in price this week. Standard putty is $4.75 per 100 lbs., and pure putty $5.75 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, October 15.—Markets for the week are again very steady on all lines of heavy goods, but show quite a number of advances on shelf goods.

The first snowfall of the season occurred this week and has stimulated the stove trade throughout the West. Business in other lines continues very good, although it consists mostly of sorting orders.

A good deal of uncertainty exists throughout the West pending the decision of the government on the price to be fixed for Canada's wheat supply, and has resulted generally in making purchasers more conservative.

Good Demand For Hinges; Prices Firm

Winnipeg.

HINGES.—Good demand is shown on all lines of hinges with prices on all lines holding firm. To-day's quotations are are as follows: Light Tee and Strap, 10% off list. Corrugated Strap Hinges, 4 in., $1.70 doz.; 5 in., $2.10 doz.; 6 in., $2.85 doz.; 8 in., $4.60 doz.; 10 in., $7 doz.; 12 in., $10.75 doz. Corrugated Tee Hinges, 4 in., $1.90 doz.; 5 in., $2.55 doz.; 6 in., $3.25 doz.; 8 in., $5.65 doz.; 10 in., $8.75 doz.; 12 in., $12.40 doz.

Post Hole Augers

Prices on Vaughan post hole augers, although advanced by manufacturers some time ago, are just being put into force by the Winnipeg jobbers and show an increase of approximately 15%. To-day's market prices are herewith quoted: 5 in., $11 doz.; 6 in., $11.65 doz.; 7 in., $13 doz.

Galvanized Sheets Decline $1 Hundred

Winnipeg.

GALVANIZED SHEETS. — Galvanized sheets are still moving freely, with the market weaker and a decline of $1 per hundred pounds on 10¾ oz., Nos. 28, 26, 24 and 22 gauge, and with a reduction of 85c per hundred on No. 20 gauge. To-day's prices are quoted as follows:

Galvanized Sheets—Premier, Apollo or Fleur-de-lis Brands—10¾ oz., $12.50 100 lbs.; 28 ga., $12.20 100 lbs.; 26 ga., $11.80 100 lbs.; 24 ga., $11.75; 22 ga.. $11.75; 18 and 20 ga., $11.75; 16 ga., $11.60.

Black Sheets—10 ga., $11.25 100 lbs.; 12 ga., $11.25; 14 ga., $11.50; 16 ga., $11.50; 18 and 20 ga., $10.80; 22 and 24 ga., $10.85; 26 ga., $10.90; 28 ga., $11 100 lbs.

Higher Prices On Pine Tar

Winnipeg.

PINE TAR.—Owing to the excessive cost of tin cans it has been necessary to adjust prices on pine tar as follows: 1 gals., 70c. ea.; ½ gals., 40c. ea.; ¼ gals., $2.75 doz.; ⅛ gals., $1.75 doz,; 1/16 gals., $1.15 doz.

Tank Pump Leather

Tank pump leathers show a small advance of 20c per dozen, the former price having been in force for some considerable period. Price quoted to-day on 5 in. is $4 doz.

Bench Screws And Latches Advance

Winnipeg.

IRON BENCH SCREWS. — Further advances amounting to about 15% have just been issued on iron bench screws, making to-day's prices on 1 in., $10.50 doz.; 1⅛ in., $12.60 doz.; 1¼ in., $14.75 doz.

Latches

Another small advance has been necessary on thumb latches and barn door latches which show an increase of approximately 5%. Prices quoted are as follows: Thumb latches, steel, No. 2, $2 doz.; No. 3, $2.70 doz.; No. 4, $4.75 doz. Barn door latches, No. 5, $2.70 doz.; No. 8, $2.90 doz.; No. 9, $4.10 doz.

Good Demand For Wrought Iron Pipe

Winnipeg.

WROUGHT IRON PIPE.—The market still continues very firm on wrought iron pipe with good demand. Some manufacturers predict a shortage of this commodity which, no doubt, would necessitate revisions in prices. In the meantime prices remain as before.

Black—¼ in., $6.08 100 ft.; ⅜ in., $6.16; ½ in., $7.83; ¾ in., $9.95; 1 in., $14.67; 1¼ in., $19.88; 1½ in., $23.76; 2 in., $32.04; 2½ in., $51.30; 3 in., $67.05.

Galvanized—¼ in., $8.42 100 ft.; ⅜ in., $8.50; ½ in., $9.63; ¾ in., $12.38; 1 in., $18.27; 1¼ in., $24.75; 1½ in., $29.57; 2 in., $39.78; 2½ in., $63.59; 3 in., $83.16.

Bolts Are Firm; Carriage Heaters

Winnipeg.

BOLTS.—The demand for all kinds of bolts continues favorable with the markets firm. To-day's prevailing prices are as follows:

Carriage, ⅜ and smaller, 5%; 7-16 and larger, 5% on list; machine, ⅜ and smaller, 5%; 7-16 and larger, 5%; plow bolts, 5% on list; stove bolts, 50%; shaft bolts, 5% on list; tire bolts, 25%; sleigh shoe bolts, ⅜ and smaller, 5% on list; 7-16 and larger, 5% on list.

Carriage Heaters

The demand for carriage heaters and coal continues good with prices remaining firm but further advances are expected. To-day's market prices are as follows: Heaters, 3D, $2.45 ea.; 5B, $1.75 ea.; 7C, $2.20 ea.; 7D, $2.65 ea. Coal, Clark's, 90c doz.; ABC, 70c doz.; Bricklets, 75c carton.

Advance Expected On Linseed Oil

Winnipeg.

LINSEED OIL. — Linseed oil prices continue to hold steady and are quoted as follows: Raw, $1.57 gal.; boiled, $1.60 gal. However, these prices are not expected to hold for long as U.S. markets report that their flax crop is away short of expectations, and as soon as exports commence advance may be looked for.

Turpentine

Turpentine, which declined 10c per gal. last week, shows no change and is quoted as follows: Bbls., 75c gal.; ½ bbls., 78c gal.; 5 gals., 80c gal.; 1 gals., 80c gal., plus the usual charge for containers.

CHANGE IN CANADIAN METAL TARIFF

Notice has been given that metal manufactures of the kinds named below are now produced in Canada, and similar goods imported into Canada will therefore be subject to the regulations against dumping. The anti-dumping provisions of the Canadian customs tariff of 1907, section 6, apply only to "articles exported to Canada of a class or kind made or produced in Canada." The metals listed in the bulletin are the following:

Yellow or Muntz metal in sheets of widths up to and including 36 inches wide and in bars or rods of diameter up to and including 5 inches.

Nickel silver and German silver in strips and sheets.

Tobin bronze in bars or rods as used for the manufacture of gas buoys, etc.

The second and third items of the list above are free of ordinary duty; yellow metal for use in ship construction or repairs is duty free, but when intended for other uses is dutiable. The war tax of 1915 applies to all the metals named without regard to their use. It is assumed that this tax is not regarded as "ordinary duty," and that no exemption will be allowed for the difference between fair market value and selling price to the importer in Canada except in the case of yellow metal not intended for ship construction.

In accordance with the regulations of September, 1914, the dumping duty is applicable in all cases when the difference between the fair market value and the selling price of the goods to the importer in Canada exceeds 5 per cent. of the fair market value. The dumping duty applies, without exemption allowance, to articles of a class or kind made in Canada when admitted free of ordinary duty.

JAPANESE IRON OUTPUT

The present total output of iron from Japanese foundries falls short of 1,000,000 tons, but it is expected that in two years it will increase to about 2,000,000 tons. It is then thought that the domestic demand for steel will be adequately met by the home product. At present, however, the steel available for general shipbuilding purposes amounts to not more than 50,000 tons. On account of the present condition of the industry it is impossible for Japan to meet her shipbuilding requirements by the home output, and she must rely upon imports to a very great extent.

CANADA BUYING MORE FROM UNITED STATES

Canada is now buying from the United States at the rate of $26,500,000 a month more than last year. The detailed figures of the foreign trade of the United States for the fiscal year ending June 30 show an increase of $319,000,000 in the total of Canada's purchases in that country as compared with 1915-16.

Washington's details of American trade for the twelve months ending June 30 show Canada as the third largest purchaser of goods in the United States, and offer substantial reasons why Canada's occasional applications for credit arrangement merit favorable consideration. Great Britain again led, with a total of upwards of two billions, and France was second with upwards of a billion. But at upwards of three-quarters of a billion dollars, Canada's total was $360,000,000 ahead of the country fourth in the list—namely, Russia-in-Europe.

WEEKLY PAINT DEPARTMENT

Refinishing the Auto

Auto Owner Does Not Forget Stored Car—Big Field Opening for Paint Sales to Auto Owners—Selling Complete Outfits—Keep Farmers Busy Painting This Winter—Useful Pointers for the User.

WITH the approach of colder weather, there are many auto owners who will be putting their cars away until spring. However, it will be found that these owners do not forget about their cars and will want to be doing odd little repair jobs all the time. This means a sale of auto accessories all the year round and there is one line which should come in for a big turnover from now until the green fields of another spring welcome the motorist. This line is paint.

Big Field Opening For Paint Sales To Auto Owners

There are very few cars which have been driven all summer but will need something in the line of painting. If the body does not need re-finishing, the wheels will—the top should be renewed or the lamps brightened up. And there are individual finishes for each part of the car or there are complete re-finishing outfits which eliminate the carrying of extra lines.

Selling Complete Outfits For An Auto

Manufacturers claim for the re-finishing outfits that very satisfactory results can be secured even from the amateur, if directions are carefully followed. This line would seem to possess merit from the retailer's standpoint as well in that the farm-owned auto will not come to the paint shop to be decorated. This then presents an opportunity for the retailer to push for this trade aggressively and there is no doubt but that the line can be kept active.

Keep Farmers Busy Painting This Winter

The farmer is as anxious to have his car dressed up nicely as the town man and will have an opportunity during the winter months to look after his car. It should be advisable for the retailer to keep this line actively before his customers both by window displays and newspaper advertising.

Useful Pointers For the User

An instruction card issued by one of the large paint companies in connection with an Auto Re-finishing Outfit which they market contains some splendid pointers, which it would be well for the retailer to pass along to his customers. Some of the main features they bring out are reproduced herewith:

Read Directions Through Before Starting To Work

First of all be absolutely sure that your car is thoroughly clean. Remove all mud, dust, grease and oil. After you have thoroughly washed your car, it is a good idea to go over the surface with a rag moistened with benzine or gasoline.

Sandpaper all the surface lightly, sandpapering thoroughly the rough places so that the repainted surface may be even. After sandpapering, dust the surface so that no loose particles adhere.

You now have your surface in proper condition for refinishing. When applying the enamel to your car see that it is not standing in a dust-filled room. Keep the windows shut so that there is no draught to stir up the dust and deposit it on the fresh surface. See that the temperature is even and sufficiently high to allow the enamel to flow out evenly and dry properly: from 70° F. to 80° F. is best. You cannot do a good job in a cold, draughty, or damp room or shed.

Apply one coat of enamel, first of all thoroughly stirring the material. Do not attempt to apply too heavy a coat: brush it out fairly well, at the same time avoid spreading it too thin. Allow the coat to dry a full twenty-four hours. Enamel is used on wheels, gears, etc., as well as body and fenders.

When the enamel is thoroughly dry, rub down with powdered pumice stone and water, with a piece of rubbing felt, to slightly cut or reduce the gloss. Then remove all trace of pumice by washing off with water and sponge, and dry off with chamois. Next apply a finishing coat of varnish, flowing it on carefully and evenly. Don't overlook to brighten up the dashboard woodwork, battery box and other woodwork with a coat of the varnish. Before using the car allow the varnish to dry for at least two days, then wash down with cold water and wipe with chamois, to prevent mud staining.

Special preparations are included for finishing the lamps, horn and other metal trimmings as well as for renewing the finish on the hood and side curtains.

Retailers generally are pushing the sale of all auto accessories energetically and the painting end of the business will undoubtedly come in for big share of this pushing. The rapid increase in the number of cars being used will undoubtedly result in increased sales for painting outfits and this would seem to be an auspicious time to start this trade moving quickly.

A MAN OF MANY SIDES IS BRITISH FOOD CONTROLLER

(Continued from page 63.)

a weary round of interviews with deputations and experts he plunges into a mass of statistics at home in a small room on the ground floor of his London residence. He has a passion for figures as well as for farming. He worked out in his own somewhat crabbed hand the calculations upon which are based the rationing system that goes into effect in Great Britain this very month. His main objects, as stated in the London *Spectator*, are to conserve supplies, to distribute them equally between rich and poor and to keep prices down. He works through local food committees and has arranged to extend his system to bread and meat. His scheme for feeding his countrymen goes into full effect by the end of December.

OUT OF IT.

"What are y' doin' now, Bill?"

Bill (proudly)—"I'm at Corps Headquarters now—a servant to the general."

"Oh, I see. You are a sort of a non-combatman."

A Bulls Eye That Counts

The moment you decide to handle **Jamieson's Pure Prepared Paints** exclusively you make a bull's-eye that counts in dollars and cents in your favor.

Handle our paints and varnishes and new business will come your way and stay your way.

Jamieson's line gives the consumer good value for his money, with good profit for the dealer.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 17.—Business in the main lines of supplies for the paint trade continues satisfactory. The present week has been marked by an absence of feature or change in quotations, turpentine being the principal item affected towards greater firmness. In mixed paints there is no change, but brisk general demand. While lead in oil and putty are also unaltered and to date no hint has been given of forthcoming change in these products. Linseed oil is still in uncertain mood due to the many factors affecting its market, factors which were mentioned last week. The general tone in linseed oil is strong for spot stock, slightly weaker for futures, and subject to changes. There are still some firms not in the market to sell linseed oil. Glass is unchanged following last week's announcements, and is in continued firm market.

Future Linseed Easy; Spot Oil Steady

Montreal.

LINSEED OIL.—Flaxseed in the North-west has been on the decline owing to the optimistic report of the Government as to new crop, the feature of decline being usual at this season. As a result linseed oil futures are easier The condition, however, does not apply to spot linseed oil. This market continues firm, and the tendency to hold on to spot stocks is still very marked, some firms are not quoting for immediate delivery at all. The problem of transportation bulks considerably in the question of future supplies of linseed oil, and is by no means reassuring. Water transportation is to be under Government control now, and foodstuffs (wheat and oats) will probably have preference in securing space on lake ships. Rail conditions threaten difficulty. Already it is hard to get cars. At this time last year cars were not hard to secure. The outlook is to firmness even though the future market has fluctuated towards easier figures for the time. There was a reversion to firmer, it may be noted, even in the future market at the beginning of the week, and this tendency may recur. Quotations to the retail trade are still as mentioned last week viz:

Linseed oil	Raw	Per Imp. Gal. Boiled
1 to 4 bbls.	$1.40-$1.46	$1.42½-$1.49
5 to 9 bbls.	1.39- 1.45	1.41½- 1.48

Turpentine Firmer Supplies Uncertain

Montreal.

TURPENTINE.—As pointed out in HARDWARE AND METAL last week, turpentine is in firm market, and the advances predicted as likely to take place have come into effect with prospects of being maintained. The primary market tone has been consistently firm, and the matter of securing supplies delivered in Montreal is one of increasing concern as railway problems become more intensified with the advance of the year. There may be a recurrence of the condition of real shortage in turpentine as the winter goes on but efforts are being made to lay in sufficient stocks to avoid this. Quotations are altered upwards for the present week as follows:

Turpentine	Per Imp.Gal.
1 to 5 bbls.	$0.70-$0.75
6 to 9 bbls.	0.64- 0.68

OFFICERS ELECTED AT CHICAGO CONVENTION

At the annual convention of the National Paint, Oil and Varnish Association held at Chicago last week, the following officers were elected for 1918:—

President, George C. Morton, Treasurer and General Manager of the Carpenter-Morton Co., Boston.

First Vice-President, Howard Elting of Chicago.

Second Vice-President, R. B. Robinett of Cleveland.

Third Vice-President, Richard Moore of St. Louis.

Treasurer, H. S. Chatfield of New York City.

Secretary, George Horgan of New York City.

It was voted to hold the National Convention for 1918 in Boston, Mass.

White Lead In Oil Steady This Week

Montreal.

WHITE LEAD IN OIL.—The reduction in this product of the past week has not produced any marked effect, demand for white lead in oil being more or less hand-to-mouth while the present uncertainty exists as to its trend. There have been views amongst market experts to the effect that white lead in oil cannot continue to weaken in market, and may revert to greater strength before long. But views are also held that this product has been high enough for long enough, and that more demand should exist when the consumers satisfy themselves that the bottom of the decline has been reached. Meanwhile the market for ingot lead is weaker. White lead in oil quotations are still for 5 ton lots $17 per 100 lbs.; for 1 ton lots, $17.30 per 100 lbs.; and for less than tons, $17.60 per 100 lbs.

Market For Putty Remains Unchanged

Montreal.

PUTTY.—The market for putty is steady this week, and there are no indications at date that any alteration is anticipated. Supplies of whiting are sufficient to take care of manufacturers' needs with demand for some distance into the future in view, and the market for linseed oil while uncertain has elements of weakness. The matter of containers for putty is still one for serious concern and may occasion advances yet as the year goes on, but in the meantime quotations are still as last week, viz.: Standard putty bulk in barrels 5 ton lots, per 100 lbs. $3.25; 1 ton lots per 100 lbs. $3.40; less than tons per 100 lbs. $3.60.

Mixed Paints In Steady Market

Montreal.

MIXED PAINTS.—There is no change in the market for ready prepared paints this week, and manufacturers do not indicate any tendency to firmer prices as yet, though there is a consensus of opinion in favor of steadily maintained prices for all spring trade requirements. Demand is good, orders for spring supplies being already noted. Domestic lines have had a good share of demand with out-of-doors paints, and marine paints are being required as the shipbuilding industry develops more. Cost of containers is a factor of firmness in the mixed paint lines at present even more than formerly.

WHITE LEAD

TORONTO

TORONTO, October 18.—Some interesting developments have taken place in commodities bearing on the paint trade. Chief among these have been the decline in linseed oil, the advance in turpentine and the weaker tone in the market for pig lead. In the latter market a decline of 1c per pound was registered by the leading producer in the United States, otherwise known as the Trust, which makes a total decline of 4c per pound on pig lead since August 29. In view of this situation white lead in oil can again be considered as in weaker market tone. In some quarters spring booking on paint is reported very good. Sorting business is also reported seasonably good.

Linseed Oil Down 6c To 8c Gallon

Toronto.

LINSEED OIL.—A decided movement towards lower levels was manifested in the linseed oil situation during the week when the lower range of quotations was reduced 6c and the higher range 8c per gallon, making the range at the time of writing $1.36 to $1.41 in single barrel lots for raw oil. There was a lower swing to the flaxseed market during the week but at the close of the market on Wednesday an upward tendency started which continued Thursday morning. On Wednesday of last week October flaxseed at Winnipeg was quoted at $2.92½ and on Wednesday of the present week it was quoted at $2.93½. On Thursday, however, it reached as low as $2.89. December flaxseed showed a corresponding tendency and on Wednesday of the present week was quoted at $2.79½ per bushel. Lower quotations on future oil for November and December delivery were lower than the prices given. There is a fair demand for oil and oil cake is finding a ready market at good prices. Oil men are slow to express an opinion as to the probable trend of the market. They are frank to confess that they are unable to see the possible fluctuations that may take place. Good crop reports were an influence toward lower flaxseed, but whether this will be long-sustained remains to be seen.

	Raw, per 9 lbs.	Boiled, per 9 lbs.
1 to 2 bbls.	$1.36-$1.41	$1.39-$1.44
3 to 5 bbls.	1.35- 1.40	1.38- 1.43
6 to 9 bbls.	1.33- 1.38	1.36- 1.41

Turpentine Prices Move Higher Still

Toronto.

TURPENTINE.—Due to the firmer situation in the primary market where prices were on the upgrade during the week, an advance of 2c having been recorded in that quarter, the local market was in stronger tone and prices advanced 4c per gallon. At the time of writing (Thursday morning) the range of quotations was from 70c to 73c per gallon in single barrels, but intimations were made that another advance of 2c per gallon would be put into effect on Friday in some quarters, which would make the range from 70c to 75c per gallon. There is active buying in the primary markets at the present time for the purpose of speculation and this is having a bullish effect on the situation. There is expectation in some exporting circles that the war will be over by springtime, in which event export will be possible and prices will in that event be higher. Buying has been going on for this reason. Locally demand is somewhat light and arrival of shipments is not as good as dealers would like to see them.

	Imp. gal.
1 barrel	$0.70-$0.75
2 to 4 barre's	0.69- 0.74
5 gallon lots	0.78- 0.83

White Lead In Oil In Weaker Market

Toronto.

WHITE LEAD IN OIL.—There is a weaker tone in the market for white lead in oil following decline noted last week of 50c per hundred pounds. The influence at work is the decline in pig lead which was down 1c per pound by the leading producer in the United States. In the New York market the price is down to $7 per hundred pounds with offers being made to sell November and December shipment at $6.87½. The whole sentiment in the pig lead market is bearish, the report that the Government's investigation of production costs will lead to the establishment of prices at $6 per hundred is stated to be within the bounds of possibility. In view of this situation in pig lead the market for white lead in oil is weak and lower prices would not come as a surprise. Quotations are made on the basis of $17.50 in ton lots for standard and $17.80 in less than ton lots.

Weaker Undertone To Paint Products

Toronto.

MIXED PAINTS.—Due to the recent declines in white lead in oil and also to the fact that pig lead seems headed to lower levels, with the possibility of further declines in white lead in oil, there is a weaker undertone to the market for paint products. Whether this will develop to the stage that actual declines will be recorded in paint remains to be seen. A significant factor that has some bearing on the situation is that linseed oil for future delivery is being quoted considerably below spot prices. There has been some booking of spring business on paint and sorting orders are reported fairly good.

Glass Discounts Have Been Withdrawn

Toronto.

GLASS.—In at least two instances firm quotations of 50 per cent. off list for window glass have been withdrawn. Dealers in these particular instances state they are quoting only when they see the specifications. In some instances they continue to quote at 50 per cent. off list, but in other cases higher quotations are made. A further advance of 12½ per cent. has been announced by American manufacturers of date October 10, while the boxing charges have been increased by the manufacturers 100 per cent. In view of these conditions the local glass market is in a very firm position. Demand is somewhat light.

Putty remains unchanged at prices given in current quotations.

RESEARCH WORK IN BRITAIN

J. E. Ray, Dominion Trade Commissioner in Great Britain, reports that important work is being done by the British Advisory Council for Scientific and Industrial Research. He states that progress has been made in the production of a marketable hard porcelain from purely British material, also in discoveries in respect to high-speed steel, which have proved of great value to the Admiralty.

WHAT OTHER PAPERS SAY.

(Continued from page 64)

head the very serious question as to where the advance in prices would stop. Already, before the Government took a hand in the game, the end of unduly high prices in most lines of metals was clearly in sight. Not only were high prices limiting demand, but the enormous productive capacity of the country was beginning to tell. It was easier to get most goods than formerly, so scarcity, the great incentive to further advances, was beginning to be lacking.

In ordinary times, such a change in prices as the Governmental action precipitated would have given business a severe jolt. But these are extraordinary times, and we have grown used to shocks. So a brief period of indecision and waiting was about all that happened, and then matters went on, only at a somewhat slower pace, for the element of speculation is practically removed. Also there is a feeling that it is safe to buy for one's wants on the basis of Government figures from now on, at least until the end of the year.

It must also be remembered that so-called market prices often did not represent anything more than premiums paid for prompt deliveries, and that most goods were bought at lower figures. What will probably happen is that the general market will gradually settle down to the basis at which most purchases were placed. There seems to be no likelihood of any changes in the prices of seasonable spring and summer goods. Manufacturers of such lines long ago contracted for material and supplies at prices prevailing at such time, and naturally cannot make any reductions in prices now, especially as the wages of labor will not be reduced. The way for the dealer to meet that situation is to carry over as few as possible of these seasonable goods beyond next season, and thus suffer as little as possible from those declines which will probably occur at the beginning of the season that follows next summer.

The real crux of the situation is that consumers are still buying freely, because there is much prosperity in the agricultural sections because of large crops at remunerative prices, and also in the industrial centres because of high wages and much employment. So long as these conditions continue, and they promise to last out this year, the resulting demand will be a sustainer of prices and a preventative of any demoralizing. Possibly later on there will be felt the heavy burden of war taxes, and economies may greatly result. Just now, however, we are not crossing bridges until we come to them, and it is well that it is not so.

Luxeberry WHITE ENAMEL

Varnish buyers are realizing more and more that labor is the biggest item of cost in finishing operations, and that true economy suggests the use of Finishes of unquestionable quality in view of the present high cost of labor.

Liquid Granite Floor Varnish, Luxeberry Enamels (white, ivory and three shades of grey); Luxeberry Wood Finishes and Luxeberry Wall Finishes are among the celebrated "Berry" products that produce a lasting finish and cost no more to apply than the kind that wears off in a few months. The difference in the price per gallon is trifling, and the recognized quality of Berry Finishes makes them easy to sell.

The Profitable Line of Paint Products

The Paint Line with a generous profit for you—a better profit than paint yields the dealer, as a rule—is

CROWN DIAMOND PAINT

The reasons are these---

The manufacturers of Crown Diamond Paints are also manufacturers and direct importers of heavy chemicals, tanners' supplies and dyestuffs.

They manufacture their own dry colors.

They maintain **ONE** staff of salesmen for Crown Diamond Paints, aniline dyes, tanner's supplies and chemicals — overhead cut in **FOUR**!

The big result is that Crown Diamond Paints permit you to make a more generous profit than you ordinarily would. This is worthy of serious consideration, with costs of doing business steadily rising.

Crown Diamond Paints will move off your shelves like snow under Spring suns, because **YOU** will have a **BIG, PERSONAL INTEREST** in moving them in the shape of **LARGER PROFITS** on a standard, proven Paint.

The selling aids and advertising supplied to Crown Diamond Agents are the kind you will appreciate—they are planned from your viewpoint. Write **NOW** and we will gladly send you full information regarding the Crown Diamond Agency Plan.

Do you receive the **CROWN DIAMOND MARKET REPORT?** If not, send in your name and we will see that it is mailed you regularly—it's **FREE**.

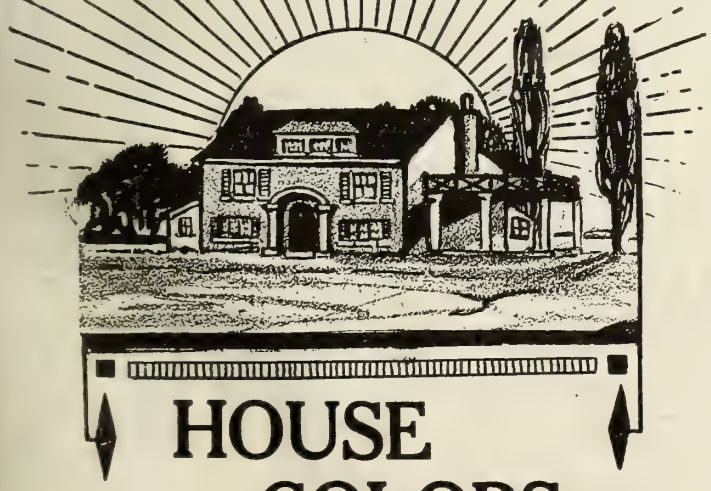
MOORE'S



HOUSE COLORS

Every year our sales show a remarkable increase.

We are constantly receiving big repeat orders and many new customers.

The high quality of these pure linseed oil paints, plus their reasonable price, make a very popular value.

Moore agents "swear by" Moore's House Colors—never at them.

It places you under no obligation whatsoever to ask for full details of our agency proposition.

It will pay you to write us now.

Moore's House Colors pay a big profit.

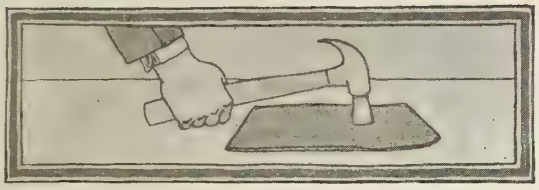
TEST IT WITH A HAMMER

"You may dent the wood but the varnish won't crack."

"61" FLOOR VARNISH

Hammer a Sheet of Rubber And What Happens?



NOTHING—your hammer leaves no impression—why? Because rubber is *elastic*. And it is the elasticity of "61" Floor Varnish that makes its life so long. Send for a sample panel. Test it yourself. Examine the dented wood and the unbroken varnish film. Then think of the heel-blows that your floor is called upon to endure, and you will understand why "*the varnish that can stand your hammer can best endure your heel.*"

Hammer a Sheet of Glass And What Happens?

WRECKAGE—the glass is shivered into a thousand pieces—why? Because glass is *brittle*. And this in a lesser degree, is exactly what happens to countless floors finished with ordinary varnishes which crack, check and chip off. A good varnish doesn't break off—it wears off—*slowly*; but the costly oils and gums used in "61" preserve its toughness far longer than the cheap ingredients used in ordinary varnishes.

A TEST THAT SELLS THE GOODS

THIS fall we are showing the magazine readers of America that the vital characteristic of a floor varnish is *durability*. This is being done with a smashing, convincing illustration (here shown) repeated eighteen million times in the great national magazines, and echoed by means of signs, booklets, streamers, movie slides and newspaper electros which will be furnished every dealer who handles Pratt & Lambert Varnish Products. It's not too late for you to get in on this big campaign.

As a merchant, you know how difficult it is to *prove* durability to a customer. You may say, "this is a durable varnish"—but that's a general claim that anyone can make. Think of having a durability argument that is not only logical, but capable of being *demonstrated!* Then take that argument, and lay the bare, unassailable facts of it before the public in a powerful campaign of national magazine advertising, and what is the result? *Conviction*—your prospect comes into your store absolutely convinced that if "61" Floor Varnish will stand the hammer test, it is obviously the varnish he wants. You *might* find it possible to sell that man a substitute—but you need no lengthy arguments to prove to you how much easier it is to sell him what he wants.

WINNIPEG MANITOBA

The Best Share for Every Plow

CRESCENT FORGE & SHOVEL CO. TRUE FIT TRADE MARK HAVANA, ILL. U.S.A.

CRESCENT PLOWSHARES

Fit Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge.

Made in Over 1000 Patterns

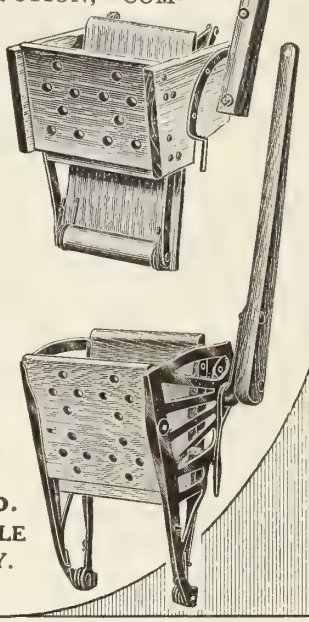
"White"
MOP WRINGERS

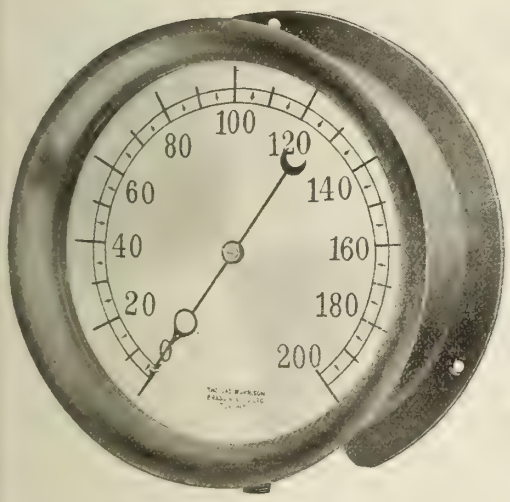
EASE OF OPERATION, THEIR GREAT UTILITY AND THEIR SUBSTANTIAL CONSTRUCTION, COMBINED WITH THEIR PRICE, MAKES THE WHITE MOP WRINGER A RAPID SELLER.

Made of malleable iron and the best of hard woods — Maple or Birch. Fits any kind of pail and wrings the mop thoroughly.

It has more than one use—often used for fruit and vegetable presses and works perfectly. The advent of the White Mop Wringer proved a boon to the housewife—it sells itself and is a good profit-maker.



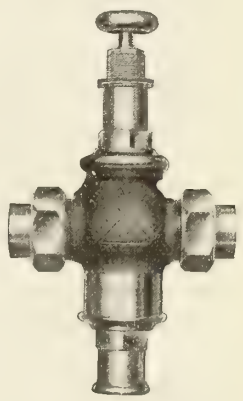
White Mop Wringer Co.
FULTONVILLE
N.Y.



Morrison Improved Steam Gauges

for steam, water, air, ammonia, etc., are instruments of the very highest quality and utmost reliability, and are sold under a full guarantee of satisfaction. Approved by Provincial Boiler and Steamboat Inspection Departments.

J.M.T. Pressure Reducing Valve



will not equalize, is extremely sensitive and will maintain a steady, reduced pressure, regardless of the variation of the initial pressure.

J.M.T. reducing valves can be supplied to suit every requirement.

CROWBARS

No. 102-A—CHISEL POINT

We offer you bars made of High Carbon Steel at the same price as you are buying the Mild Steel Bar elsewhere. Send us a trial order.

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREAL

TARRED FELT

SPECIFY DOMINION BRAND

J. H. McCOMB, LIMITED

Manufacturers of all kinds of Building Paper, Pitch and Coal Tar

MONTREAL

THE PROGRESSIVE MANUFACTURING CO.

Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

COLONIAL WIRE MFG. CO., LIMITED

WORKS: LACHINE CANAL, MONTREAL

MANUFACTURERS OF

SMOOTH STEEL WIRES—Bright, annealed, oiled and annealed.

Tinned Mattress Wire, Broom Wire, Fine Wires—Plain and Galvanized.

Yes! it does pay to sell "DELTA" FILES

Dealers find that the co-operation we give them makes files sales easy and helps to bring new business to their stores.

DELTA FILES once sold to a customer establish a permanent good-will—the Extra Durability and Lasting Cutting Edge of these files prove of great advantage to the user, cutting down file expenses.

The dealer who sells his customers *Delta Files* establishes a good-will toward his store that brings the customer back for other articles. Thus do these files help to establish pleasing relationship between the dealer and his customers.

Let us send you full particulars of our agency proposition and our co-operative helps.

Escaped from Germany

AN escaped prisoner tells the story of his fearful experiences in Germany in MACLEAN'S MAGAZINE for November; and gives a vivid picture of conditions in Germany as he saw them. He got out by way of Holland after appalling perils and hardships. In Holland, he was photographed, but so altered was he that his wife quite failed to recognize him in this photograph. Read this story of this Canadian soldier's escape. It is gripping stuff—a rare tale.

Canadian Finances After the War

WILL business in Canada collapse when peace comes? It may. What do the big men say? What do they know? What do you think? Are your opinions well informed? The subject is of the greatest possible importance, and you will get light and leading by reading the contribution of Col. John Bayne Maclean, who has taken the trouble to get the opinion of the biggest and most highly placed men in Canada to help him prepare his article.

Back from the Arctic

WILLIAM THOMPSON, representing the American Geographical Society, was this year in the Arctic Regions. He went to the delta of the Mackenzie River, and took many excellent pictures of the country and its Eskimo inhabitants. He makes the November MACLEAN'S the vehicle of many of his pictures and for an account of his journey. Read what this Arctic scientist has to tell us about a remote part of our land.

Slackers and Conscription

WHAT is your attitude towards the draft? You have positive opinions, of course. How do they square with Miss Laut's as they are expressed in her ringing article on Slackers in the November MACLEAN'S?

The Nation's Business

THIS is a new feature—a fearless, well-informed survey of national affairs. What we all want is an outspoken—but not vindictive—and clear-visioned presentation of factors and facts affecting our national, political and economic welfare.

Sketches of Trench Life

By Gunner McRitchie

MCRITCHIE was a cartoonist on a Western Canada daily before he went overseas. He has done a number of sketches of trench life "On the Spot," and these he has sent home, for publication in MACLEAN'S MAGAZINE. They're interesting and good.

The Late Sir Mortimer Clark

BEFORE he died, a few weeks ago, the late Sir Mortimer Clark, eminent jurist and an ex-Lieutenant-Governor of Ontario, wrote for MACLEAN'S an article on "Safeguarding Your Heirs." It has to do with the functions, service and safety of Trust Companies as executors of estates. This article by a man so distinguished, so cautious, so able, and so wise a counsellor, can be of first-rate value to every man perplexed with the problem of how his estate can be safely and prudently administered after he, the testator, has passed from this life.

A Complete Novelette

By Peter B. Kyne

HIS story in the November MACLEAN'S is a thunderingly good story of lumbermen and lumbering. Red blood is in this tale of business. R. M. Brinkerhoff illustrates it.

Short Story

By Ethel Watts Mumford

THE writer of this short story—the first of a delightful series by this author to appear in MACLEAN'S—is very well known among short story writers. Delicate fancy, wholesomeness, freshness and finished workmanship characterize all her work.

Short Story

By W. A. Fraser

A MIGHTILY well-written story of India—the kind that we all delight in; tense, bewildering, and lots of action. Fraser never wrote a better short story than this. Ben Ward illustrates it.

Hendryx and Oppenheim

SERIALISTS

"THE Gun Brand," by Hendryx, comes to an end in the November issue. Oppenheim's greatest story, "The Pawns Count," is continued. Oppenheim's story is the biggest single feature ever secured by MACLEAN'S.

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because—

It is exceptionally convenient, quick-acting and an oil saver.

Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted, as the flow of oil stops the instant the pressure on the plunger stops.

A sure good sale and splendid profit. Order it now.

HOYT METALS

MEMO
OCT. 20th

for your Babbitt Metal file

Selecting Raw Materials

Of paramount importance in the manufacture of metal alloys is the selection of the raw materials used.

This has always been a Hoyt strong point.

Our splendid buying connections gives us the world to select from and enables us to not only select the best, but to get the best possible price.

What this means to you as a user or seller of Hoyt metals cannot be over-estimated. It means, to say the least—right goods at right prices—alloys that stand the test.

HOYT METAL CO., Toronto

NEW YORK, N.Y. LONDON, ENG. ST. LOUIS, MO.

Wanted

SITUATIONS VACANT

WANTED—HARDWARE MAN FOR RETAIL only; must be fair salesman and window dresser. Ambitious beginner with couple years' experience would do. Box 496, Hardware and Metal.

WANTED — HARDWARE CLERK, 4 TO 5 years' experience anyway; salary $20.00 per week; must furnish references; married man preferred. Box 493, Hardware and Metal.

FOR SALE

HARDWARE, BOOT AND SHOE BUSINESS for sale—clean stock, good surrounding country; doing good business; good reasons for owner retiring from business. Robert Neilly, Bradford, Ont.

POSITION WANTED

POSITION WANTED AS MANAGER OF RETAIL hardware store or travelling salesmen. Alberta or British Columbia preferred. Address Box 495, Hardware and Metal, Toronto or Winnipeg.

WANTED

WANTED TO BUY—GOOD, LIVE ONTARIO hardware business, or would take interest in live business and assume management if owner wished to retire from active duties. Address Box 494, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

The next time you want a clerk, be sure to advertise in the "Wanted" Page of HARDWARE AND METAL. You will receive inquiries from the livest clerks in the Canadian hardware trade, because reading HARDWARE AND METAL is a test of the clerk's interest in his business.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

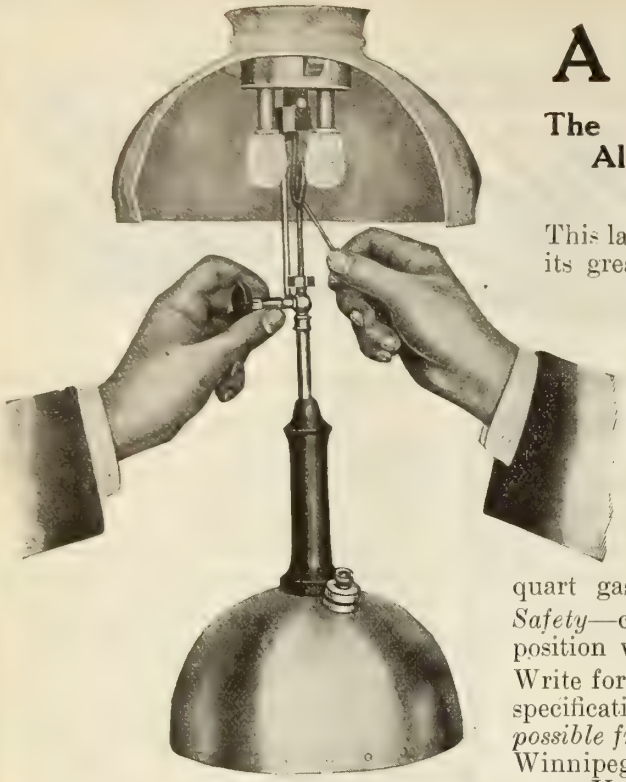
THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!



Here is how it is lighted

The Lamp that threw the Alcohol Torch into the discard.

This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power.

Safety—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton or Vancouver and cover yourself for Fall and Winter requirements.

Here is the No. 119 Lamp

POWERLIGHT CO., 52 Gertie Street, Winnipeg

UNIVERSAL

In Ye Old Days

a fire-place was absolutely requisite to a piping hot cup of coffee. To-day this luxury may be enjoyed in any place or clime by simply unscrewing the cover of a Universal Vacuum Bottle.

Universal bottles may be obtained with three nested cups in cover, making four in all.

The filler is sustained by a spring steel shock absorber which reduces breakage to a minimum.

Actual tests have proven that Universal bottles have the greatest temperature-retaining efficiency.

Demonstrate these wonderful qualities,—show off the beauty of the design and finish —sell more Universal bottles. By so doing you will make more customers and more money.

To insure delivery before Christmas we urge that you order at the earliest possible moment.

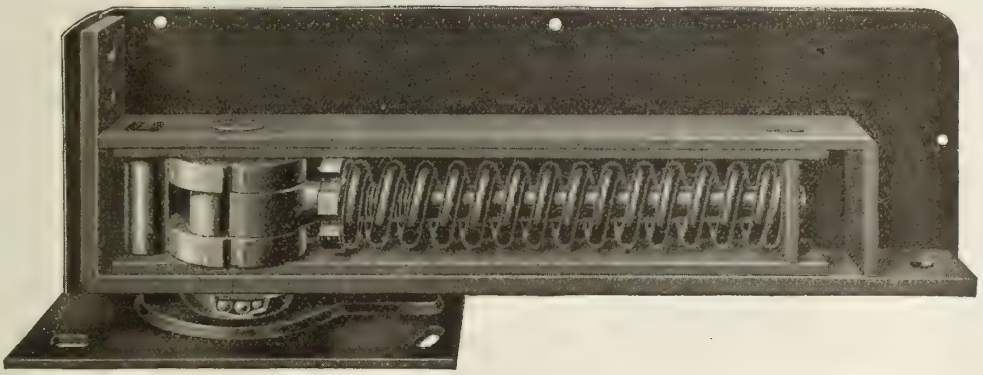
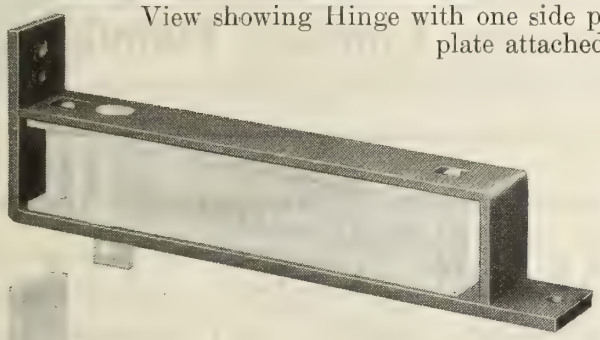
STERLING, ILLINOIS

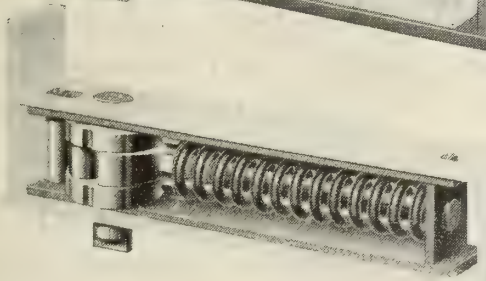
No. 240 Ball-Bearing Floor Hinge



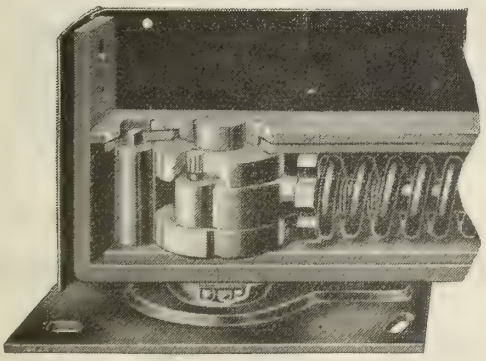
View showing Hinge with one side plate, back plate and floor plate attached.



Dark part carries the weight of the door independent of the spring closing feature.



Dark part shows the spring closing feature independent of the part which bears the weight of the door.



View with parts broken away to show roller bearings and the pin which stands the wear and tear.

If interested, tear out this page and keep with letters to be answered.

The "Hatch Garage Door Outfit"

Makes the most used part of the garage a constant source of pleasure instead of annoyance.

The smooth sliding rollers hold the doors in place, takes the bind off the hinges, and the doors open and close with exceptional ease.

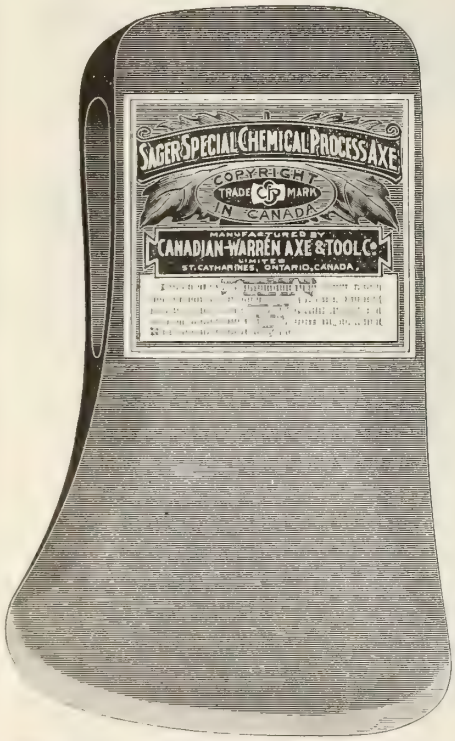
The single hinged door allows access to the garage without disturbing the other two.

No trouble with snow or **ice,** they in no way interfere with its working.

Don't wait. Be the first in your territory to show this outfit. There's a substantial profit in every sale.

Swing in to-day, write our Hanger Department for sales helps and Hanger Service.

Canada Steel Goods Company, Limited, Hamilton, Ont.



SAGER AXES in patterns suitable for every requirement. Used in every province in the Dominion. *The Axe for Discriminating Buyers.*

The Success of Canada's Victory Loan will Provide your Customers with Money to Spend

GREAT BRITAIN cannot continue to buy the agricultural and manufactured products of Canada unless Canada is prepared to grant credit to Britain.

And if Great Britain were compelled, through the lack of this credit, to buy in some other producing country, where she COULD get credit, think of the effect it would have upon YOUR CUSTOMERS.

The farmers would lose their best market for live-stock, grain, cheese and other products; miners would have to work short shifts; workers in manufacturing industries of every kind would have their wages reduced, and many would be thrown out of employment.

You would have to face IMPOVERISHED CUSTOMERS with your shelves loaded with merchandise bought at above normal prices.

For the great business prosperity of Canada is very largely due to the millions upon millions of dollars expended in Canada by Great Britain.

And, as Great Britain requires credit so that she may continue to buy, Canada's Victory Bonds are offered so that this credit may be established.

The money so raised will be SPENT IN CANADA—will be used so that those who SELL to Great Britain can be paid IN CASH.

Therefore, it is in your interest as a business man—to say nothing of your duty as a patriotic citizen—to DO ALL YOU CAN to make the issue of Canada's Victory Bonds a GREAT SUCCESS. Suggest it, discuss it with your customers. Study the question so that you can advise those who are sure to ask you about it.

Canada's Victory Bonds, moreover, are an exceptionally good investment. They earn a good rate of interest; the principal is secured by the signed pledge of Canada, backed by all the resources of Canada. Any bank will lend money upon their security alone, and the bonds can be sold at any time.

Buy Canada's Victory Bonds when offered in November, to the limit of your ability. Even anticipate future profits so that you may do so. Your bank manager will help you—he will arrange any accommodation within his power for this patriotic purpose.

That's the Way to Keep Your Business Booming

Issued by Canada's Victory Loan Committee
in co-operation with the Minister of Finance
of the Dominion of Canada.

RELIABILITY

is an important quality of Famous Five files.

Mechanics can depend upon them to stay sharp for the longest possible time.

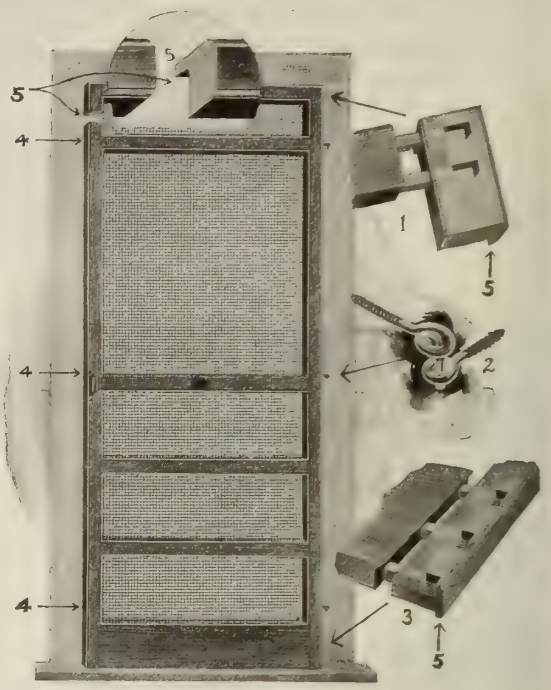
This is insured by the quality of our high carbon steel; the efficiency of its heat treatment; the perfection of our manufacturing process and the accuracy and evenness of the teeth.

Their RELIABILITY has made them standard grade tools in the estimation of all mechanics. That's why it pays to sell them.

Specify them when ordering from your jobber.

They are:

KASEMENT SKRENE DORES



That's why they can't sag, warp or pull apart

Every Kasement Door has 22 mortise and tenon joints (as shown above). The square tenons are one-sixteenth of an inch wider than the mortises. The door is squeezed together in a power press, it can be readily understood why the joints will not pull apart.

The frames are made from selected Southern pine, all stile lumber being quarter sawn. The stock is thoroughly dried before being made up, and the finished door is guaranteed not to sag, warp or pull apart.

Kasement Doors are easy to put up, and easy to take down. They save time in fitting—and they're guaranteed. There's customer-satisfaction for you.

Handsome demonstrating Model given free with initial order. Write to-day for prices.

"YANKEE" TOOLS

PUSH DRILL No. 44

Saves Time at Every Turn

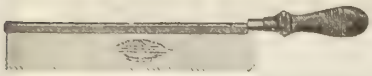
Here you have a rapid fire drill, with adjustable tension for hard or soft woods and the 8 different size Drill Points furnished with it.

A turn of the cap does the trick that saves time, labor and Drill Points. This drill is about as valuable to the average mechanic as any "Yankee" Tool we make. Built for hard service.

Your Jobber Can Supply

NORTH BROS. MFG. CO.

PHILADELPHIA, PA.



How about the "Handy-man-about-the-house"?

Almost every home can use and really needs tools of some kind and this is a field which many dealers neglect to cultivate. But in many of these homes are potential amateur mechanics who would, if assisted and encouraged, develop into regular purchasers of not only a variety of tools, but also other hardware. Almost every man has some mechanical ability and we all like to see the results of our own skill. All that lots of them need is a start. **Cultivate this field.**

Encourage the "home-mechanic" in your newspaper advertising and window displays. Show good samples of home-made cabinet work. Suggest it in various ways that your local conditions offer and you will have opened up a field of large possibilities.

Sell them only high-grade tools. Enquire what kind of work they intend doing and give them the particular style suitable for that work. Many a customer has been lost because a clerk was not sufficiently interested in the customer's needs. For instance, no better saw is made than the DISSTON, but a 6 point hand saw is not suitable for cabinet work in hardwood. The amateur is consequently discouraged at the outset. See that he has the right quality and type of tools at the start and his enthusiasm will bring him back to add to his kit and equipment as his skill and requirements expand.

A fine foundation is a set of

DISSTON SAWS

Other Disston Tools are of the same high standard

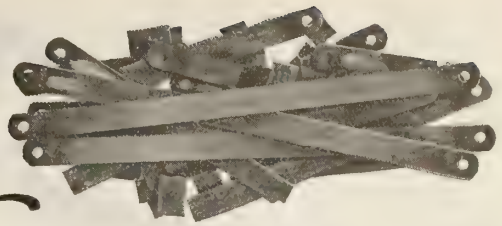
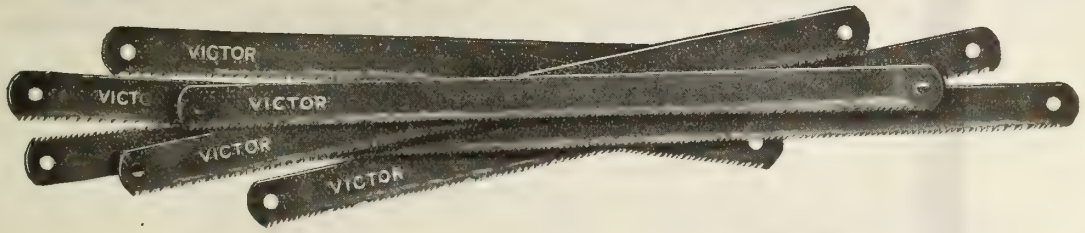
Cut the High Cost of Cutting



9 out of 12 all-hards break before worn out. Full service from ONLY 3 blades.

VICTOR Flexibles



7 VICTOR Flexibles—you can't break em—will do the work of 12 all-hards. FULL service from EVERY blade.

The high cost of all tools and supplies demands every economy possible — rapid and increased production demands speeding up in all departments.

Apply this to hack saw blades.

VICTOR flexibles reduce consumption and increase production — they will give you 100% service.

In actual use day-in and day-out, seven to nine VICTOR flexible blades under average shop conditions will do as much cutting in hand work as twelve of any All-Hard blades, barring none, because a large percentage of the All-Hard break before worn out — you get full service from only a small portion.

VICTOR flexible blades will not break in use except through intentional abuse—you get full service from every one, saving the cost of from three to five blades—and no time is wasted in replacing broken saws.

VICTOR flexibles have equally as good cutting qualities as the finest All-Hard. Prove this for yourself.

GET A BOX AND TRY 'EM

TONCAN METAL

Resists Corrosion

THE tinner who furnishes his customers with cheap, short-lived material forgets that he has any competition and that Mr. Competitor may step in and take his customer away by furnishing something better; he overlooks the fact that Mr. Customer may become prejudiced against all forms of sheet metal and when he needs roofing, for instance, he will order something which he can apply himself and for which he does not need Mr. Tinner.

Satisfy your customer in every way and you will keep him. Moreover you will not force him away from the sheet metal industry into the hands of other trades.

Your customers will be satisfied with Toncan Metal Sheets and products because of their durability and moderate cost.

Toncan Metal Sheets are corrosion resisting to an extent hitherto considered impossible in an iron ore product. They are as near 100 per cent. pure as it is possible to make commercial sheet metal.

Next time you order sheet metal in any form, black, painted or galvanized, don't say "Sheet Metal"—say "Toncan Metal".

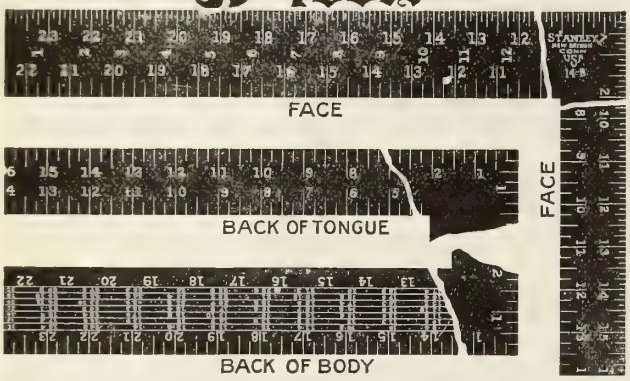
Stanley Tools



Stanley Steel Squares

Every Stanley square is weldless, or, in other words, made from ONE piece of steel, and all four edges are machined. Particular attention is called to the finish of all numbers and the depth and accuracy of the graduation.

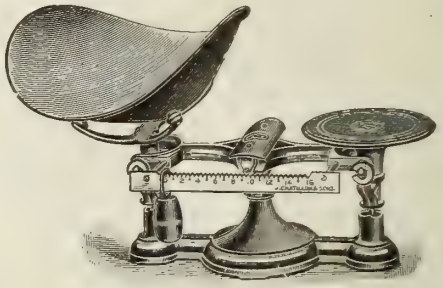
Special care has been given to the simplifying of all tables used, so that the workman can get the measurements he desires with ease and rapidity.

They can be furnished in a number of different styles, and the variety of finishes offered include Royal Copper, Blued, Nickel Plated, Galvanized and Polished. All Royal Copper and Blued finished Squares have white enamel figures and graduations.

Each Square is packed in an anti-rust wrapper and this stamp STANLEY NEW BRITAIN CONN U.S.A. appears on the face of all numbers.

Send for special circular containing complete description.

STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN. U.S.A.



The name of John Chatillon & Sons has been a guarantee of quality to the trade and consumer ever since 1835. The complete line of scales we manufacture gives universal satisfaction to the user and allows a liberal margin of profit to the dealer.

Twenty-five years ago we added to our plant the facilities to manufacture Foster Bros.' line of Butcher Knives, and Cutlery. To-day this line enjoys a world-wide sale. You will find that it is just as easy and profitable to handle this cutlery as it is to sell our Scales and Balances.

Our products are the results of years of experience. Only the best materials for their particular purposes are used throughout. Our own skilled workmen are experienced in the manufacture of our products and we continually strive to maintain the high standard of quality that has always distinguished the products of

"YES, SIR, that's a real hack saw. Not strapping with notches cut in the edge. Not inferior steel that bends out of shape and stays out of shape. No, sir! thats a

Starrett Hack-Saw

with snap and whip to it that means business from the time it gets its teeth in the metal until the cut is finished.

"Just a hack saw, you say. But this common name won't do for a tungsten steel blade like this. Why, every tooth in it is milled and set just as if this hack saw were to establish the Starrett reputation.

"And it fits its job, too. Maybe you don't think that's important, but try it yourself.

"You don't call in a grocer when you have a toothache. But there are some mechanics who try that stunt with hack saws—put a brittle, coarse-toothed blade on a piece of tubing and then wonder why it strips. Or use a fine-toothed saw on brass rod and wonder why the teeth clog and the blade snaps.

"No, sir, you can't treat hack saws mean any more than you can people; and that's another reason why I like Starrett Hack Saws. You don't need to go wrong. They have got good saws and they know how to pick the one that does the work best. Guess that's why they say that Starrett Hack Saws **cut faster and last longer.** I know they do."

You'll sell more garage hardware if you know more about it.

In the booklet, "The Man Behind the Counter," you'll discover a wealth of information about

STANLEY GARAGE HARDWARE

For Instance

The owner, when planning the garage illustrated above, wanted doors that would open and close easily, lock securely and close weather-tight.

His problem was solved by swinging the doors on Stanley Garage Hinges No. 1457, equipping them with Garage Bolts No. 1055 and No. 1056, and securing them against slamming with Stanley Door Holders No. 1774.

Other problems of a similar nature will be discussed in these pages from time to time.

Meanwhile, send for "The Man Behind the Counter." It contains many valuable selling pointers and is brimful of interest.

This booklet and our latest Garage Hardware Catalog will be sent free on request. Write to-day for them to

U. S. Hardwaremen Support War

Great Convention at Atlantic City Represented Collective Investment of $15,000,000—Scarcity of Materials and Labor to Continue—Move to Eliminate Waste.

IT was clearly evident at the conventions at Atlantic City last week of the American Hardware Manufacturers' Association, and of the National Hardware Association of the United States that the hardware men of the United States are heart and soul in the war, and will support the Government in every possible way, to bring the war to an early and successful conclusion. A stirringly patriotic resolution was unanimously carried in which the hardware men placed themselves unreservedly at the service of their country in the present war. The conventions were held on Oct. 16-19. The hardware manufacturers and wholesalers in attendance at the conventions represented a collective investment of $15,000,000,000.

On Tuesday preceding the formal opening of the convention proper of the National Hardware Association, the automobile accessories branch held a meeting at which was discussed the relation of the hardware jobbers to the distribution of supplies. Out of sixty-five jobbing houses represented at the meeting only seven were not actively engaged in pushing the sale of motor accessories.

Joint Meeting

A joint meeting of the associations was held at the Marlborough-Blenheim on Wednesday morning.

The convention was disappointed to learn that Secretary of War Newton D. Baker, owing to important business in Washington, was unable to attend and deliver an address on "American Business and the War."

The meeting was keyed up to a high pitch of patriotism, and its high tension was sensed by all present in the addresses of the various prominent speakers.

One of the first speakers was C. A. Knapp, President of the National Hardware Association. He voiced his pride in the patriotic sentiment which permeated the great body of hardware men at the meeting.

Mr. Knapp, in his address, dealt with several important phases of the hardware business, and extracts are appended herewith:

Wholesalers Not Benefited By High Prices

"Business, as we all know, has been unusually prosperous and prices have been abnormally high. Indeed, we fear that on many commodities the question of cost has been lost sight of and that there is a tendency on the part of many to secure as high a price as possible regardless of all cost relations. The wholesalers, who have long since disposed of merchandise which they held at the time prices advanced, have not to so great a degree been benefited, in fact on many commodities the margin of profit has been less, simply because of their earnest desire to make it as easy as possible for the retailer to satisfy the consumer who has been loath to pay such highly inflated prices."

"The present conditions have proven beyond any question, the absolute necessity of the wholesaler, as it was only because the latter was willing to take the risk of a loss by reason of a possible recession in prices, that he had in his warehouse, of convenient access to the retail trade, large supplies of merchandise ready for delivery to his customers on quick notice.

"The retail merchant who has been looking to the jobber as his source of supply has been greatly benefited thereby while those who have felt in the past that there might be a saving of some additional profit in the buying of goods by direct connection with the manufacturer, have been embarrassed in their business with the consumer simply because they could not obtain prompt deliveries to which they had been accustomed.

"Prominent retailers throughout the country have conceded that there could be no longer any question as to the sound economical position occupied by the wholesaler of hardware, and it is our own earnest hope that the benefit derived from this education will continue after the present most unusual conditions have been changed.

"The subject of Trade Acceptances has been prominently kept before the trade and some houses have already shown their customers the advantages to be secured from the adoption of that system of settling accounts.

"We have secured prompt information

concerning the provisions of the War Tax Bill and have been in constant communication with the legislative authorities on this subject.

Hardwaremen and Auto Supplies

"The Automobile Supply Branch of the Association has done some efficient work and it is particularly pleasing to know that a large number of manufacturers who have become associate members of this Branch of the Association, are recognizing the fact that the service being rendered by the wholesaler of hardware is a valuable one and while we take no issue with other mediums of distribution, we are convinced that ultimately the distributors of automobile supplies will be the wholesale hardware houses of this country.

Importance of Co-operation

"There never was a time in the history of this Association when it was more important for us to get together and confer with each other as wholesalers and with the manufacturers than at present. We do not propose to discuss during these meetings the minor questions, but rather will devote our time to the consideration of larger issues and, hence, have asked a number of prominent manufacturers to address us during our sessions."

Dr. Davies' Address

At the close of President Knapp's speech, the assembly sang to the tune of "America" a patriotic anthem entitled, "God Keep and Guide Our Men." The song was followed by an address by the Reverend John R. Davies, D. D., of Philadelphia, Pennsylvania.

"This country went to war because it had no other alternative as a self-respecting nation," declared the Reverend Doctor Davies. "All the wars which have gone before were mere skirmishes compared to that which now ingulfs the world. Never since the first man looked out upon the earth has God seen such a sight.

"Men talk of the defeat of Germany. Germany was defeated when she sank the Lusitania. The pan-German idea is one of the most hellish man ever has conceived. Our duty is plain. I am a foreigner. Forty years ago I landed at Castle Garden, an immigrant. Whatever I am and all I have are due to the opportunities this great country afforded. My first duty is to that flag."

Men and women arose and cheered and the hall reverberated with wave on wave of applause.

The Reverend Doctor Davies stated that when the war is over America would be the commercial and financial capital of the world.

Address of President Plumb

Fayette R. Plumb, President American Hardware Manufacturers' Association, followed Dr. Davies and his appearance was followed by a hearty reception on the part of those present. Mr. Plumb, in his address, referred to the enormity of the war undertaking of the United States. He also referred to the price agreement on steel. The address in part follows:—

"This convention is different from any that has preceded it. The problems confronting us are new. Important as are the problems connected with our relations to our regular trade, they are now over-shadowed by the demands of our new customer, the United States Goverment, and the unprecedented difficulties attendant upon production. Our sessions will be largely devoted to the consideration of the problems raised by these conditions.

"The preparations for the conduct of the war grow in magnitude from day to day. At our convention at Houston I spoke of the effect which the raising of an army of two million men and the proposed war expenditure of seven billion dollars to June 30, 1918, meant to business. I think many of our members were inclined to look upon my remarks as being "bull talk," but everything I said at that time has since proved to be an understatement. We then expected to loan our Allies to be spent in this country $3,000,000,000. We now expect to loan them seven billion dollars. We then expected to spend ourselves, for war, four billion. We now expect to spend twelve billion dollars. No one can have any conception of what nineteen billion dollars means. It is over $50,000,000 every day. Nineteen billion dollars means $750 per year for each man in the United States engaged in any kind of gainful occupation. Seven hundred and fifty dollars is more than the total income of most of us. With our Government and our Allies making such purchases here, what chance is there going to be for supplying any considerable portion of our ordinary requirements in addition?

"We have already begun to experience some of the difficulties in keeping and securing an adequate labor supply as intensified by the first draft. We all know enough about conditions to know that this situation is going to grow steadily worse. The appropriations already made by Congress are to provide for another million men under arms before next June. It is proposed to raise the army to over four million as fast as the men can be supplied and trained. Probably before long we shall have another registration with the age limits considerably extended to provide these additional men. Can you see what this will mean? It is not only the men withdrawn from each factory, but the competition for labor that will arise to replace these men. Just as a shortage of supplies advances the price, so will this shortage of labor advance the price of labor. And this effect will be heightened by the advancing cost of living. Don't let any of us fool ourselves by thinking because the cost of labor is very high now and that our employees are satisfied, that the top has been reached. It has not and it will not as long as the war lasts. You know that about the time the government steel prices were announced, Cambria, Bethlehem and the Steel Corporation each announced a 10% advance to labor. This made 60% advance in less than two years. One of the agreements in regard to the new steel prices was that the price of labor should not be reduced.

"This voluntary price agreement on steel has created a lot of misapprehension. The price is very little, if any, below the prices at which steel has actually been shipped; $2.90 base Pittsburgh for bars compares with $1.25 in July, 1915, and $4.50, the nominal quotation for July, 1917. But very little steel has actually been delivered at anything like this high price. Steel bars could be bought last January for $3.00. I do not believe many manufacturers have received much, if any, steel bought since then. Pig iron is now set at $33.00, which compares with $14.25 July, 1915, and $52.00 July, 1917. Pig iron could be bought at $30.00 as late as last January. I very much doubt, therefore, that the new prices will bring any real reduction in cost to any far-sighted manufacturer who has kept in touch with the market. I also doubt if it is going to save them much in the future except on war business, because unfilled orders and contracts are, I understand, to be filled at the prices at which placed. I know of business which has been placed at $4.50 since the $2.90 price for bars was announced. It is better to get it at $4.50 than to go without it at $2.90. I believe $2.90 bars will be as scarce as $2.00 coal. How many of you have been able to buy coal for $2.00, though this is a compulsory price set months ago, while the steel price is entirely voluntary on the part of the big producers?

"It is seriously suggested that before many months it will be practically impossible to secure steel for any purpose except the war requirements. It won't be a question then as to the price of steel or the price of hardware, but simply a question as to how the small amount made can be distributed to the best advantage. Just think what it will mean to supply an army of four million men. To equip, supply, transport and feed such an army as this will require the utmost effort of the entire country. There is no getting away from these fundamental facts. With our supply of steel, therefore, required almost entirely for war products, labor so scarce that there will be the keenest kind of competition to secure it, and a demand for war products that will fall specially upon the manufacturers of hardware, how can you expect anything but a demand that it will be impossible to fulfill?

"The position of the hardware trade is altogether exceptional. The cost of the war will press heavily on those who make or deal in luxuries, but hardware is a necessity. The farmers will be a favored class. Big crops at unheard of prices have put money into their pockets. The lumber business is active and prosperous. Industry in the mines, the factories and on the railroads, all over the country is going ahead at top speed.

Wear and tear is excessive. It is said the government is considering the advisability of putting up thousands of houses in the new industrial districts beside the various warehouses and hospital buildings it will have to erect. Those who rely for their income on accumulated capital will pay for the war, but those who earn their living will have more money to spend than ever before.

Even the high prices which it will continue to be necessary to ask will not prevent the man who has money in his pocket from buying what he needs. As the government takes a larger and larger share of the output of the hardware manufacturers, their product will become increasingly difficult to secure. Happy soon will be the jobber who has a good stock. The wise man will not wait till it is impossible to produce or to secure his stock, but if he is a manufacturer will use every effort to increase his production in anticipation of an increasing demand, and if he is a jobber will order all the hardware now which he is able to pay for."

Patriotic Resolution of Joint Session

The joint session was not content with a spoken pronouncement of its obedience to the behests of the nations. In order that the President and citizens of the United States might know that. heart and hand and purse without quibble or evasion, the hardware manufacturers and jobbers of America are in the fight to free the world from the monstrous tyranny of Caesarism, they took pains to set down in writing and publish to the country the resolution which follows:—

"Resolved, by the wholesalers and manufacturers of hardware, members of The National Hardware Association and The American Hardware Manufacturers' Association, assembled in convention, that we record our appreciation of the wonderful accomplishment of our National Government in preparing for the successful prosecution of the war in which we are now engaged and that we further pledge our loyal and undivided support to our President and to all in authority toward the rapid and successful prosecution of the war and that further we record our willingness to lend all possible assistance and co-operation and to make all necessary sacrifices for the aid of the Government."

Canadians Address Meeting

J. W. Dowling, Caverhill, Learmont & Co., Montreal, President Canadian Wholesale Hardware Association, was the next speaker.

The address of Mr. Dowling was listened to with intense interest. The keynote of the address of preceding speakers was the effect of the entrance of the United States in the world war. Mr. Dowling came before the meeting representing Canada, now in the fourth year of the war, and his remarks were received as coming from a man who spoke with authority as a result of having actually experienced war conditions through his connection with one of Canada's largest wholesale houses.

Mr. Dowling pointed out that business problems in Canada during the past year have been somewhat similar to those of the United States. The biggest problem facing the trade to-day, stated Mr. Dowling, will be the matter of conserving profits made during the war, in the period of declining prices which must inevitably follow in the distant future. The profits of the past two or three years may have seemed abnormal, but he pointed out they could not be counted as actual profits until goods bought at abnormally high prices are disposed of in a declining market. The trade may be called upon to face 1 or 2 years of losses which will offset the big profits of previous years.

Canada is a large country with a comparatively small population, stated Mr. Dowling, but it has been in the war from the start and has actually experienced the results of a conflict of this nature. Most homes have felt the effects of war, stated Mr. Dowling, and many families are in mourning. Mr. Dowling warned his hearers that despite the tremendous war undertaking of the United States, they as a nation had not yet begun to feel the full effects of what war means. Mr. Dowling expressed the admiration which Canadians felt for the Administration at Washington for the way in which the big business men of the United States have been called in to help

JOSEPH W DOWLING
President of the Canadian Wholesale Hardware Association.

solve war problems. Mr. Dowling referred to the great bonds of friendship between Canada and the United States, which have been greatly strengthened by the entrance of the United States into the war, the fact that the two great countries are now fighting side by side is forming bonds of friendship which will never be severed. The friendship between the two countries is typified, stated Mr. Dowling, by the Stars and Stripes and the Union Jack which were entwined behind the speakers' platform.

Mr. Dowling's remarks were greeted with rounds of applause. Following Mr. Dowling's address Jas. Hardy, Secretary of the Wholesale Hardware Association, made a few well chosen remarks, in which he referred to the part Canada is playing in the great war.

Elimination of Waste

One of the most interesting addresses of the Thursday session of the American Hardware Manufacturers' Association, was delivered by Albert Zimmerman, Sales Manager The Stanley Works, on "How Manufacturers Can Apply To Their Own Line of Business, the Sentiment in Favor of the Elimination of Wasteful Practices."

Mr. Zimmerman made several excellent suggestions to the manufacturers. He also explained how manufacturers could eliminate to the advantage of all concerned many unnecessary finishes which are now applied to builders' hardware.

The Labor Situation

An address on "How To Replace the Men the War Takes from our Factories," was to have been delivered by Dr. Joseph H. Willets, of the University of Pennsylvania, who, however, was unavoidably absent. Dr. Willets was represented by an assistant who supplied some enlightening information as to how the labor situation had been solved in England by making use of female labor. Investigations conducted in England had proven that female workers quickly became adapted to the work which they had been asked to undertake. Female workers were less wasteful than the men, and were more ready to start work promptly on time. They were capable of doing heavy work up to the point where the weight to be handled did not exceed 60 pounds. Trouble had been experienced in some plants owing to the unwillingness of female workers to take instructions from male foremen, but this had been overcome by the appointment of lady superintendents who it was found could efficiently handle groups up to 30 workers. It was felt that in the United States female labor would have to become more generally used in order to make up for the shortage occasioned by enlistments of men.

The chairman of the meeting, observing that a number of Canadian manufacturers were present at the meeting, suggested that they might give some information as to how the labor problem is being solved in Canada.

Harry Wright, of E. T. Wright & Co., Hamilton, and Col. Hatch, of the Canada Steel Goods Co., addressed the meeting on this subject, and told how Canadian manufacturers are coping with the labor shortage.

Canadians Present

Among the Canadians present at the convention were: T. B. Williamson, H. S. Howland Sons & Co., Toronto; A. E. Gilverson and T. Lawson, Rice Lewis & Sons Co., Ltd., Toronto; Thos. Birkett, Jr., Ottawa; Herb Seybold, Starke Seybold & Co., Montreal; Dave Griffith, B. Greening Wire Co., Hamilton; Jos. Dowling, Caverhill, Learmont & Co., Montreal; James Hardy, Toronto; G. D. Davis, Hardware and Metal; R. B. Huestis, Hardware and Metal; H. S. Alexander, Wood Vallance & Co., Hamilton; L. G. Wright, E. T. Wright Co., Hamilton; Col. Hatch, Canada Steel Goods Co., Hamilton; Col. Robt. Starke, Starke Seybold & Co., Montreal; Chas. McGhie, Welland Vale Mfg. Co., St. Catharines; C. A. Whitwam, Hobbs Hardware Co., London, Ont.

Thirty Years in Babbitts

Science Brought to Bear on Babbitt—Developments Resulting From Investigation—Physical Properties of Babbitt—Following the Processes of Manufacture—Their Proper Use Essential to Long Life and Satisfactory Service.

By W. G. Harris, President The Canada Metal Co., Toronto.

W. G. HARRIS,
President The Canada Metal Co.

THE real, serviceable value of a babbitt does not necessarily bear any relation to the intrinsic or commercial value of the elements from which it is made.

To illustrate this fact, add five per cent. of gold to any of the high-grade babbitts and it will make them cost about fifty times as much, but it is quite evident that it will not make them wear fifty times as long.

The real serviceable value of all babbitt metals is directly proportioned to their registration in the physical properties which cover the conditions they are required to meet in service; and the value of all those physical properties increases in all metallic mixtures of perfect chemical affinity, and decreases as they recede from that condition in the mixture. Therefore, it is self-evident that to add any element to a metallic mixture in excess of the amount required to produce a perfect chemism would operate as a double loss. It would add to the cost of the mixture and operate to disturb its molecular tension, which would injure the quality of all its physical properties and reduce its value as a babbitt metal. For this reason, the most economical and satisfactory service is secured through the aid of an expert metallurgist who, knowing the physical properties required in the babbitt, goes to work in a scientific manner to produce a chemically united alloy at the least possible expense, which will possess the required physical properties.

Developments Resulting From Scientific Investigation

Invention and discovery in the line of metallurgical processes have within the last few years made some of the formerly rare elements available for use in this line of work, which enables closer chemical affinities to be established between the elements of metallic mixtures; and the expert metallurgist of the present age can design metallic alloys to meet special physical conditions with the same dependable accuracy that the expert mechanic designs special machinery.

A bearing metal has one definite service requirement, that is, to take care of the vital parts of machinery (the bearings). This cannot be accomplished with metal that is too hard or too soft. One increases friction, heat and wear, while the other may not stand the load weight or speeds, but mash or squeeze or disintegrate. The mechanical problem is the simple solution of what is the limit of load weight to which the bearings of any machinery may be carried. That limit every intelligent mechanic knows cannot exceed 2,500 pounds load weight to the square inch of bearing metal without disastrous results to the machinery, by either stalling the machine, destroying the bearings, breaking the belts or wrecking the weaker parts of the machinery.

Investigation will prove that 75 per cent. of the machinery in operation does not carry as much as 1,500 pounds load weight to the square inch of metal in the bearings.

Physical Properties of Babbitt

The properties of a babbitt metal which determine its real serviceable value are as follows:

First.—Tensile strength, the index to a babbitt's wearing quality. That is, the greater the force required to overcome the molecular tension of a metal, or a straight pull, the greater will be the wearing force or friction required to overcome molecular tension at its wearing surface.

Second. — Resistance to crushing strain; the index to a babbitt's carrying capacity.

Third.—Elastic tension; the index to a babbitt's ability to resist vibration or pounding.

Fourth.—Resistance to heat; the index to melting point.

Fifth.—Anti-friction quality; the index to the degree of angle at which the factor of friction is overcome by the force of gravitation.

(Continued on page 52.)

Getting the Overseas Business Now

Xmas Trade Should be Secured Now — Sale of Boxes Important, a Service Feature Apart From a Money-Maker—Keeping the Public Posted—Some of the Big Sellers—Postal Regulations.

THREE years of war have come and gone, and the fourth is on its way, and all the time, beyond seas, Canada's army of sons and brothers has been growing. It is true that dotted over the plains of Flanders are pathetic crossmarked plots that mark that "last full measure of devotion" that Canada's sons have given to the cause that they believed to be right. Dotted over France and England, too, are hospitals, where lonely lads are waiting eagerly for a word from home. Dotted over Germany are noisome prison camps, where Canadian boys are waiting for the war to cease, while along the shell-swept battle front there are Canadian boys enduring cold and discomfort, and pain and loneliness in order that liberty shall not perish from the earth.

There, in the far fields of France and Belgium, and even Germany, our uttermost outposts are, and it is well for us to remember this fact, to keep in mind the boys who are away from home, to provide for them the little comforts that will aid in making the life out there somewhat easier, that will be a bond to hold them through all the blood and suffering to their homelands and the folks at home.

For Christmas and For All the Year

The Christmas trade for the trenches is a great item, and deservedly so. We is Canada have always made Christmas a great day. The boys out there will be remembering other Christmases, and it would be a shame if something were not done to make this one day a little different from all the other mud-colored days of the year. Christmas is, of course, the great day, and the dearest day. But it is not the only one. This service for the trenches should be the thought of the merchant throughout the whole year. It should be his idea to keep it before his customers, because people, even those who have friends and relatives at the front, grow careless and need to have their attention drawn to this matter ever and anon.

Now Is Time for Christmas Parcels to Be Mailed

Two weeks at the outside remain for the sending of parcels to the boys in France and perhaps three weeks for parcels to England, if they are to be sure of reaching their destination by Christmas. That means action at once, and the hardware merchant has many lines which he can sell to fill the boxes for the boys, as well as selling the boxes.

Sale of Boxes Important—A Service Feature Apart From a Money Maker.

Some dealers have done a little of this business at Christmas time, and have overlooked it for the remainder of the year. Others have never sold the boxes, letting their customers buy such goods at their store as have seemed to suggest themselves, and have done nothing towards getting the goods overseas. In this way they have not only thrown away the opportunity to make sales, but have also thrown away the opportunity to be of service, to render the kind of service that people remember. Which is the more serious blunder it would be hard to say.

The problem of how to pack things, where to get suitable boxes, and necessary information as to shipments has been a deterrent factor in the greater increase of this business. The war has continued so long that some consider it only casually—they overlook their friends who are sacrificing so much—to whom the receipt of a box from home would mean such a great deal. It is not really such a case of neglect as a case of not knowing just what to do, just how to go-about it.

Here, then—is the hardware merchant's great chance to sell more than goods—to sell with them service and understanding and sympathy; to know that, while he is doing business, he is also doing something to help other folks to make the lives of the boys across seas more bearable.

Keeping the Public Posted

There are many ways, which suggest themselves, of bringing these lines before your customers prominently. In mentioning the many lines which the boys would like, point out that you sell the boxes as well—in displaying "goods for the Trenches" make it a point to display the boxes also. If people know they can secure suitable boxes to send their presents in, the sale of these goods will increase materially.

Some of the Big Sellers

In going over the lines which the hardwareman can sell, there are many items suggest themselves—the few mentioned here can be added to materially. Big sellers are razors, razor strops, shaving soaps, safety razors, pocket knives, jack knives, fountain pens, wrist watches with plain or luminous dial, and there are sundry lines which will come in for consideration as this trade is developed.

Postal Regulations on Parcels to France and England

One of the chief services that the hardwareman can give to his customer is in suggesting lines of goods suitable for boxes for the soldiers, and here it must be remembered that there are certain postal restrictions.

For parcels to be sent by parcel post, the limit for France is 7 pounds; on parcels from one to three pounds the rate is 24 cents, and on parcels from three to seven pounds the rate is 32 cents. Parcels for England, on the other hand, have an 11-pound limit and a rate of 12 cents a pound.

It should be remembered, too, that parcels intended to arrive by Christmas should be sold and away within the next couple of weeks.

Above and before all, keep the trench goods department to the fore throughout the whole year, for the sake of the boys in the trenches, for the sake of the feeling of mutual interest engendered between the merchant and his customer, and for the sake of the good business that will result therefrom.

The Dupont Powder Company of Philadelphia has subscribed $50,000,000 of the second Liberty Loan in the United States.

EDITORIAL COMMENT

THE STEEL OUTLOOK

THAT the war is, beyond everything else, of primary importance is being emphatically evidenced by the various measures of the United States Government at the present time. There is, of course, some uncertainty still existing as to the prices which will rule for many lines of steel and iron products; but of greater interest to hardware men generally will be the question of where they stand in the matter of securing merchandise.

The scale on which our new Ally is going into the war is beyond the conception of the average man, both as to money to be expended and material to be employed. The iron and steel industries are practically under government control, for their orders will be filled on a priority basis, which, of course, means that the government of the United States and her Allies will secure all their needs before the hardware man secures a wire nail or a thumb latch.

The consensus of opinion of manufacturers generally is that the jobbers and retailers with heavy stocks are to be congratulated. In having their shelves and warehouses loaded with merchandise, they are extremely fortunate and, in buying as heavily as their money will permit, they are acting wisely.

Shipments to jobbers will undoubtedly become more erratic than they have ever been in the past, and orders, which since 1914, it has taken twelve months to fill, may not be shipped for two years or more from the time of their being placed. The situation is certainly one to cause a current of uneasiness and it would seem that those jobbers who are carrying big stocks and have arranged for more will be the winners during the next twelve months.

Another year of war will undoubtedly find jobbers throughout Canada and the United States with stocks reduced to a point where they would be glad to pay premiums if they could only secure goods. This practice would undoubtedly call for government intervention, however, if carried to extremes, as it would have the effect of pushing prices to a still higher level.

The United States Government in regulating the prices of basic products has taken a decidedly forward step towards stabilizing markets, and, although some further advances may be made from time to time, they will not be of such a substantial character as has been evidenced during the past three years of war.

MR. HANNA AND THE PACKAGE IDEA

EARLY this week the Food Controller dropped a bomb into the peaceful circles of the food-handling fraternity, by his pronouncement that package cereals were under the ban. In any sort of regulation, of course, someone is bound to suffer, and it isn't often that the sufferer accepts the part with any degree of enthusiasm, but there would seem to be some reason for complaint in this instance. There are certain breakfast foods that are only marketable under the package system, and such a high-handed decision, made without the slightest consideration of the manufacturers' side of the case, would seem to work a good deal of injustice. Elaborate machinery will have to be discarded. Enormous stocks of valuable cartons will be wasted and nothing, so far as can be seen, will be gained; for the person who prefers to buy goods in bulk has always been able to do so.

Certainly there is a provision in the new Order-in-Council, providing for a licensing of manufacturers where these restrictions would prove a hardship, but it would seem a more reasonable standpoint to consider the question first, rather than to provide loopholes of escape after it has become law. It is probable that this is only the first of a series of such restrictions, which may, in the end, reach beyond the food department into other branches of trade.

WHO ARE WAR PROFITEERS?

THE press of Canada generally is encouraging public feeling against what is termed "War-profiteering," which term is made to apply to the operations of practically all concerns engaged in the manufacture or handling of war supplies, when such operations show a profit. The personnel of the Union Government would indicate sufficient strength to investigate all these alleged illegitimate profits, but are those who are turning out war supplies the only ones whose business will come under investigation?

What of the jobber who follows the markets, what of the retailer whose prices advance as manufacturing costs climb, what of the farmer who gets the highest figure for all of his products, what of the striking laborers whose demands are becoming increasingly insistent? Do all of these come under the class of those who are profiting from conditions

brought about by the war or is it only the manufacturers, who assumed large risks in enlarging their plants to take care of munition orders—to increase their shipments of foodstuffs, etc., who should be censured when their investments have resulted beneficially?

HARDWARE AND METAL holds no brief for Sir Joseph Flavelle or any other prominent men whose operations will come under investigation, if it is proven their profits are illegitimate. However, it must be remembered that to these men, to their capacity for getting things done, is due in a large measure the success attendant in supplying our men at the front with what they have needed in foodstuffs and munitions. The organizations which are controlled by big business have played and are playing a mighty important part in the present crisis and there is a growing undercurrent of recognition of their valuable services. This is evident in the United States to a greater extent than in Canada.

In the United States to-day these big organizations are being called upon to save the situation. Combination of interests with increased efficiency of production and service is being recognized as necessary to bring about maximum results. The need of the hour is imperative and big business is called upon to fill the breach.

In Canada, where the need for organization has not been so apparent, or where, at least, it has not been fully recognized, big business is still made the target for public attack, and the men whose ability and energy has been responsible for the part the country has been able to play in supplying the Allies' needs are still looked upon by the majority as "profiteers." However, there are indications that intelligent opinion is quietly recognizing the actual conditions.

CO-OPERATION THE KEYNOTE

AT the recent meeting of the Wholesale Hardware Association in Montreal, manufacturers were invited to express their opinions in regard to trade conditions affecting those lines that are largely handled by the wholesale hardware trade.

The meeting was a large and representative one and the exchange of views was considered very valuable from the standpoint of both jobbers and manufacturers. The conditions of general hardware stock as at present constituted and the outlook for the future were matters of vital importance which were discussed.

The entry of the United States into the war has called for an immense tonnage of goods which is affecting a number of lines which the jobbers are handling and as the Canadian manufacturers had pledged themselves to do all they could for the Allied cause, it would undoubtedly be much easier to dispose of stocks on hand than to replenish them.

Indications pointed to the fact that jobbers generally were not heavily stocked. The matter of prices was referred to as showing that conditions generally pointed to present values holding steady for some time to come.

A spirit of co-operation pervaded the meeting and owing to the benefits derived from this mutual exchange of views, it was the consensus of opinion that it would be mutually advantageous to hold other meetings in the near future.

THE MARKET VALUE OF COURTESY

IF YOU were to ask any well informed person as to the reason why people change the store at which they have been accustomed to deal, the answer would probably be because of some failure to provide the quality of goods that the customer desired. That would seem to be the logical inference, but it is none the less incorrect. Some time ago a business agency propounded this question to 120 persons who were known to have changed from one store to another. Of this number, only one had changed because of dissatisfaction with the quality of the goods. Indifference of salespeople headed the list, and attempts at substitution came next. Here is the complete list of reasons given for changing together with the number of cases ascribed to each:

Indifference of salespeople	47
Attempts at substitution	24
Errors	18
Tricky methods	18
Slow deliveries	17
Over-insistence of salespeople	16
Insolence of salespeople	16
Unnecessary delays in service	13
Tactless business policies	11
Bad arrangement of store	9
Ignorance of salespeople concerning goods	6
Refusal to exchange purchases	4
Poor quality of goods	1

It appears from this that honest methods and courteous service are unquestionably the greatest elements in retaining the good-will of the customer, and the item of courteous service seems to stand at the very top of the list.

That is a thought worth considering, Mr. Hardware Man. Your business systems, your goods and your honesty, may be beyond criticism, yet the discourteous word of a clerk, the appearance of indifference to a customer, or the failure to give prompt and courteous attention, may offset all these and make them of no effect. That is a point for your earnest consideration.

RETAIL hardware merchants are buying freely but carefully. They realize that over-stocking is a dangerous game at any time, and particularly now, in view of recent market developments.

* * *

COLLECTING those old accounts has been in your mind for a long time. Do it now and invest the proceeds in war bonds. Here is an opportunity for you to make these old accounts render your country a real service, besides bringing you in mighty good interest. A patriotic duty then—collect all your old accounts and turn the money into war bonds.

Abundant Coal for Canada

Canadian Industries to be Well Supplied With U.S. Coal This Winter—Embargo Lifted—Profits Fixed at 50c Ton.

IT is not expected that Canadian industries and householders will be called upon this winter to suffer the hardships caused by the lack of coal during last winter. This statement is based on the recent announcement from the United States Fuel Administration to the effect that the embargo against coal shipments to Canada has been lifted. "This action was taken," it was announced, "because it is vital that Canada's war industries be kept going at full blast. Canada got approximately 19,000,000 tons of coal, anthracite and bituminous, from the United States last year. This year she will receive the same amount plus an increase pro rata upon the excess over last year's production."

The question of the price of coal is one which has also received considerable attention in Canada, resulting in the announcement from Fuel Controller C. A. Magrath that regulations will be issued which will fix the profits of dealers. It is expected that the regulations will fix the profit on the sale of coal by brokers, wholesalers, and retailers throughout Canada, and limit same to 50 cents a ton for retailers, with a still lower scale for brokers and wholesalers. It is also likely that provision will be made to restrict undue accumulation of coal in the hands of consumers.

It is stated that the fuel regulations are very comprehensive and provide for drastic action against any infractions of the provisions.

The coal production of the United States this year is said to be 10 per cent. higher than last year. This increased production, combined with Government control over its disposition, are the chief factors in making possible larger shipments to Canada, and with better transportation facilities available in this country, coal supplies should be well guaranteed all winter.

Following the difficulties of last winter in the matter of transporting the coal from the United States boundary to Canadian points, the railway companies made an investigation of the matter and have taken steps to relieve the situation this winter. Railway officials state it is impossible to secure new cars in any quantity, and that, therefore, the only solution is to secure wider use from cars available. In this connection it is known that much of the car shortage problem was brought about by the delay in unloading coal cars. An increase in the demurrage charges has been suggested as the solution of this difficulty. It is realized that much of the delay in putting cars back into service is unnecessary, and is the direct result of inefficient handling on the part of local coal dealers responsible for the unloading of cars.

In the United States it has been found that large supplies of anthracite have been used where bituminous or coke would have served the purpose equally well. Government control will effect the more efficient use of supplies available, and in both the United States and Canada will result to the advantage of all parties concerned.

Coal shipments to Canada will be controlled by the United States Fuel Administration, and will be made through special permits to shippers, who will be allowed to forward cargoes up to the amounts prescribed by the administration without obtaining special export licenses. Permits will be granted only to shippers who sent coal to Canada last year. The plan is to hold Canada the rest of this year to supplies not exceeding 10 per cent. more coal than was received last year. This arrangement is based on the 10 per cent. increase in production in the United States this year and permits Canada to share equally with the States.

So much is being said about the shortage of bituminous coal that the recent statement of the United States Geological Survey, regarding the production this year as compared with last, is particularly timely. On September 1 the soft coal production of the United States was a month ahead of last year in output, and it is expected that the year will be finished with an increase of 10 per cent. over 1916.

The tremendous increase in manufacturing and transportation activity this year has created a demand for soft coal in excess of any in the past, and an increase that is more than the 10 per cent. by which production has been increased. To meet this demand the U. S. mines have been producing soft coal at a rate never before equalled. In the second week of July, 1917, the average daily production was more than 1,900,000 tons, the highest point yet attained. In the first eight months of 1917 the output of soft coal was 363,500,000 tons, or 37,000,000 tons more than in the first eight months of 1916. In the same period shipments of anthracite increased 16 per cent. over those of 1916.

"Victory Convention"

Twelfth Annual Convocation of the Members of the Staff of the Martin-Senour Company, Montreal, Held This Week.

COMMENCING Monday, 22nd inst., in the Place Viger Hotel, Montreal, the 12th Annual General Sales Convention of the Martin-Senour Co., designated the "Victory Convention," was held this week with great success. Proceedings began with an opening address by Mr. A. T. Black, general manager, and introduction of new members of the staff. Territorial reports and their discussion formed the afternoon proceedings on Monday, and on Tuesday a demonstration was held at the plant under the direction of R. S. Daly and W. J. Smith. A discussion on service was held on Tuesday afternoon, a theatre party in the evening of Tuesday, and on Wednesday, at the Place Viger Hotel, discussions were held on business matters, marine business being specially spoken of by T. L. Sheppard and R. Bernier, public institutions by J. H. Conover, and dealer-agent business by E. J. Cookson and G. Tasse, followed by a general discussion. Further constructive matter on making dealer agencies more exclusively complete was led by H. M. Borland and J. E. Naud. On Wednesday afternoon, "Opportunity" formed the subject of discussion, led by C. F. Kendall, and "Cultivation of Good Relations With Dealer Agents" was dealt with by C. D. Cookson, J. Brault, and W. L. Magee. The president at the Monday p.m. session was C. F. Kendall; J. H. Conover had charge of the factory session on Tuesday morning, and T. Houghton in the afternoon. W. P. Walsh presided over the Wednesday discussion, and on that day, after closing remarks at the end of the afternoon session by A. T. Black, the convention adjourned, to reassemble at the annual family dinner held in the Canada Club, at which the Z. E. Martin trophy was awarded. Mr. T. L. Sheppard, Maritime Division, was the winner of the trophy. The session on Thursday was for individual business discussion.

ADULTERATED GLYCERINE

In consequence of some complaints received by the Department of Inland Revenue in regard to the adulteration of glycerine, the Department Laboratory recently made some investigations. Of 230 samples tested, there were 194 judged as genuine, 6 as doubtful, and 30 adulterated. Genuine samples were judged as containing less than five per cent. of water, and doubtful samples were those containing between 90 and 95 per cent. of glycerol. It was declared by the Chief Analyst to be most improbable that anything like ten per cent. of water could be introduced into the article, and in such cases the samples were declared to be adulterated.

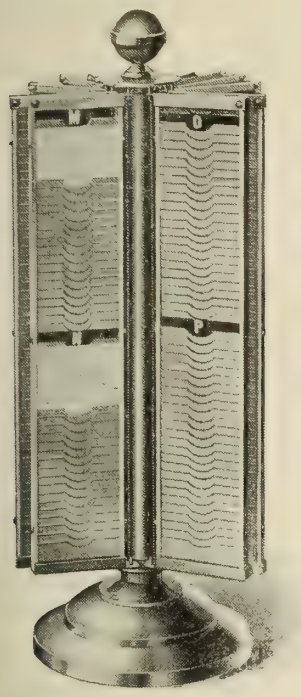
Montreal.—Hamilton Brass Works has dissolved.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

KOHLER VISIBLE CARD INDEX

A new card index equipment is being manufactured for the trade by the Kohler Die and Specialty Co., DeKalb, Ill. This index is of the revolving type each leaf being hinged to swing. The size of each leaf is 4 inches in width by 22 inches in height. The stand as shown



Kohler Visible Card Index.

is arranged to accommodate 16 leaves, each containing 100 pockets, 50 to a side, giving a total capacity of 1,600 pockets.

The cards, 1½x3¾ inches in size, may be used on both sides, and in case one card is not sufficient for the purpose, additional cards may be used and filed with the original, as the divisions between the pockets, which are made of sheet metal, are hinged to the frame at the bottom in such a manner that the cards, one or more in number, are held securely, yet any one or all may be removed instantly without disturbing the others.

The set of leaves are hinged to a revolving plate resting on ball bearings, which revolves about the standard, permitting any desired section to be brought to the front.

It is claimed that the uses to which this index may be put are almost without number. In the collection department in banks, as a daily reminder, for a record of purchase orders and deliveries, salesmen's routes, record of customers as well as prospects—in fact, the manufacturers claim there is hardly a department in any large mercantile institution that cannot make use of an index of this character in some form.

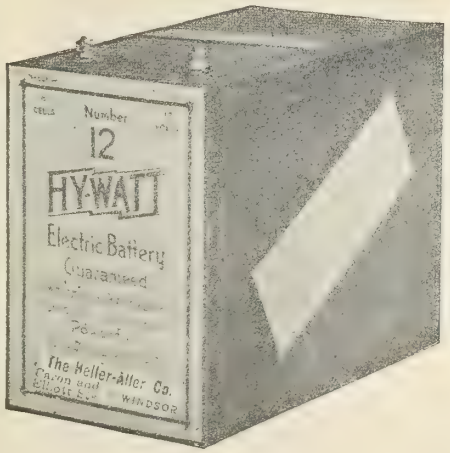
The manufacturers are prepared to figure on special requirements which demand an index of particular construction.

"ORO" AUTO BUMPER

The Au-To Compressor Company of Wilmington, Ohio, manufacturers of the Au-To air compressor and the Oro line of automobile accessories, have placed on the market a new bumper for the Dodge car. The attachment is claimed to necessitate but ten minutes' work. The bolt fastening the splash pan to the frame of the car is removed and the bumper bracket placed on top, the bolt is inserted and the nut tightened. This operation is very simple, and is claimed to add an elegant finish to the car. The brackets are finished in baked rubber finish enamel and the bars are nickel-plated after being treated with an anti-rust solution. The bumpers are furnished in various shapes, channel, diamond and round, and immediate deliveries can be made by this company.

HY-WATT ELECTRIC BATTERY

The Heller-Aller Company, Windsor, Ont., is marketing the Hy-Watt Electric Battery, which is claimed to be popular with Ford owners. The battery insures bright automobile lights at



Hy-Watt Battery.

all times, no matter what speed, and is claimed to provide a dependable system that can also be used for starting or continuous ignition. The Hy-Watt is a new type of battery claimed to be small, convenient, light in weight, long lived, waterproof, non-freezable, and to give twice the electrical energy of any other battery of similar size. There are only two points of connection on the battery and it is claimed that the battery works down to the last particle of material.

KESTER CRYSTAL-CORE WIRE SOLDER

Kester Crystal-Core Wire Solder has recently been introduced by The Chicago Solder Company, 218 North Union Ave., Chicago, Ill. The solder comes in the form of a hollow wire which is filled with an acid flux that flows as the solder

Kester Crystal-Core Wire Solder.

is used. It is therefore claimed to be "ready to use." The tube is a series of separate cells, the separation preventing any excess flux from flowing out. The solder is made from Straits tin and St. Joe lead, both claimed to be absolutely pure metals. The solder can be used with or without a soldering iron, and is claimed to be especially suited for work on motor cars. It may be used on battery terminals, gasoline tank and pipe joints, electric light connections, speedometer flexible shafts, spark plug terminals, cracked fenders, radiator leaks, wire connections, and in general garage repairs.

E & S. GARAGE JACK

Ellis-Smith Mfg. Co., Inc., Buffalo, N.Y., are introducing a new garage jack known as the E. & S. Junior Jack, which is claimed to be the biggest time and trouble saver a garage can have. The Jack is said to be perfectly adapted for moving cars anywhere about the garage no matter how cramped the space, and thus eliminates the necessity for a turn table. With a 5½ foot handle, the Jack is claimed to be able to lift the heaviest car with little effort. The Junior Jack is on the principle of the

(Continued on page 39.)

EVENTS IN THE TRADE

BUSINESS CHANGES

Toronto.—J. D. Naylor, hardware, has been succeeded by W. E. Platt.

Alida, Sask.—Johnson & Hunter, hardware, have sold to A. Renauld.

Fort William.—Gerry Bros., hardware, have been succeeded by Ira N. Gerry.

Birnie, Man.—V. M. Wilson, hardware, has been succeeded by E. Wilson.

Wallaceburg, Ont.—Bert Husband has sold out his interest in Shaw & Husband hardware to the other members of the firm. Five years ago the two firms of Shaw and Husband were amalgamated.

TRADE NOTES

Viscount, Sask.—Since October 9 all stores close at 6.30 p.m.

Cupar, Sask.—F. C. Hesketh — Company, hardware, are to be incorporated.

Pense, Sask.—McGillivray's hardware was burglarized of $80 in cash and some tools recently.

Wetaskiwin, Alta. — Baron & Company have leased premises to be stocked with complete new line of shelf and heavy hardware and furniture.

Brandon, Man.—Some local retail merchants have agreed to sell only for cash on and after December 1. All tradesmen are expected to line up with the movement before that date.

Preston, Ont.—"The Progress" recently carried the following: "Bernhardt's hardware store has a display of ammunition and guns in their window which appeals to every sport and hunter. A mounted wolf draws special attention to the well dressed window. Deer season opens up on Nov. 1."

OBITUARY

Montreal.—P. H. Holland, President Winn & Holland, commission metal merchants, is dead.

Mrs. Henry R. Towne, wife of the chairman of the board of the Yale & Towne Manufacturing Company of Stamford, died last week in her home at Stamford, Conn.

Besides her husband, Mrs. Towne leaves one son, John H. Towne, secretary of the Yale & Towne Manufacturing Company office in New York.

Toronto.—John Morrison, vice-president and general manager of the Standard Silver Company, is dead.

Liverpool, England. — Sir Edward Evans, brother of Alfred B. Evans, vice-president of the National Drug and Chemical Company of Canada, is dead. Sir Edward was a well known merchant of Liverpool as head of the firm of Evans; Sons, Lescher and Webb, Ltd. and was well known throughout the business life of Canada.

W. C. ALLEN GOING TO FRANCE

President of Yale & Towne Mfg. Co. Called Into U.S. Government Service

Mr. Walter C. Allen, president of the Yale & Towne Mfg. Co., has responded to the call of the United States Government for service in France. Mr. Allen expects to be commissioned as a Major in the Signal Corps, and to leave soon for France, to take up the duties assigned to him.

WALTER C. ALLEN
President of The Yale & Towne Mfg. Co.

"The executive management of the company's business will continue, as heretofore, in the hands of the Administrative Committee. During Mr. Allen's absence, the General Manager, E. C. Waldvogel, will serve as an acting member of the committee.

"The vice-presidents of the company are Schuyler Merritt and Joseph A. Horne.

PERSONAL

C. L. Jobb, general manager of Canadian Iron Corporation, was a recent visitor to Fort William, Ont.

W. A. Moody of Vancouver, B.C., representing Wood, Vallance and Leggatt, wholesale hardware merchants, was a recent visitor to Cranbrook, B.C. on business.

E. D. Reed, merchandising specialist of Hamilton, Ont., has been engaged by the F. F. Dalley Company as sales manager, to handle the new Stopglare automobile headlight lens.

C. W. Johnson, who was elected vice-president of the American Institute of Metals at its recent meeting at Boston, is general superintendent of the East Pittsburgh works of the Westinghouse Electric & Mfg. Co.

W. A. Bostwick has been elected president of the International Nickel Co., to succeed Ambrose Monell, who resigned to enter the Government service. R. C. Stanley was elected a member of the board of directors to fill the vacancy created by Mr. Monell's resignation.

Harry Bayne, of Hamilton, Ont., has been appointed by the Department of Trade and Commerce as supervisor of metals and fibres. His business is to ensure to Canadian industries a sufficient supply of these raw materials at a reasonable price. Mr. Bayne has a thorough knowledge of this work, having for many years been connected with the Westinghouse Company and the National Car Co., Hamilton.

INDUSTRIAL NOTES

Toronto.—Queen City Foundry has been succeeded by Bond Engineering Works.

Walkerville, Ont. — The Dominion Stamping Co. will build a forge shop to cost $16,000.

Vancouver.—The Ayres Varnish and Paint Co. will erect a new paint factory here at a cost of $2,000.

Toronto.—Empire Brush Co. has sold out to United Brush Co. of Hamilton, who will continue a branch.

Sydney, N.S.—A permit has been granted to the Sydney Foundry and Machine Co. to erect an addition to their foundry.

Weyburn, Sask.—The Potash Development Co. will investigate potash deposits in this district and if successful will instal a manufacturing plant.

Owen Sound.—Judgment for $8,061.72 for breach of contract has been awarded the Owen Sound Wire Fence Co., in their action against United States Steel Products Co.

Fort William.—Copp Stove Company will soon be able to continue shell contracts interrupted by fire some months ago. Repairs to the plant have been made and some new machinery has been installed.

NEW CANADIAN ENTERPRISE

The Dominion Battery Co., Ltd., 736 Dundas St. E., Toronto, is a new Canadian company in which Canadian capital has been invested for carrying on the manufacture of dry batteries, flash lights, etc.

The equipment, which, it is claimed, is complete, includes a magnetic separator for removing impurities from the manganese, thus tending to improve the quality of the product.

Those whose names are mentioned in connection with the company are C. W. Moody of Hamilton, Ont., and Jas. Dickson of the Dominion Power and Transmission Co. W. M. Turnley has been appointed manager with E. G. Fuller, factory superintendent. These two gentlemen, we understand, have had a wide experience in the manufacture of flashlights and batteries. The company has already arranged for representatives throughout Canada.

CORRECTION

Through a mistake in a mercantile report, an item was erroneously published in the October 13th issue of HARDWARE AND METAL to the effect that W. L. Haldimand & Son, hardware commission merchants of Montreal, had dissolved.

Mr. R. McK. Haldimand, senior member of the firm, died in August last, but the business is still being conducted under the old name of W. L. Haldimand & Son.

HARDWARE AND METAL regrets that this item should have been published, but the statement contained in the mercantile report most certainly appeared authoritative, and as such found its way into our columns. It is with pleasure HARDWARE AND METAL notes that the firm of W. L. Haldimand & Son still continues in business.

NEW CUSTOMS REGULATIONS

Iron ore, coke, pig iron and steel bars, shapes and plates purchased by the importer before September 25th, 1917, and exported to Canada on or after that date, may, upon presentation to the Collector of Customs of the required documentary proof of purchase, as above, be appraised at the following values:

Commodity	Basis	Price
Iron ore	Lower Lake ports, per gross ton.	$ 5.05
Coke	Connellsville, per net ton.....	6.00
Pig iron	Connellsville, per gross ton.....	33.00
Steel bars	Pittsburg, Chicago, per cwt...	2.90
Steel shapes	Pittsburg, Chicago, per cwt.	3.00
Steel plates	Pittsburg, Chicago, per cwt..	3.25

Such commodities purchased on and after September 25th, shall be dutiable at not less than the invoice value to the purchaser in Canada.

CELEBRATES 79th BIRTHDAY

"Many Happy Returns" have been showered on Mr. George Henry Millen, who celebrated his 79th birthday on Tuesday of this week. Mr. Millen has been associated with the E. B. Eddy Co., Ltd., manufacturers of wooden ware and matches at Hull, Que., for over 50 years and is now president and manager.

Mr. Millen was born in Glen's Falls, N.Y., coming to Hull at the age of 28 to repair and take charge of a saw mill which Mr. Eddy had rented. He was later made Superintendent and upon the incorporation of the company in 1886, was made a Director and Joint Manager.

From a small saw mill, Mr. Millen has seen the plant grow to its present magnitude, with 25 branches and 2,500 employees.

ST. JOHN, N.B., NEWS

Senator W. H. Thorne, president of W. H. Thorne & Co., Ltd., St. John, has accepted the appointment as chairman of the New Brunswick committee in charge of the Victory Loan campaign.

SENATOR W. H. THORNE.

Eugene Clarke, employed with T. McAvity & Sons, Ltd., St. John, before enlisting, has been reported seriously wounded in France.

J. M. Logan, of Hampton, N.B., has opened up at 18 Haymarket Square, St. John, and will make a specialty of stoves.

Francis Costley of the staff of The James Robertson Co., Ltd., who has enlisted in the 9th Siege Battery, was presented with a wrist watch by the manager, John Keefe, on behalf of the office and warehouse staff, before leaving.

WINNIPEG DEALERS AND CLERKS DINE

Hardware dealers and clerks held a dinner at the St. Charles Hotel, Winnipeg, on Monday, October 15, at which an address was given by A. L. Struthers, of the Struthers Business Institute.

The dinner was held under the auspices of the Retail Merchants' Association, hardware section, and C. C. Falconer, a prominent member of that organization, was in the chair. He explained that this was the first meeting, and it was hoped that many others would be held. The object was to get clerks and their employers together to talk over matters relating to the business.

Mr. Struthers delivered an address, which kept his audience interested to a late hour. He had not come to tell them of new stunts and ways of doing things, but to give them what he called "high brow stuff" relating to service.

Practically the whole of his address was based upon the achievements of a merchant in Western Canada, who had made a success of his business by studying first himself, second his customers, third his goods, and fourth the relation between himself and his customer regarding his goods. This man got down to fundamentals, and in these four respects made himself a better merchant.

After the address, Mr. Struthers gave instructions on how to approach the customer. Having shown his audience that each person required handling in a particular way, he proceeded to demonstrate how he would size up each man in the room. Naturally everybody was interested in these character studies. They went away better hardware clerks and better dealers for having heard Mr. Struthers.

Mr. George Ashdown, manager of the retail store of the J. H. Ashdown Hardware Co., and C. W. Byers, Western representative of HARDWARE AND METAL, also spoke during the evening.

STEEL CO. OF CANADA, LTD., FIVE-PIN TOURNAMENT

The Steel Co. of Canada's office staff recently held a very successful five-pin tournament at Saunders' Bowling Academy. Alex. McPherson with a fifty-pin handicap proved the winner, with G. Ross and T. Hodgson second and third respectively. H. Pennal's hook ball refused to hook, with disastrous results. Following are the scores:

	Name.	Handicap.	Total.
1st.	A. McPherson ..	50	559
2nd.	G. Ross	60	552
3rd.	T. Hodgson	30	528
4th.	J. Glenny	Scratch	521
5th.	H. Pennal	200	495
6th.	W. Hodgson	Scratch	419
7th.	Geo. Brown	175	401
8th.	Chas. Knott	50	375
9th.	O. E. Henry	125	374

HARDWARE LETTER BOX

PREMIER OAK STOVE

F. C. Bishop, Norwich, Ont.—Kindly advise the name of the firm making the Premier Oak Stove.

Can any of our readers supply this information?—Editor.

REPAIRS FOR KIR BEN HOT AIR FURNACE

H. Stainton, Ltd., Toronto.—Could you advise us where we can get repairs for the Kir Ben Hot Air Furnace?

McIntyre & Taylor, Ltd., 501 Queen St. W., Toronto.—Editor.

THE CLERKS' DEPARTMENT

THE RAPID RISE OF "HURRY-UP" HURLEY

Chairman of United States Shipping Board Who Rose from Railroad Engineer to Millionaire Manufacturer in Fifteen Years.

"Hurry-Up" Hurley is the name which Edward Nash Hurley has made for himself in Washington. The Chairman of the United States Shipping Board has had a remarkable career. To-day a millionaire manufacturer and in charge of the American shipbuilding program, he was a locomotive engineer fifteen years ago. Three years ago he was summoned from Illinois by President Wilson to sit on the Federal Trade Commission when that body was organized in 1915 and since then he has done much to put the Stars and Stripes into ports where it has not fluttered since the United States merchant marine started to dwindle years ago. The following sketch is from The World's Work:

Twenty-nine years ago, the man who is now chairman of the Federal Shipping Board—considered one of the most important, if not the most important branch of the Government to-day—was wearing blue overalls and a greasy shirt with collar attached, minus a necktie. That was on the cab of a locomotive switch engine in Chicago. Mr. Hurley got $35 a month for his work there. He says that $35 was big money to him in those days. Just fifteen years later Hurley was a millionaire and had retired at the age of thirty-nine years.

Mr. Hurley came from Galesburg, Ill. He was born there July 31, 1864. Inheriting the rugged body of his father, who was a general utility man in the Burlington railroad shops, Hurley was attracted to work on a farm during vacation periods of the Galesburg public school he attended. Besides his wonderful health and vigor which have stood him so well since, Hurley got $8 per month for this farm work.

When fourteen years old Hurley believed he had sufficient education and sufficient play; so he entered the Burlington yards at Galesburg. Robert W. Colville, master mechanic at the C.B. & Q. yards, gave Hurley his first real job. He spent two years at the job and decided he could do better elsewhere. Having worked some extra time, he got $36 for his last month's work. He gave his mother $30, kissed her good-bye, and with six one-dollar bills rustling in his jeans, started toward Chicago to become a millionaire. He did not have to pay his railroad fare to Chicago, so a thirty-cent breakfast he had in Aurora the next morning left him with $5.70 when he got a place on a switch engine. Twenty-six months later, at nineteen, he was one of the youngest engineers on the whole Burlington road, in charge of an engine on a suburban run between Chicago and Aurora. Mr. Hurley says the training he received in cleanliness and orderliness while helping his mother about the kitchen in his kid days was one of the big elements in getting him this promotion.

The nearest Hurley, the engineer, ever came to an accident was one dismal, foggy morning as he was taking his passenger train into a long switch on Western Avenue. As Hurley drove his engine in sight of the siding he saw that a freight had just cleared it and was running up on the switch. As Hurley's train crossed in, he suddenly was shocked into momentary numbness to see that the freight train was pulling on to the main line over a switch that connected with the siding about half way down. Let Hurley tell the rest.

"It's a fine thing to talk about dying at the post," Mr. Hurley said as he smiled reminiscently. "I believe it's a lot better, however, for a man to do his whole duty and get away with a whole skin. In this instance, I did the former but failed of the latter.

"I quickly realized there was only one thing on earth to do—shut off steam, throw in the sand, and set the brakes. I did this, told the fireman to jump, and wasn't much behind him when he landed.

"I struck feet first, pitched forward on my hands, and plowed up several feet of the hardest cinders I have ever come in contact with. Those cinders ripped considerable cuticle from my hands and filled my eyes. I raised my hands to wipe the dirt from my face and left great smears of blood from forehead to chin. When passengers and the rest of the train crew ran up they saw me covered with blood and lauded me for sticking to my post and saving the passengers! It was some years before I ever told any one I had jumped."

Railroading on the Burlington

Mr. Hurley put in nearly four years and a half on the Burlington. When he "went out" with the Brotherhood in the historic strike of '88, he left the Burlington for all time. After the strike he became secretary to P. M. Arthur, of the Brotherhood, with offices in the Grand Pacific Hotel. From that position he went back to railroading, as passenger engineer on the Santa Fe. He put in three days when a committee from the Brotherhood told him it was not altogether right that he should go back to so strenuous a job so soon after leaving a desk job. Hurley said he was so glad to quit he never even asked the Santa Fe for the three days' pay. The Santa Fe still owes him the money.

It was at this point in his career that Mr. Hurley ventured into politics. His venture was short-lived. He says he has since this brief venture confined his politics to casting votes at elections. He made a dismal failure as an embryo politician and admits it with a smile. The story of his one failure is brief.

Mr. Hurley was interested in a certain candidate in an approaching election. Voluntarily he set out collecting campaign contributions. He collected $50, all from then Collector of Customs Stone. He turned it into headquarters, but it wasn't used, so it was returned to Mr. Hurley after the election—much to his surprise. There was a surprise due to Stone also when Mr. Hurley took the $50 back to him. Stone was so surprised at this unusual procedure that he gave Hurley a position as deputy collector of customs, which he held from December 1, 1888, to January 1, 1890. He resigned to become chief engineer of the Cook County Insane Asylum, a post he had expected to get because of his political work. However, he did not keep the place long. He grew weary quickly of the politics he was supposed to play, and resigned to "go to work."

His next work was as representative in the West for a firm that made metallic packing for valves and pistons. The salary was $100 per month. It was in this position that he "found himself."

Inventions in Pneumatics.

He had long been interested in the application of the pneumatic principle to tools. Spending his spare time tinkering, he one day perfected a pneumatic bell-ringer. After that came a pneumatic sander for tracks, and a pneumatic hammer. For them Mr. Hurley got only $25 a month increase in his salary. Other inventions which he turned over to the firm in the course of time got him an increase to $300 per month.

Then Mr. Hurley invented a pneumatic blow-off cock for throwing dirt and sediment out of locomotive boilers. He asked his firm to hear a proposition. The proposition was that he would turn the invention over to the firm, which would make a profit of $5 on every one sold, and Mr. Hurley would receive a royalty of $1 on every one sold.

"The firm couldn't see the proposition in any light," said Mr. Hurley grimly. "They insisted that I had perfected the thing while employed by them and that it was theirs, not mine. They even refused to raise my salary; that was also completely out of the question.

"Now, mind you, I had done more than the average employee. I had crawled under engines and had worked all hours of the day and night. When I went out to sell packing and it was slow making a customer see the advantage of my goods. I hammered packings into place to put my arguments across—and they usually went across when I did that. There were not fifteen locomotives west of Cleveland that used our packing when I started in with that firm. At the time I made them my proposition in 1897, after five years of service, there were not fifteen engines that did not have the packing.

"It was the turning down of that pro-

position that started me out in business for myself."

Mr. Hurley's business start was "ragged" as he puts it. There were himself and two expert machinists. They began in a barn. Three months later the first pneumatic boring machine was put on the market, and Hurley was made.

April 1, 1898, Mr. Hurley opened the office of the Standard Pneumatic Tube Company of Chicago with a capital of $50,000. He had mortgaged nearly everything he had to start. The first year the company made $7,500, which was what a 15 per cent. dividend amounted to.

Making a Million.

A year later the Standard company's profits were $33,000. In 1900 they totalled $90,000. Three years after the company was organized the profits reached nearly $150,000, and in February, 1902, it sold out to its only competitor at a price that made thirty-eight-year-old Edward Nash Hurley a millionaire.

The sale of the property was attended by an unusual incident. Mr. Hurley took his tools to London to show them off. They "acted well," but the Englishmen were not quite satisfied. Therefore, Mr. Hurley took out a set of the English tools and put them through the same paces he had just put his own through. The sale was clinched. The papers were drawn up and signed. By the sale contract, Mr. Hurley got, besides a cash payment of $30,000 which he cabled to his wife instead of trusting it any other way, a large block of stock in the English concern. Long afterward, he discovered an error in the drawing up of the papers which, technically, made the contract absolutely worthless. But to the credit of the Englishmen, they set the matter straight.

Mr. Hurley to-day is as young as he was twenty years ago. He is blunt and forceful. He is teeming with energy and, while driving himself, also drives every one who comes in contact with him, but withal he is tolerant of other viewpoints than his own. He is heavy set, and still shows signs, both in dress and appearance otherwise, of the wholesome, out-of-doors life and work he did when engineering. His hands are thick and his fingers stubby. When he signs his name to shipping contracts his pen frequently tears the paper. He can't use a fountain pen. They are too frail for those burly hands. The pen points he does use wear out quickly. One pen lasts him little more than a week. His forcefulness is too much for them.

Mr. Hurley's knowledge of shipping is small—or rather it was small when he started. He learns quickly—and thoroughly. He tells the following on himself:

"No, I have not had much experience with things that float. My only experience in that line until I took the chairmanship of the Federal Shipping Board was with a tub on Cedar Fork Creek. Cedar Fork Creek runs through Galesburg and under the streets for several blocks, making it a wonderful subterranean river for youngsters to explore in spare moments. I have sailed many an ordinary wash tub through that tunnel with the other boys of the town."

Western Prosperity Boosts Trade

President A. E. Gilverson of Rice Lewis & Sons, Ltd., Describes Western Conditions—Auto Accessories Big Factor in Hardware Trade—Jobbers Soon to Control Accessory Field.

PRESIDENT A. E. Gilverson of Rice Lewis & Sons, Ltd., Toronto, Ont., has recently returned from a trip through Western Canada to the Pacific Coast and brings back with him glowing reports of general conditions throughout the vast grain country and the coastal districts.

Mr. Gilverson's trip was primarily designed as a pleasure trip though he interested himself to some extent in the agricultural phases of the situation and also in the shipbuilding industry at the coast, both in the United States and in Canada. With very few exceptions he paid little attention to the hardware interests and is therefore unable to go into any details of the trade throughout the West, though he is of the opinion that the generally prosperous conditions brought about by the bountiful grain crop and high prices will be reflected in general business and trade conditions.

Mr. Gilverson describes the general spirit of the West in the statement that the "people are taking heart." He points out that whereas the farmers, particularly of the prairie provinces, have of late years been rather pessimistic over the general outlook, they are now encouraged by the measure of prosperity which is theirs and greater things may be expected in the future. Mr. Gilverson states that in his opinion the buying power of the western farmer is to-day nearly double what it was a year ago. Much of the vast tracts of land sold during the Western land boom still remain dormant, and Mr. Gilverson states that throughout the country, even to the coast, large subdivisions may be seen with paved streets and automobile driveways while not a house can be seen in sight. This state of affairs naturally increases tremendously improvement taxes, and strains municipal finances, but Mr. Gilverson states that the western farmer is paying off his mortgages with the money coming to him and then generally invests in an automobile.

The automobile fever has spread so much through the western provinces, that the visitor from the east is surprised with the conditions. Mr. Gilverson visited several small towns on the prairie and states that former blacksmith shops are now garages and that practically every farmer has his little "tin box" garage. While he did not investigate the situation closely Mr. Gilverson states that the boom times being experienced by the automobile industry in the West are bound to be reflected in the hardware trade in connection with the sale of automobile accessories. In addition, he is of the opinion that the wider adaptation of the automobile into the life of the West will do much to improve commercial conditions in years to come.

Mr. Gilverson is of the opinion that it will not be long until the hardware jobbers of the country control the accessory business as is the case in the United States. In Canada there is considerable opposition to this by the specialty firms and garages, but it is expected that this opposition will be overcome and the automobile accessory trade will be absorbed into the hardware business as a logical step.

The building of large numbers of steel and wooden ships on the Pacific Coast in the United States and Canada was also reported by Mr. Gilverson. He states that the great problem being faced is a shortage of labor, and that the situation is rendered more acute by the application of conscription in both countries.

Mr. Gilverson describes the West as a "great country," full of unbounded possibilities, and he expects that it will not be long until the general prosperity indicated in his words to the effect that the western farmer "has money to burn," will be reflected through business, and have an important effect upon the hardware trade.

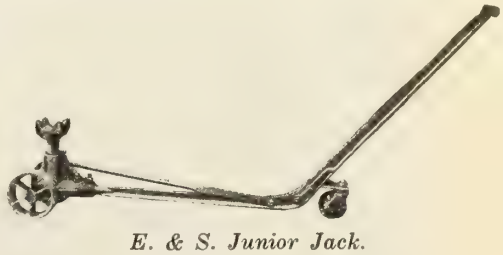
U.S. EXPORTS DYES

The American dye industry has not only grown big enough to supply practically all domestic needs, but is now exporting important quantities to other nations. In a recent month nearly $500,000 worth of aniline dyes was shipped abroad. This is the first time that any separate statistics for aniline export have been issued by the United States Department of Commerce, and is the result of the recent striking growth of the trade.

NEW HARDWARE GOODS

(Continued from page 35.)

larger type of Jacks manufactured by this company but is simpler in construction. The post adjustment is made by hand, and allows of an elevation of 15 inches. The diameter of the wheels is



E. & S. Junior Jack.

6½ inches, the jack weighs 60 lbs. and is claimed to be made of the best iron and steel obtainable. It is claimed that the Jack is a big advantage in both public and private garages.

What Hardwaremen are Doing

Notes of Hardware Advertising Appearing Throughout Canada — Some Cases of Glaring Unseasonableness Unearthed—Stoves, Sporting Goods, Shaving Utensils and Accessories Featured.

"Get Your Stoves Ready for a Winter's Work," says an advertisement by the ERICKSON HARDWARE CO., LTD., BIGGAR, SASK., continuing as follows: "It is better to have a heater that is too large than one that is too small. The larger the heater the more distribution of the heat you will get from fuel used and the less fuel you will require because a large body of fuel burns more slowly and burns up cleaner than a small body of fuel. In a stove too small you have to force the fire too much, and this takes more fuel and also tends to burn out grates and fire pot. Let us help you find the right heater for your home. We have hard coal, soft coal, and wood heaters in stock, a thoroughly good line at moderate prices."

A sale of shaving utensils was recently advertised by the ASHDOWN HARDWARE, WINNIPEG, MAN. "You Men—who want real shaving comfort," says the advertisement, continuing, "Just bring your shaving trouble to us—we can prescribe the proper treatment, the proper razor, the proper brush, and, if necessary, the proper hone and brush. Such a big assortment to choose from makes your shopping easy." Hollow ground razors in all width of blade with round or square points were quoted from $1.50 to $3.00; safety razors of several makes were advertised, and shaving brushes, strops, hones, blades, soaps, creams, powders were quoted.

In a panel in the same advertisement appeared the following list of articles under the heading "Things Unusual for a Hardware Store, but They're Here." These included fountain pens, white enamel beds, springs and mattresses, watches, alarm clocks, trunks and bags, graf-onolas, records and cameras.

"Everything you require for the hunting season may be obtained of us, from fish hooks to ammunition, shot guns and rifles," says an advertisement by W. J. MUIRHEAD, HARDWARE, CARLETON PLACE, ONT., under the heading of "Sporting Goods."

"Any Chills in your Home?" is the query asked by a recent stove advertisement by RICHMOND HILL HARDWARE CO., RICHMOND HILL, ONT. "You can make that living room, bed room, dining room, or bath room warm and comfortable during the chilly fall weather by using a ——— oil heater. They are easy to operate, no smoke, no smell, can be carried from one room to another as desired."

"Buy a ——— stove," says an advertisement by J. R. MYERS & SONS, LTD.. STRATFORD, ONT., continuing as follows: "The ——— stove is an exceptionally popular and efficient heater. Its beauty, smooth, clean-cut castings with finest nickel trimmings, combined with its great radiating power, its weight and lasting qualities, secures for it the recommendation and good-will of every careful buyer."

WHYTE & ORR, HARDWARE, DAYSLAND, ALTA., recently featured the sale of automobile headlight lenses. "If you have an Automobile," says an advertisement, "don't forget that plain glass in your headlights is against the law. A glass that prevents the blinding glare of the light is now required. We can outfit you with the proper glasses for your lights on short notice. The cost is only $2.25 so don't run any chances of getting into trouble but call on us and get your lamps fixed up at once."

Gasoline lamps were also featured as "the nights are getting longer."

Under the heading "Helps for Your Home and the Farm," an advertisement by H. E. MOORE HARDWARE, OAKVILLE, ONT., says "There are lots of little inexpensive things that earn many times their cost by preventing backaches and tired muscles. Do not make your task more irksome than it need be. Come to us for suggestions." Chair seats, ice chisels, harvest gloves, mops, mop holders, electric irons, dust pans, step ladders, potato drags and scrub brushes were featured.

Sporting Goods were recently featured in advertising by INGRAM & DAVEY, LTD., ST. THOMAS, ONT. Under the heading "St. Thomas' Great Sporting Goods Store," the advertisement says "It is Time To Go Hunting. Our Stock of Hunting Goods is complete in every detail. You will find in our Sporting Goods department all the leading makes of shotguns and rifles in all the popular gauges and calibres." Canvas and leather cases, cravenette, canvas shooting coats, hunting knives, ammunition, etc., were featured.

UNSEASONABLE ADVERTISING

The importance of using only seasonable advertising has received much emphasis in connection with the reports on "What Hardwaremen Are Doing" in HARDWARE AND METAL recently, and the attention of merchants has been drawn to particular cases where this big factor in good advertising is evident. We will herewith draw the attention of hardware dealers to three cases of gross unseasonableness in advertising which recently appeared and which renders the value of the ads. practically nil.

One hardware merchant of Manitoba advertises automobile oil under the bold heading "For the Hot Weather" in a local newspaper published on October 11. The border of the ad. conveys the impression of icicles and cold weather, but it continues "it just suits the cars in hot weather."

Another merchant in an Ontario town recently advertised "We can supply your Spring Wants at Reasonable Prices" on October 3, and proceeded to quote prices on screen doors, screen windows, lawn mowers, garden tools, etc.

The third case was that of a hardware merchant also located in an Ontario town of good size. Under date of October 11, the advertisement announces a sale of "Garden Tools" and proceeds as follows: "Good tools are as necessary in successful gardening as good soil and seeds. In our store you will find a full line of the best garden tools on the market."

The lines featured in these three cases are distinctively Spring and Summer goods and have no place in advertisements appearing in the month of October. Their effectiveness is lost by unseasonableness and should not be occupying newspaper space when the hardware merchant has many Fall and Winter lines on his shelves waiting to be moved.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

AGAIN the trend of the market in hardware commodities has been upward. Price changes have been quite numerous and advances on such articles as hob and Hungarian nails, lamp wick, stove wick, cutting pliers, flat nose pliers, raisin seeders, pipe cutters, cutlery, malleable screw clamps, brass rules, putty knives, radiator cement, soldering furnaces, gas pliers, revolving belt punches and glasses for oilers. There has been a weaker tendency in black sheets during the week, in the Toronto market in particular, where lower quotations were made by a number of dealers. The linseed oil market gives evidence of firmness during the week due to advances in flaxseed. The market for future linseed oil seems fraught with a number of possibilities which may work out toward a movement either upward or downward. Turpentine was higher during the week, following a firm condition in the primary market. Declines were recorded in lead pipe and lead waste pipe as a result of the lower quotations in the primary market on pig lead. There has been a decidedly weaker tone to the pig lead market and the sagging tendency seems not to have been arrested as yet. Other ingot metals held in a steady position. Old materials are in quiet market due to lack of demand from mills. Shipments of winter lines are now going forward and business in the wholesale hardware trade is reported good to brisk.

MONTREAL MARKETS

MONTREAL, Oct. 24.—Amongst the most decided market tendencies of the week is the weaker tone to white lead in oil. This is a factor of interest to the hardware trade over a wide field, and has been predicted very definitely in HARDWARE AND METAL. In other directions there is interest this week also. Old materials are in decidedly weaker market. Iron and steel are stationary as to quotations. Nails and wire are also quiescent. Sheets, plates, iron pipe, and boiler tubes are in very difficult market conditions as to supply. Makers of stoves and ranges are waiting still for news of 1918 prices affecting their trade from the United States. Shelf goods show no changes of note this week, but in the heavies there are one or two changes, one a decline in straw sheeting, dry and tarred, which interests the market at this time especially. Lead pipe is also lower this week, due to the weakness of the ingot metal.

Some Changes In Heavies Lists

Montreal.

SHELF GOODS AND HEAVIES.—There are no notes of interest to record this week from the shelf goods change lists, the manufacturers having given the change-list men a rest in all quarters of the wholesale hardware trade locally, but in the heavies some changes have been notified.

Navy Oakum Advanced

A 10 per cent. increase in the price of navy oakum is announced, the quotation per 100 pounds for this being now $21.50.

Dry Straw Sheeting Down

In heavy dry straw sheeting a decline is recorded. The cost of this line is now $2.90 per 100 pounds to the retail trade.

Dry Tarred Sheeting Also Down

Although tar has advanced, and paper materials are firm, heavy dry tarred sheeting is also down a shade to $2.90 per 100 pounds. The declines in this material are said to be due to factors other than declines in raw materials, and may stimulate demand.

Iron Pipe And Boiler Tubes Scarce

Montreal.

IRON PIPE.—The market condition, described some weeks ago as to shortage of iron pipe of four inches in size and larger, has become more acute than ever. Manufacturers are unable to quote for large quantities of this size of pipe and larger until they discover that they can get supplies of the strip from which to make it. Quotations are liable to be higher than the nominal prices quoted previously, and given in current quotations at the end of this newspaper. The shortage of boiler tubes is also acute, and is giving rise to serious concern.

Nails And Wire In Unaltered Market

Montreal.

NAILS AND WIRE.—No change falls to be recorded as to nails and wire this week. The market is strong as ever, and demand is reported good. Standard steel wire nails are quoted at $5.50 base per 100 pounds, and cut nails $5.75. Wire is still at $6.50 base per 100 pounds as last week.

Iron And Steel Still Steady

Montreal.

IRON AND STEEL.—No changes in the quotations for iron and steel, as usually required by the hardware trade, are announced this week from any quarter. The market is firm, and is watched warily by all those foreseeing demand in any special direction. Demand is steady, and it is hard to secure delivery of supplies. There is no special feature to record as regards local conditions, and the great factors affecting the situation remain without marked change for the time being.

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 18-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Shortage Of Sheet Metals Serious

Montreal.

SHEETS AND PLATES.—There is no improvement in the situation as regards sheets and plates. Tinned iron is almost unobtainable even from large firms. Canada plates are still to be found, but are scarcer than ever. It is hard to discover anywhere even the last remnant of stocks of the sheets and plates formerly imported from Great Britain, and no hope is held out that there will be any resumption of export of metal goods such as these for a long time from now.

Galvanized sheets remain steady, and the expected easier market for these has not developed yet. All the heavier sizes of black sheets are scarce and high priced, and the scarcity of boiler plate is most marked.

MONTREAL—	100 lbs.
10 gauge	$12 50
12 gauge	12 60
14 gauge	11 15
16 gauge	11 25
18-20 gauge	11 30
20-22 gauge	11 35
26 gauge	11 40
28 gauge	11 50

Stove And Heater Market Unchanged

Montreal.

STOVES, RANGES, ETC.—Manufacturers of stoves who have been awaiting the announcement of prices on various steel and iron products required in their industry for the coming year had received no intimation on the subject from the United States at the date of writing. The market for stoves, ranges, and heaters is in the same condition as described last week—that is, active for all lines of heaters and some moderate-priced stoves and ranges, and a little slow as to demand for the ranges of higher price. In general, however, business conditions are reported satisfactory. In galvanized and enameled ware the shortages of sheet metal are regarded with concern, but have so far not seriously affected production, and prices remain unaltered.

Coal Oil And Gasoline Steady

Montreal.

GASOLINE, ETC.—The market for gasoline keeps at the levels of the past weeks without alteration upwards, though the tone is always firm for this product. The quotation 32½c is still maintained for gasoline per Imperial gallon to the retail trade, and for coal oil, Royalite 17c, and Palacine 20c per Imperial gallon is charged. There is always a good deal of interest expressed in the crude oil market, as this affects the market for gasoline in Montreal directly, and the transportation of the crude oil to Montreal may cause shortage and firmness of market should this be interrupted. For the present, however, matters are as last week.

Rope Market Keeps Steady And Firm

Montreal.

ROPE AND CORDAGE.—The market condition as to cordage is still firm and with prospects of advanced prices. Demand is not more active than was mentioned last week, but is steady and satisfactory, with every indication of being still brisker as need for nautical rope supplies arises following the rapid development of the shipbuilding industry in Canada. There is still concern as to the securing of supplies of Manila and the other hemps, and sisal supplies are also as uncertain as ever. For the present, however, no hint of advancing prices is given beyond the obvious facts of the situation, which may bring about a firmer condition of market with very little warning.

Lead Products Again Lower

Montreal.

LEAD PRODUCTS.—Last week's report on these products in HARDWARE AND METAL mentioned "a very strong possibility that the lead products may be lower yet." The indication of the state of the market given has proved accurate, and lead products are down again this week. This is due to the weakness of the market for lead in the ingot, and also to the quietness of demand for lead products as compared to former experience, when construction work was going rapidly ahead, with improvements of property calling for new installations of plumbing. Quotations are as under:

MONTREAL—	
Lead pipe, lb.	$0.16
Lead waste pipe, lb.	0 17
Lead traps and bends	20% on list
Lead wool, lb.	0 16
Lead sheets, 3 lbs. sq. ft.	0 14¾
Lead sheets, 3½ lbs. sq. ft.	0 14¾
Lead sheets, 4 to 6 lbs. sq. ft.	0 15

Old Metals Are In Weak Market

Montreal.

OLD MATERIALS.—Dull market and an almost general decline are the conditions reported this week in the old metal and materials market. The reasons given for the weakness apparent are that the United States conditions have unsettled the market, and demand is not active. Tea lead is down to 4c, a decline of 2c a pound. Heavy lead pipe is down a cent to 6c. Yellow brass is weaker also. Light brass is a cent lower than last week. Heavy copper has declined to the extent of losing its higher quotation of last week's range. Similarly with old cast iron and heavy melting steel. The rubber materials also are lower in price this week by half a cent for all except auto tires. Hints of an expected recovery for the old metals have been heard here and there, but the condition is very uncertain.

MONTREAL—		
Tea lead	$ 0 04	....
Heavy lead pipe	0 06	....
Yellow brass	0 14	....
Red brass	0 20	0 21
Light brass	0 08	....
Scrap zinc	0 06	....
Heavy copper	0 22	....
Old cast iron, per gross ton	25 00	....
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy melting steel	20 00	....
Pipe scrap	15 00	17 00
Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 08	....
Overshoes, lumbermen's rubbers boots	0 06	....
Bicycle tires	0 03	....
Auto tires	0 05½	....

Copper And Tin A Shade Firmer

Montreal.

INGOT METALS.—In most of the ingot metals a weaker tone is noted, but tin is in better demand and copper is a little firmer. The market is still very much influenced by uncertainties across the border.

TIN.—More demand was observed for tin this week, and the market for this metal is a little firmer at 65½c to 66c.

COPPER.—There is really no main market for copper while U. S. affairs are as at present, but those who have been disposing of any in Montreal have been quoting around 33c to 34c for casting copper.

LEAD.—Lead is still weaker, and the quotations made this week are 10c to 10½c.

SPELTER.—From 10½c to 11½c for spelter are the quotations this week, the metal being in a shade easier market.

ANTIMONY.—Antimony is a shade easier again, and is quoted at from 17c to 18c. Demand is not very active.

ALUMINUM.—There is a weaker market for aluminum, and a drop of quite 5c is noted as against last week's figures. The quotation given as representative is 60c.

TORONTO MARKETS

TORONTO, Oct. 25.—There has been a steadily upward tendency in the majority of changes that have taken place in prices of hardware commodities. The list has been quite numerous and comprises such lines as stove and lamp wick, hob and Hungarian nails, pliers, raisin seeders, pipe cutters, cutlery, malleable screw clamps, brass rules, plumb and level rules, putty knives, radiator cement, gasoline soldering furnaces, belt punches, glasses for oilers. Business is reported very good. Winter lines are in good demand now, furnace scoops being one of the big sellers. Snow shovels, which were booked some time ago, are now being delivered on contracts in preparation for winter trade. Readjustments have been made in the price of plain galvanized wire and coil spring wire.

Stove Wick And Lamp Wick Advance

Toronto.

WICK. — Following the advances recorded in various lines of cotton goods last week, including cotton twine, sash cord, cotton duck, cotton rope, awning cord, cotton clothes-lines there have been further advances in stove wick and lamp wick. Flat stove wick 3-inch is now quoted at $4.50 per gross, 3½-inch at $5.25 per gross, 4-inch at $6.25 per gross, 4¼-inch to 4½-inch at $7 and 5-inch at $8 per gross. Lamp wick on cards of 32 yards is quoted as follows: A, 75c per card; B, $1.10 per card; D, $1.75 per card. The increase amounts to approximately 5 per cent.

Hob And Hungarian Nails Up $2 On List

Toronto.

HOB NAILS.—An advance of $2 per hundred pounds was made effective during the week on hob and Hungarian nails. For Nos. 11, 12 and 13 gauge and heavier, ⅜-inch and shorter are now quoted at $17.40, and three-and-one-half eighths and longer at $16.90 for same gauges. No. 14 gauge, ⅜ inch and shorter are quoted

at $18.50, and three-and-one-half eighths and longer of same gauge at $18. For No. 15 gauge, ⅜ inch and shorter the price is $19.30, and three-and-one-half eighths and longer of No. 15 gauge at $18.80. Above prices apply to one-pound papers. If in bulk the prices are 50c per hundred pounds less.

Pliers Make An Advance Of 15%

Toronto.

PLIERS. — An advance of approximately 15 per cent. has been made effective on Bernard and Lodi pliers of various kinds. Bernard cutting pliers 4½-inch are now quoted from $14.20 to $14.80 per dozen, 5½-inch from $18 to $18.65, and 6½-inch from $21.60 to $22.50, 8-inch at $28.80. Lodi 4½-inch are quoted at $1.15 per dozen, 5-inch at $1.35, and 6-inch at $1.80 per dozen. Electrician No. 112 x 8-inch are quoted at $36 per dozen, and Elm City fence pliers No. 1 at $11.20, and No. 10 at $15.55 per dozen. Flat-nose pliers No. 300 by 4-inch are quoted at 95c per dozen, 4½-inch at $1.20 per dozen, 5-inch at $1.40 per dozen, 5½-inch at $1.55 per dozen. Paragon cutting pliers are quoted at $6.70 per dozen, and Lodi cutting pliers at $2.90 per dozen. Paragon gas pliers are quoted at $5.70 per dozen.

Raisin Seeders And Pipe Cutters Up

Toronto.

SEEDERS, PIPE CUTTERS.—Higher prices amounting to 10 per cent. were put into effect on Crown raisin seeders, making the price of No. 4 size now $14.95 per dozen. Enterprise raisin seeders, No. 36, are now quoted at $18.75 per dozen. Saunders pipe cutters have also been moved higher in price, No. 1 now being quoted at $2.15 each and No. 2 at $3.20 each. Barnes pipe cutter No. 1 has been advanced to $2.70 and No. 2 to $3.55 each. This is an increase in pipe cutters of 12½ per cent.

Higher Prices On Table Cutlery

Toronto.

TABLE CUTLERY.—An advance has been put into effect by wholesalers on Rogers 1847 table cutlery. Round handle dessert knives are now quoted at $4.50 per dozen, while the round handle dinner knives are quoted at $4.75 per dozen. In sets of half dozen each of knives and forks these lines are quoted at $4.50 per set.

Malleable Screw Clamps Go Higher

Toronto.

CLAMPS. — An advance of approximately 10 per cent. has been made effective on malleable screw clamps which now makes the price on the 4-inch $7.60 per dozen, 6-inch at $11.75 per dozen, 8-inch at $18.50 per dozen and 10-inch at $25.20 per dozen. This is the first advance to be recorded in this line in some weeks past and indicates that iron and steel commodities in certain instances at least have not yet reached the peak load.

Readjustment In Plain Galvanized Wire

Toronto.

WIRE, NAILS.—Slight readjustments have been recorded in the price of plain galvanized wire. In some of the various gauges an advance has been made effective, while in others a slight decline has been recorded. Plain galvanized Nos. 6, 7 and 8 is now quoted at $6.80 per hundred pounds, No. 9 at $5.65, No. 10 at $6.75, No. 11 at $6.85, No. 12 at $5.95, No. 13 at $6, No. 14 at $7.15, No. 15 at $7.65, No. 16 at $7.80 and No. 18 at $8.70. No. 9 coil spring is quoted at $5.85, and No. 12 coil spring at $6. Barbed wire is again quoted at $6. Other wire products remain unchanged during the week, the base price of smooth steel wire being $6.50 per hundred pounds. Standard steel wire nails are still quoted at $5.45 per hundred pounds in the majority of instances. Cut nails are quoted at $5.80 base.

Brass Rules And Plumb And Level Rules Up

Toronto.

RULES. — Higher prices have been made effective in certain classes of measuring rules. Rabone brass rules are now quoted from $3.60 to $4.60 per dozen, plumb and level rules at $6.30 per dozen, and blindman's rule at $5 per dozen. While ingot brass and copper have been at high levels for some time the advance in the manufactured product has not reached the finished product until the present in some instances. Ingot copper has even started to recede in the primary market from the high point due to the fixing of prices by the United States Government, but this has not yet had an opportunity to affect the finished products.

Putty Knives Show Upward Tendency

Toronto.

PUTTY KNIVES.—Following the lead in the case of other lines of manufactured articles, putty knives have this week been moved to higher levels for the various styles of square, spear and skew point, the new price now being $1.80 per dozen for 4-inch. For the Humphreys putty knives 4-inch and 4½-inch are now quoted at $2.60 per dozen, also for the square, spear and skew point.

Radiator Cement And Soldering Furnaces Up

Toronto.

CEMENT, SOLDERING FURNACES. —Increases have been put into effect in radiator cement and gasoline soldering furnaces. Neverleak cement in 50c size is now quoted at $4.05 per dozen and 75c size at $6.05 per dozen. Gasoline soldering furnaces have been advanced to $11.50 each. Now that furnaces have again been started for the winter radiator cement will no doubt be in demand to make necessary repairs.

Furnace Scoops Having Good Sale

Toronto.

SPADES AND SHOVELS.—There is a good demand reported at the present time for furnace scoops. With the coming of the winter season and the necessity for shoveling coal the reason for this demand is obvious. Special furnace scoops are quoted at $7.90 per dozen. There is some booking business on spades and shovels at open prices being made at the present time, but very little sorting business is being done. Plain black shovels, Jones, Olds and Crescent are being quoted at 30 per cent. for first grade, 20 and 2½ per cent. on second grade and 5 per cent. for fourth grade. Snow shovels are now being delivered on contracts that have been booked for some months. New business on this line of goods is quoted at $7 per dozen long handle socket. The season is rapidly approaching when snow shovels should again be in demand.

Extra Glasses For Oilers Have Advanced

Toronto.

OILERS.—Following the advance recorded last week on coppered steel oilers the extra glasses for oilers have this week been advanced in price. No. 0 is now quoted at 11c each, No. 1 at 13c each, No. 2 at 15c each, No. 3 at 16c each, No. 4 at 20c each. Advances in glass products have recently been announced by the manufacturers in the United States.

Factory Milk Cans, Railroad Cans Higher

Toronto.

MILK CANS.—An increase in price has been made effective in factory milk cans, railroad cans, cream cans and milk can trimmings through the changes in the discounts on these commodities. Factory milk cans are now quoted at list plus 30 per cent. Milk can trimmings are quoted at list plus 60 per cent., the former discount being list plus 50 per cent. Cream cans are now quoted at list plus 20 per cent., the former discount being list plus 10 per cent. Railroad milk cans, formerly quoted at net list, are now quoted at list plus 10 per cent. Other lines of tinware remain unchanged.

Bigger Business For Rope For Shipbuilding

Toronto.

ROPE, TWINE.—Now that the shipbuilding industry in Canada is getting nicely under way there are indications that bigger business in rope will soon be forthcoming. In the Maritime Provinces there is increased activity with the possibility that heavier supplies will be called for in the near future through the contractors on the various ships that are now either in the course of construction or about to be constructed. In the Toronto shipyards new ships have recently been complete and others are under way which will mean a good demand for rope. Prices for rope remain unchanged from those of last week, and in a firm position. Sorting business on rope is quiet for the domestic

trade at the present time. Small twines, however, are in good demand and business will possibly increase in volume from this time until after the Christmas season is over. Prices of cordage will be found in current quotations.

Stoves Continue In Good Demand

Toronto.

STOVES, ENAMELWARE.—Orders for stoves continue to go out as fast as manufacturers can supply them. Shipments have already been heavy in anticipation of a good fall business. From the districts where wood can be secured there has recently developed a good demand for wood stoves as there is anticipation in these quarters that there may again be difficulty in getting supplies of coal this winter. Enamelware remains unchanged at the quotations of last week.

Coal Oil In Bigger Demand Than Ever

Toronto.

GASOLINE, COAL OIL. — With the large numbers of coal oil heaters that have been sold recently there has been created a heavy demand for coal oil. A new device has recently been placed on the market in the shape of a coal oil burner for attachment to a coal range which gives promise of utilizing still greater quantities of coal oil. Experiments are also being made to adapt this burner to a furnace for heating a house hot water system. Gasoline prices held steady during the week at 31½c to 32c per Imperial gallon. Now that the bad weather of fall is here consumption has fallen off noticeably. Lubricating oils and fuel oils also remained unchanged at prices given in current quotations.

Spring Business On Brushes Reported Good

Toronto.

BROOMS, BRUSHES. — There is a continued strong position on corn brooms due to high prices of broom corn in the United States. Manufacturers had previously anticipated that with the coming of the later crop broom corn lower prices might be quoted.

As yet there has been no indication of lower prices on the raw materials. Brushes held steady during the week. Manufacturers point to the fact that an advance has been recorded on brushes in the United States and that it is only due to the presence of stocks of bristles in Canada sufficient to see the trade through for some little time that prevents an advance in this market. Spring booking business for brushes is reported good.

Iron And Steel In Fair Demand

Toronto.

IRON AND STEEL.—There is no indication as yet that prices locally on iron and steel are in any easier position. Existing stocks are limited and with embargoes prevailing on shipment from the United States, except where it can be shown that it is to be used for war purposes, there is small likelihood of easier prices prevailing in this market until a better supply is assured. Demand for iron and steel is reported fair.

Black Sheets Down 50c To $1 On Some Gauges

Toronto.

SHEETS, PLATES.—Declines of 50c to $1 per hundred pounds have been recorded on certain gauges of black sheets. One firm formerly quoting No. 28 gauge at $10 per hundred has announced a price at $9. This same concern has made changes on other gauges as follows: No. 29 gauge, $9.10 per hundred pounds; No. 26, $8.90; Nos. 22-24, $8.85; No. 18-20, $8.80 per hundred pounds. Another concern formerly quoting No. 28 gauge at $11 per hundred is now quoting at $10.50; No. 26 gauge, $10.40; Nos. 22-24, $10.35; Nos. 18-20, $10.30; No. 16 gauge, $11.25; No. 14, $11.15 per hundred pounds. Galvanized sheets held in steady position except for the fact that lower quotations of last week are now more generally being quoted. Black sheets are in fairly good supply due to recent arrivals. On plate the market is about cleaned up, 3-16-inch and ¼-inch plate being practically unobtainable.

Conductor Pipe And Eavetrough Going Well

Toronto.

CORRUGATED SHEETS, CONDUCTOR PIPE.—Manufacturers of conductor pipe and eavetrough report that repair work has occasioned a fairly good demand for these commodities within the past few weeks. Corrugated sheets, however, are in rather light demand. Nothing definite has been learned as yet with respect to the new prices on the sheets affecting this particular commodity and dealers have shown no disposition to change prices. Eavetrough and conductor pipe are being quoted at 10 per cent. off list.

Modification Of Government Control

Toronto.

BOILER TUBES.—Dealers in boiler tubes in elaborating on the extent of control of the Government over supplies of boiler tubes amplified the statement of last week by stating that it is only supplies of these goods which have been brought into the country since September 20 which the Government can commandeer if required. It is stated that stocks previously in the country can still be sold to the domestic trade under certain restrictions. There is no improvement in the situation with respect to arrivals and prices have held at firm levels.

Lead Pipe And Lead Waste Pipe Down

Toronto.

LEAD AND ZINC PRODUCTS. — Owing to the rapid decline in the price of pig lead during the week there have been further declines in lead pipe and lead waste pipe of 1c per pound. Lead pipe is now quoted at 16c and lead waste pipe at 17c per pound. Other lead products are in weaker tone owing to the primary situation in pig lead.

Lead Goes To Still Lower Price Levels

Toronto.

INGOT METALS.—The feature of the week has been the decline in the pig lead market both in primary markets and in local market. Pig lead prices are now just half what they were six months ago. Owing to the unsettled condition in the market buying has not been active.

COPPER.—With unsettled conditions in the producing fields where strikes have been in progress and a return to work reported, conditions in the copper market generally have been in an uncertain condition for some time. Locally there has been a fair demand with prices for casting copper at 32c per pound and electrolytic at 33c per pound.

Tin.—Spot tin in the primary market at New York was very scarce during the week but London market declined 15s. on Straits tin. It is understood that quantities of tin are held up awaiting granting of permits to be shipped. Locally prices held unchanged at 63½c to 65c per pound.

SPELTER.—There was a quiet market for spelter during the week but a better inquiry was noted on the part of consumers in the primary market. Locally prices held slightly higher at 10c to 10½c per pound.

LEAD.—Lead is in weaker tone during the week with declines recorded locally due to a big sag in the primary market within recent weeks. The Trust price in New York is quoted at 6.25c with intimation that a still further reduction is a possibility. In the local market quotations were down to 9c to 9½c.

ANTIMONY.—There is very little activity in the antimony market. In the primary market, there are plenty of sellers but no buyers. Locally prices were unchanged at 18c per pound.

ALUMINUM.—Demand on aluminum is light with prices unchanged at 60c per pound.

PIG IRON.—Prices of domestic pig iron remain firm and unchanged with no indication of lower prices until the furnaces have disposed of a considerable portion of orders already booked. Under the present conditions prices are purely nominal.

LONDON MARKETS

LONDON, October 23.—Fall and winter goods are in demand, and with the approach of the hunting season rifles, sporting cartridges, etc., are moving out well. Stocks are in very fair shape in spite of the shortage on some lines. Business is good and prices continue to be firm. Advances are recorded this week on turpentine, vises, hog rings, and some lines of Roger's cutlery.

Rogers Cutlery Lines Advance

London.

KNIVES AND FORKS.—An advance of ten per cent. has been made in prices on 1847 Roger's solid handle knives and forks. This advance includes the plain style and all other patterns.

Alarm Clocks

A good sale is reported for alarm clocks at the following prices; Good Morning $1.15 each; Lookout $1.50; Sleepmeter $1.65; Big Ben $2.50 and Baby Ben $2.50.

Advance On Some Lines Of Vises

London.

VISES.—New and higher prices are being quoted this week on National vises as follows:

No. 603 x 3 in. jaw, $3 each; No. 603½ x 3½, $4.75 each; No. 604 x 4, $5.50 each; No. 604½ x 4½, $8 each.

Roller Skates

New prices issued on genuine ball bearing roller skates are quoted as follows; No. 6 skates, $2.50 per pair.

Good Sale For Building Lines

London.

BUILDING PAPER, ROOFING.—A good sale is reported this week for building paper and ready roofing at following prices: Plain fibre D 2, 59c per roll; tarred E 2, 79c per roll; tarred felt $3.30 per 100 lbs.; asbestos paper $12.00 per 100 lbs.

Brass Seam Binding

Prices this week on brass seam binding are as follows: 50 yards to box, 9/16, $6.50 per 100 yds.; ¾, $8.50 per 100 yds.; ⅞, $9.50 per 100 yds.

Brass oil cloth binding in sets are quoted as follows: 5/4, $2.85 per doz. sets; 6/4, $3.60 per doz. sets; 8/4, $4.50 per doz. sets.

Prices On Hog Rings Advanced

London.

HOG RINGS.—New and higher prices are recorded this week on hog rings as follows: No. 1, 60c per 1000; No. 2, 60c per 1000; No. 3, 60c per 1000; No. 2, 3, 4, assorted, 90c per 1000; No. 3, 4, 5, assorted, 90c per 1000.

Hockey Sticks

Prices on hockey sticks this week are as follows: Boy's red sticks, 85c per doz.; boy's white, 85c; rock elm men's, $2 per doz.; Spalding, $3.75 per doz.; Mic Mac, $4.75 per doz.

Starr skates are quoted at 30 per cent. off list.

Cow chains are priced at 12½ per cent. off list.

Stall fixtures are unchanged at $1.25 per doz.

Net Prices On Sleigh Bells

London.

SLEIGH BELLS.—Net prices quoted this week on sleigh bells are as follows for Swedish chimes, collar bells and team bells:

Swedish Chimes—No. 1400 x 4 Bell, $2.10 each; No. 1500 x 4 Bell, $2.50 each; No. 1700 x 6 Bell, $3.35 each.

Collar Bells, on Strap—No. 2, $1.30 doz.; No. 3, $1.45 doz.

Team Bells—No. 7 coppered steel, $1.30 doz.; No. 2, rough bell metal, $3.35 doz.; No. 3, $3.85 doz.; No. 4, $5.50; No. 5, $6.50; No. 2, genuine Swiss, $4.60; No. 3, $5.90; No. 4, $7.50; No. 5, $10.75.

New Quotations On Winter Goods

London.

SNOW SHOVELS.—Prices quoted this week on snow shovels are as follows: Cheap japanned, $4 per doz.; long handle socket, $7 per doz.; D. handle socket, $9.62 per doz.; D. handle socket, $12.25 per doz.

FURNACE SCOOPS.—In D. H. socket are $7.87 per doz.; L. H. socket, $7.87 per doz.

SIDEWALK SCRAPERS. — Light socket $3.50 per doz.; heavy socket, $5.25 per doz.

Weather Strip; Sifters; Axes

London.

WEATHER STRIP.—Wood and felt weather strip is quoted this week at 75 per cent. off list; Swan hardwood strip is 75c per set and Frost King strip is quoted at $4.40 per doz. pkgs.

Ash Sifters

Common wood sided ash sifters are quoted at $2.15 per doz.; Banner sifters are $2.90 each and Burrowes rocker No. 1 sifter is $5.25.

Handled Axes

Prices on handled axes are as follows: Boys red, $9 per doz.; Eagle axes $13.50 per doz.; Cherokee $15 per doz.

Prices On Batteries And Sporting Lines

London.

BATTERIES. — Prices quoted this week on Ever-Ready Daylos and batteries are 33 1/3 per cent. off list. There is a big sale for this line of goods now and it is expected it will continue until Christmas.

Shooting Accessories

Loaded shells (black), add 10 per cent. to list and smokeless shells are quoted at net list.

Sporting cartridges are quoted as follows: American, less 2½ per cent. off Winchester list; Dominion, add 60 per cent. to Dominion list. There is also a good sale for cartridges.

Prices On Nails; Castle Builders

London.

NAILS.—There has been no change in the price on nails this week at former quotations as follows: Wire nails $5.45 base; cut nails $5.75 base. There is a good sale for nails.

Castle Builders

Castle builders (steel toys) are priced as follows this week, with a good sale: No. 0, $4 per doz.; No. a, $6 per doz.; No. AA, $8 per doz.; No. 1, $12 per doz.; No. 2, $24; No. 3, $48 per doz.

Further Advance In Turpentine

London.

TURPENTINE.—A further advance of 2 cents per gallon has been made this week in the price of turpentine, bringing new quotations to the following:

1 bbl. lots, 75c per Imp. gal.; 2 to 4 bbl. lots, 74c per gal.; 5 gal. lots, 82c per gal.

Linseed Oil

There has been no change in the price of linseed oil quoted as follows:

	Raw	Boiled
1 to 2 bbls.	$1.37	$1.40 per gal.
3 to 5 bbls.	1.36	1.39 per gal.
6 to 9 bbls.	1.34	1.37 per gal.

White Lead, Glass And Putty Steady

London.

WHITE LEAD IN OIL.—No change has been made in prices of white lead in oil at the following quotations:

	tons	less
Pure	$17.50	$17.80 per 100 lbs.
Pure Elephant	18.00	18.30 per 100 lbs.

Glass

Glass prices are firm this week in a good sale. Single diamond and double diamond are 50 per cent. off list and cut lights 40 per cent. off.

Putty

Putty prices are likewise unchanged at $4.75 per 100 lbs. for standard putty and $5.75 per 100 lbs. for pure putty.

Garden Hose Prices Show 10% Increase

Winnipeg.

HOSE.—New prices on garden hose for 1918 delivery have just been announced and show an increase of approximately 10 per cent. over last year. To-day's prices are as quoted below:

Competition, ½ x 3 ply, $9.50 per 100 ft.; ¾ x 3 ply, $11.25 per 100 ft.; trade, 1 x 3 ply, $16; Canadian corrugated, ½ in., $16.75 per 100 ft.; ¾ in., $22.50 per 100 ft.

Axe Demand Expected To Be On Increase

Winnipeg.

AXES.—Axes at present continue to show a fair demand, which no doubt will increase as the season advances and the lumber companies commence operations. Present prices are as follows: Single bit, $12 to $14.50 doz.; double bit, $14.50 to $16.50 doz.

Shovels And Scoops Are Holding Firm

Winnipeg.

SHOVELS, SPADES.—Prices continue firm on all lines of shovels and scoops and are quoted below:

Shovels—Olds D.H., sq. pt., $12.40 doz.; D.H., rd. pt., $12.40; L.H., sq. pt., $12.40; L.H., rd. pt., $12.40; Jones, D.H., sq. pt., $13.30 doz.; D.H., rd. pt., $13.30; L.H., sq. pt., $13.30; L.H., rd. pt., $13.30 doz.

Scoops—Crescent, No. 4, $14.80 doz.; No. 6, $15.80; No. 8, $16.80; No. 10, $17.80.

Jones' Scoops—No. 4, $16 doz.; No. 6, $16.90; No. 8, $17.80; No. 10, $18.70.

Decline Recorded In White Lead In Oil

Winnipeg.

WHITE LEAD IN OIL.—Owing to the declining tendency of pig lead, the market on white lead in oil shows a decline and is quoted to-day as follows: Decorator's pure, ton lots, $18.05 100 lbs. Less than ton lots, $18.40 100 lbs.

Linseed Oil Holds Firm

Linseed oil prices continue firm as last quoted, viz., raw, $1.57 gal.; boiled, $1.60 per gal. However, the market on flax is very unsettled at the present time, and conditions at present point to higher rather than lower prices.

Strength Again Returns To Turpentine

Winnipeg.

TURPENTINE.—The turpentine market which last week showed a decline has again strengthened owing to the scarcity of this product in the south, and indications point to even higher than those quoted to-day which are as follows:

Barrel lots, 80c gal.; half barrel lots, 83c gal.; five gallon lots, 85c gal.; 1 gal., 85c gal., plus the usual extras for containers.

WINNIPEG MARKETS

WINNIPEG, Oct. 22.—Hardware markets for the past week show a steady tone in general, with the exception of white lead and galvanized iron sheets, these two commodities showing a decline. Snow storms which seem to be general through the West have added greatly to the stove trade, some of the manufacturers being unable to meet the demand.

Free Movement In Stovepipes And Elbows

Winnipeg.

STOVEPIPES.—Stovepipes and elbows are moving freely. The sales in pipe however are practically confined to patent standard, as riveted and ready-to-rivet pipe are almost off the market. Present prices on pipe are as follows:

Patent standard 6", $19.10, 100 lens; 7", $20.45, 100 lens.

Elbows—Heavy, 6", $2.75 doz.; 7", $3.05; 8", $4.55 doz.; light, 6", $2.10; 7", $2.25 doz.

New Prices on Pump Leathers

Bookings are now being taken on tank pump leathers for delivery in 1918. The new price just announced is 20 cents per doz. over last year's price, namely $4 doz.

Horseshoes In Demand With Winter Conditions

Winnipeg.

HORSESHOES.—With the approach of winter, good demand is reported on all lines of horseshoes with prices holding firm, as quoted below:

Iron—No. 0 to 1, $6.75 per 100 lbs.; No. 2 and larger, $6.50 100 lbs.

Snowshoes—No. 0 to 1, $7 per 100 lbs.; No. 2 and larger, $6.75.

Steel—No. 0 to 1, $7.20 per 100 lbs.; No. 2 and larger, $6.95.

Featherweight—$8.35 per 100 lbs.

Rivets And Burrs Are In Strong Market

Winnipeg.

RIVETS, BURRS.—Prices on rivets and burrs still continue firm, there having been no change since early spring, even though raw materials have greatly advanced since then, and a revision in prices would not come as a surprise. To-day's prices are quoted herewith:

Iron Rivets—10%.

Copper Rivets—No. 7, 65c lb.; No. 8, 66c lb.; No. 9, 69c lb.; No. 10, 71c lb.; No. 12, 76c lb.

Five-lb. assorted boxes of Copper Rivets—No. 8, 74c lb.; No. 10, 79c lb.

Copper Burrs—No. 7, 65c lb.; No. 8, 66c lb.; No. 9, 69c lb.; No. 10, 71c lb.; No. 12, 76c lb.

Galvanized Sheets Have Been Readjusted

Winnipeg.

SHEETS.—Readjustment of United States prices on galvanized sheets which took place recently has already been felt here and this week's markets show a decline, varying from $1 per 100 lbs. on 10¾ oz. to 45c per 100 lbs. on 16 ga. To-day's markets are quoted as follows:

	Premier	Apollo or Fleur-de-lis
	Per 100 lbs.	
10¾ oz.	$12 50	$12 50
28 ga.	12 20	12 20
26 ga.	11 90	11 90
24 ga.	11 75	11 75
22 ga.	11 75	11 75
18 x 20 ga.	11 75	11 75
16 ga	12 00	12 00

No change is reported on black iron sheets but the above reduction on galvanized sheets leaves the spread between the two very small and may necessitate a revision of prices.

Egg Beaters Advance

Dover egg beaters again show an advance and are quoted to-day as follows: No. 2 family size $1.60 doz.; No. 3 hotel size, $3 doz.

PITTSBURG MARKETS

PITTSBURGH, Oct. 22.—Price fixing at Washington is proceeding somewhat more slowly than was expected, as no additional prices have been announced since those of Oct. 11, referred to in last report. Those prices were upon large and small billets, sheet bars, slabs, wire rods, skelp and shell rounds, the prices previously fixed, Sept. 24, having been on coke, pig iron, bars, shapes and plates.

What the trade has been expecting lately has been prices on sheets, tubular goods and wire products, possibly also upon scrap, together with a precise statement as to pig iron, covering the

different grades and districts. The original agreement upon pig iron was as to foundry and basic at valley furnaces. Meanwhile there have been sales of foundry pig iron by northern furnaces other than valley at the price of $33 at furnace as a tentative one.

There is ground for surmising that difficulties have arisen whereby the War Industries Board has been unable to reach a conclusion as to sheets, tubular goods and wire.

More Pig Iron Activity

The pig iron market, on the whole, has been somewhat more active than might have been expected, when set prices were named at less than two-thirds the prices at which a very considerable volume of business has been done for delivery in the fore part of next year. That business occurred chiefly in June, the market thereafter, up to the time of the price fixing, being very quiet, with transactions confined to small lots for early deliveries. In the past ten days the market has been distinctly more active than in that period. At least 50,000 tons of valley Bessemer and basic has changed hands, and the valley furnaces have sold small lots of foundry iron, all the sales being for early delivery. Some of the Virginia furnaces, on the other hand, have sold for extended delivery.

The blast furnaces are perfectly ready to let their iron go at the fixed prices, but as there are contracts on books at much higher prices they wish to protect that business as much as possible and to sell indiscriminately in the open market would make it more difficult to enforce the contracts. Accordingly the common attitude is to sell only to regular customers, and only iron that is urgently needed.

Steel Market Quiet

The finished steel market is very quiet. In the commodities for which prices have already been fixed the mills will not sell except to take care of customers for early deliveries, and as the customers are already quite well covered scarcely any business occurs. In the products for which prices have not already been fixed, it is quite significant that there is hardly any business being done. If buyers were fearful that they would be unable to secure deliveries at the prices to be fixed, they would now be playing safe by paying the higher prices that would now be asked, for on such purchases perference in delivery would naturally be given. This they are not doing, to any extent, therefore it is impossible to believe that steel is really very scarce. In the case of sheets, for instance, there were buyers for several months of both blue annealed and black at between 8.00c and 9.00c, while now, with prospects that the prices will not be much, if any, above 4.00c for blue annealed and 5.00c for black, there is no buying at intermediate prices, and one mill has been canvassing for business in the past few days on the basis of making sales subject to the prices when fixed. This is quite a curious commentary on the picture producers were drawing of their market and prospects for demand only a few weeks ago. In other words, the sheet bubble has burst.

War Steel Tonnage

The question of how much steel will be required for prosecuting the war is not being answered. The situation is no clearer and the latest developments merely suggest that it never will become clearer. The Government has asked sellers not to give out specific information as to orders placed, and the statements at Washington as to the amount of business expected to be placed are rather indefinite. One statement is that orders are to be placed, following upon the price agreement, for 6,000,000 or 7,000,000 tons of steel. This would be for delivery in 1918 but it does not throw much light on the matter, first because it is not known how the tonnage will be distributed among the various commodities, or whether the deliveries will be required uniformly throughout the year. Then there is the matter of purchases for the Government's Allies, which do not seem to be included in the figures just mentioned. Orders placed thus far by the Government are understood to total about 3,000,000 tons. A considerable part of this steel has already been delivered, and perhaps not much will run into next year.

Production of finished rolled steel last year was about 31,500,000 gross tons, while production now is probably running at the rate of 32,000,000 or 33,000,000 tons a year, with a probable capacity in excess of 35,000,000 tons. Production is limited by shortage of coke and labor, chiefly the former. It would seem fair to make a rough guess that the proportion of the output required for all war purposes will be not less than 30 per cent. nor more than 40 per cent. of the total output. This would include exports to the Allies. As there have been large exports to the Allies hitherto, say between 15 and 20 per cent. of the output, including steel worked up here into shells, rolling stock, machinery, etc., for export, as well as exports to neutrals of between 5 and 10 per cent., and the exports to neutrals may be extremely light, it does not seem altogether probable that steel for commercial purposes will be extremely scarce in future.

Certainly there will eventually be a large decrease in the consumption of steel by the railroads unless something is done. The railroads have been buying practically nothing of late and it is quite uncertain whether they will take hold with prices as now fixed. While there is a large reduction, prices are still fully double the average of the ten years ending 1913, and the railroads may not be able to pay. The Interstate Commerce Commission was expected to do something by way of reopening the subject of advanced freight rates. Oct. 28, but it has just been announced that the subject is postponed for 60 days beyond that date.

A foundry coke differential has not been established and the coke situation remains that $6.00 per net ton at ovens was set Sept. 21 as a general basis price. In some instances coke operators have sold regular customers foundry coke at $6.00, while it is understood a few have set their own differential by selling in a few cases at $7.00. In general there is very little foundry coke to be had and the situation is very distressing to many iron foundries.

INVESTIGATION INTO STEEL CONTRACTS

Producers Are Being Requested to Furnish Complete Data Regarding Contracts for Raw Material

Cleveland, Ohio, Oct. 25.—"The Iron Trade Review" to-day says: Much curiosity has been aroused as to the purpose of a formal request to iron and steel producers from the Federal Trade Commission for complete data regarding their contracts for raw materials during the next nine months and their obligations for sale of their product up to July, 1918. At the same time, expressions of opinion are solicited from the producers as to the advantages and disadvantages likely to accrue in the event prior bona-fide contracts for material bought or sold were to be abrogated. From the beginning of the present price regulation the general understanding has been that all contracts and uncompleted business were not to be distributed and that the fixed quotations were not to be retroactive.

Offers of finished steel in the open market at the fixed prices are increasing, but the tonnage still is limited and either regular customers or attractive business opportunities are receiving the preference. Producers continue more freely to quote the price of $33 base, subject to differentials to be subsequently determined. Based on the estimates of customers as to their needs for the first half, some producers express renewed doubts that the country's production will be able to meet all requirements.

INCORPORATIONS

Laval de Montreal.—Gold Medal Broom & Brush Co., has obtained charter.

Toronto.—Ignition Repair and Supply Company has been incorporated with a capital of $40,000 to manufacture automobile motors, batteries, magnetos and auto accessories. L. J. Pashler is one of the incorporators.

Toronto.—Bethune Pulp & Lumber Co. has been incorporated with a capital of $50,000 to carry on business as timber merchants dealers in hardware and building materials.

Montreal. — Canadian Manufacturers' Association has decided to hold two meetings of the executive organization in Montreal each year. This innovation will be of considerable value to Montreal manufacturers in influencing policy of the association on important questions.

WEEKLY PAINT DEPARTMENT

From Outside to Inside

Ads. That Pull—Outside Paints Slowing Up, Inside Finishes to the Fore — Looking Things Over — Teaching Your Customers How—Encourage the Amateur Painter —Suggest the Proper Brush.

ONE of the most interesting newspaper ads. which has appeared during the campaign on fall painting is that reproduced herewith, and when it is known that this ad. occupied space practically 9 x 10 inches, it can easily be determined what value these people place on the fall business.

The heading is extremely bright and commands attention at once, "Follow Nature's Plan—Paint in the Fall," and then reasons are given as to why fall painting is best. The ad. was extremely timely, coming out in September, and some of the lines mentioned were House Paint, Floor Paint, Barn Paint, Shingle Stain, Roofing Paint and Floor and Furniture Varnish. However, it will not be long until outside painting will be impossible but that is no reason why the paint department should be overlooked.

Advices from all over the country indicate that retailers are pushing the sale of the many inside finishes aggressively and there is no reason why the sale of these should diminish in any way. Point out to your customers that a bright interior in their home will help make them forget the many cold nights and days which keep them indoors. The long winter evenings will not be so dreary, if things about the house are brightened up. And there are so many individual things about the inside of a home which come in for attention.

It might be well in looking over these that the walls and ceilings be mentioned first. They are perhaps the biggest item to come in for consideration. For the walls, there are calsomines and paints which lend attractiveness and which can be easily applied. Wallpapers are also being sold in many retail hardware paint departments with marked success. As part of the decorations for the walls, it is well not to overlook the doors and windows which will carry trimming colors. In having his home nicely decorated, your customer will be doing himself a real service—creating as he does an atmosphere of pleasant surroundings —making his home more sanitary and cleaner for himself and family.

Then there are the floors to be considered—some are painted over the entire surface taking a regular floor paint or using a varnish stain which creates a hardwood finish. In addition to these two finishes, there are hardwood floors which some people varnish and on which others use wax—either method creating a demand which must be supplied from your paint department.

The rooms in the house, living, dining or bed rooms, etc., usually require certain lines of paint and finishing and it is here that the retailer who studies his range of paints carefully can make a big success of this department. On learning your customers' wishes, it then devolves on the merchant to sell only those lines which will give the best results. Where there are two or more methods of finishing a room, each should be explained carefully so there will no regrets when the work has been completed.

This should be a splendid time for merchants to encourage the amateur painter. Help is scarce now and on investigation you will find that many people are putting off "doing that room" because they cannot secure help. There is scarcely a man or even a woman who could not paint a floor, who could not put on a wall finish, who could not brighten up the radiators around the

(Continued on page 52.)

Follow Nature's Plan Paint in the Fall

September is a good month in which to paint. All the pests of Summer, such as flies, spiders and dust, have gone, and the mild heat of September's sun will give the paint time to properly cure on the sides of your house. Besides, it's the natural thing to put on a protecting coat to turn the winter weather. HUNTER-HENDERSON PURE PAINT is guaranteed weatherproof.

HUNTER-HENDERSON PURE PAINT
High prices of materials have not induced us to cut down on the quality of our Paints. The same sterling quality goes into each can, for we believe that quality wins. Regular body colors, $3.20 per gallon. Trimming colors, $3.90 to $4.25 per gallon.

BAPCO PORCH FLOOR PAINT
Absolutely waterproof for outside porches, decks, etc. It will effectually turn the rains of Fall and the snow of Winter. $1.00 per quart; $1.90 per half gallon.

HUNTER-HENDERSON BARN PAINT
The same quality as our pure paint, but in the dark colors suitable for painting barns, sheds and all outside wood work. In 4-gallon cans, $3.10 gallon. In 1-gallon cans, $3.20 gallon.

MARINE SPAR VARNISH
For all exposed wooden surfaces such as front doors, store fronts, boat work, etc. Per half-pint, 50c; per pint 85c.

BAPCO OIL SHINGLE STAIN
The most durable shingle stain made. It has lots of body so that it is especially suitable for re-staining old houses. If you are going to paint, see us about "Bapco." Reds and browns, $1.50 gallon; greens and grey, $1.75 gallon.

H.-H. BLACK ROOFING PAINT
Jet black liquid asphalt. Will last as long as the shingles on the roof; $1.00 per gallon.

BUNGALOW SHINGLE STAIN
Our regular creosote and oil shingle stain; will give good satisfaction on any shingled surface. Browns and reds, $1.00 gallon, in 4-gallon cans; green and grey, $1.25 gallon in 4-gallon cans.

"FLORSPAR"
This varnish can not be excelled for floors or any interior woodwork where a tough, elastic and waterproof varnish is required. Per half-pint, 90c; per pint, 85c; per quart, $1.

SPECIAL OFFERING OF STOVEPIPE ENAMEL—Large bottles of Jet Black Enamel for enamelling stovepipes, range bodies, etc. Each ..... 15¢

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 24.—Interest in the paint markets this week focuses itself more closely on white lead in oil and linseed oil than was the case last week. Turpentine is also interesting the market more, and there is a revival of attention to mixed paints in view of the doings of white lead. With the market for pig lead so perceptibly weaker of late, anticipations are towards lower quotations for white lead in oil.

Linseed Oil In Variable Condition

Montreal.

LINSEED OIL.—At this time of year it has been customary to anticipate slightly easier conditions of market for linseed oil even in war time. The new crop of flaxseed if in average yield tends to ease conditions; if bountiful tends still more so. And as a matter of fact linseed oil for future delivery is being booked at easier prices than have hitherto prevailed. But the conditions of market this year are subject to adverse effects from the transportation end of the business. While flaxseed is reported to be reaching Winnipeg at the rate of from fourteen to sixteen carloads a day, there is a big constriction of this flow between West and East, and though supplies have been reaching Montreal by water these are restricted, and rail-carried supplies are still less assured. Consequently crushers report firmness of market developing due to transportation troubles ahead and already present, but the immediate condition of the market to the retailer in small quantities is reported steady, and even easier. One firm was able to quote linseed oil for immediate booking, and delivery only till the end of the month at prices under the $1.40 figure which was last week's report, and $1.37 per Imperial gallon for raw linseed oil is a representative quotation.

Linseed oil	Raw	Per Imp. gal. Boiled
1 to 4 bbls.	$1.37-$1.40	$1.40-$1.42½
5 to 9 bbls.	1.36- 1.39	1.39- 1.41½

Turpentine Is In Firmer Market

Montreal.

TURPENTINE.—There is a firmer market for turpentine, and some sources of supply are out of the market altogether this week. This bears out the accounts given last week in HARDWARE AND METAL as to the outlook for turpentine. Difficulties of transportation, and the steady firmness of the primary market account for the present market condition, and the trend of things looks towards still more strength. Quotations for the present week range as mentioned below, though it is possible that prices a shade lower may be quoted to regular customers for considerable quantities in cases where the need for conserving stocks is not pronounced.

Turpentine	Per Imp. Gal.
1 to 5 bbls.	$0.72-$0.75
6 to 9 bbls.	0.70- 0.73

White Lead In Oil Is Again Weaker

Montreal.

WHITE LEAD IN OIL.—As indicated definitely in last week's HARDWARE AND METAL the weaker tone for white lead in oil is very noticeable, and from indications of the current week there is every likelihood that this product will find lower quotations before long. Dry white lead this week dropped a cent a pound, and the inference as to white lead in oil is very obvious though no decline had been announced from any quarter at time of writing. Pig lead has been in weak market of late, and shows no sign of strengthening. Demand for white lead in oil is normal though buyers are tending to take care of requirements for the present purpose only while the market is in declining mood. Quotations of last week and up to time of writing, but subject to revision are for five ton lots $17 per 100 lbs.; for 1 ton lots, $17.30 per 100 lbs.; and for less than tons, $17.60 per 100 lbs.

Putty In Very Steady Market

Montreal.

PUTTY.—The market for putty is unchanged this week as compared with the quotations of last week, but is considered firm. Unless linseed oil should find much easier market the tone will probably maintain. Demand for putty is improving with the development of repair needs against the winter, and the approach of close of navigation when heavy goods mean heavy freight rates by rail. Quotations remain as given last week viz.: Standard putty bulk in barrels 5 ton lots, per 100 lbs. $3.25; 1 ton lots per 100 lbs. $3.40; less than tons per 100 lbs. $3.60.

Mixed Paint Outlook Continues Firm

Montreal.

MIXED PAINTS.—With white lead in oil on the declining trend there arise here and there questions as to the probable effect on mixed paints of the tendency. As far as can be ascertained at the time of writing there is not much likelihood of any reduction in prices of mixed paints. It is pointed out by the manufacturers that mixed paints did not keep pace with white lead in oil when they advanced, but climbed very slowly and reluctantly where lead and linseed oil were sky-rocketing. Other factors besides the cost of white lead in oil have to be taken into consideration also, such as the cost of containers. Turpentine is firmer also and there is no assurance that linseed oil will keep in easy market. Meantime business in mixed paints is very fair for the season, and orders for spring are already coming along satisfactorily.

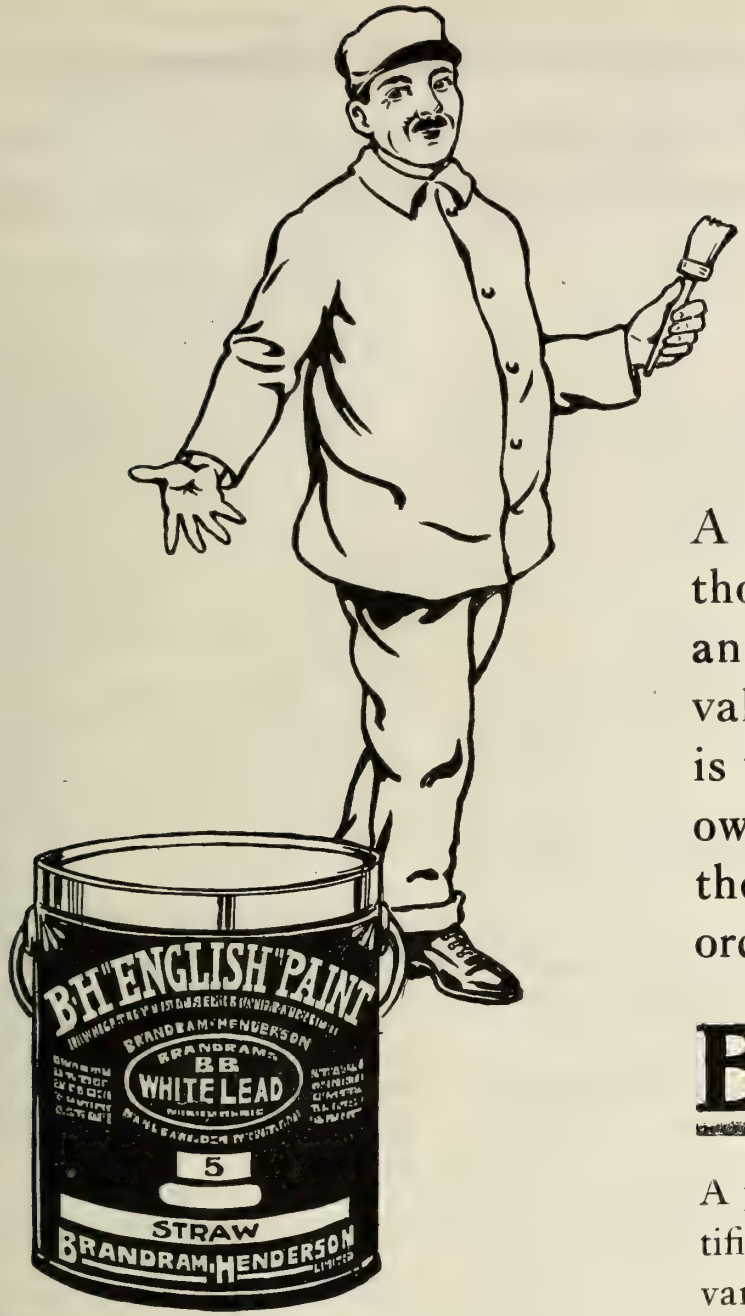
TORONTO

TORONTO, Oct. 25. — While there have been few changes in the commodities pertaining to the paint trade during the week still the situation is a most interesting one from a number of angles. White lead in oil is in weaker tone due to the declining tendency in pig lead and this is having its bearing on other commodities. Linseed oil is in a very uncertain market. While lower prices have been quoted for future than for spot delivery the opinion is expressed that much depends on whether or not the Argentine crop of flaxseed is able to get into the American market.

Firmer Tone Evident In Linseed Oil

Toronto.

LINSEED OIL. — There has been a tendency to firmness in the market for linseed oil during the week as indicated by the advance on the part of one of the large dealers from a quotation of $1.36 to $1.40 per gallon for raw oil in single barrel lots. Quotations were still being made on the basis of $1.37 per gallon in single barrel lots in some quarters and the higher range was on the basis of $1.41 per gallon for raw linseed oil in single barrel lots. There was an upward tendency in the seed market during the week, seed for October shipment being quoted on Thursday of last week at $2.95 and at the close of the market on Wednesday of this week



The Paint That Pleases The Experts

A master painter who has used thousands of gallons of paint is an excellent judge of paint values, and his recommendation is valuable in confirming your own judgment. What pleases the expert will please the ordinary consumer.

B-H "ENGLISH" PAINT

70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

A pure paint, made according to a scientifically correct formula, which never varies, always gives maximum protection and durability when properly applied. It pleases the expert because it is reliable. It will please your average customer for the same reason.

If we are not represented in your town, we will be pleased to hear from you.

BRANDRAM-HENDERSON LIMITED

MONTREAL HALIFAX ST JOHN TORONTO WINNIPEG CALGARY EDMONTON VANCOUVER

at $3.10½ per bushel. As pointed out by men closely identified with the oil industry much depends on future oil whether or not Argentine seed can be brought into the American market. There is a good crop reported in the Argentine, but should bottoms not be obtainable to carry the seed to the United States it might just as well not be a good crop so far as the effect on the market goes. If this seed can be brought in future oil will probably be lower. If it cannot be brought into the American market prices will be firm and probably higher. There has been a fairly good demand for spot oil.

	Raw. Imp. Gal.	Boiled. Imp. Gal.
1 to 2 bb's.	$1.37-$1.41	$1.40-$1.44
3 to 5 bbls.	1.36- 1.40	1.39- 1.43
6 to 9 bbls.	1.34- 1.38	1.37- 1.41

Higher Prices Again For Turpentine

Toronto.

TURPENTINE.—A firmer tendency in the turpentine market worked out toward higher prices locally, the range having been increased 4c on the lower quotation and 2c per gallon the higher quotation, leaving the market at time of writing at 74c to 77c in single barrel lots. There was a continued strong situation in the primary market during the week with the exception of Wednesday when slightly lower quotations were made than those prevailing for some days previous. However, this may only be a passing phase of the market. Dealers locally express the opinion that turpentine has probably reached the high point of the season in the primary market and do not look for prices to change much for some time to come. Demand has been light with stocks low.

	Imp. gal.
1 barrel	$0.74-$0.77
2 to 4 barrels	0.73- 0.76
5 gallon lots	0.82- 0.85

Mixed Paints In Fair Demand

Toronto.

MIXED PAINTS.—It will be borne in mind that owing to the unsettled conditions regarding white lead in oil the future price of paint may be somewhat uncertain. The retail trade, it is to be assumed, is in a fair way to handle the business incident to the fall trade, and orders coming here are reported fair. It is learned that the sorting demand is better in some instances and there has also been an increased number of bookings as for spring delivery.

White Lead In Oil Continues Unsettled

Toronto.

WHITE LEAD IN OIL.—While there are no new quotations available for the week, it is interesting to note that a weaker tendency is noted in pig lead. As stated last week this was a factor in the previously reported lowering of the finished lead and as there is yet an unsettled tone in connection with this, it is to be expected that some new price basis may soon be reached. At the moment there is not a great demand, but some orders of a sorting nature are being received. Quotations are still being made as follows: Ton lots at $17.50; smaller quantities, $17.80 per 100 pounds.

Glass And Putty Holding Steady

Toronto.

GLASS, PUTTY. — The firm situation in glass continued during the week without any further price changes taking place. Some jobbers continue to quote only when they see specifications. Assertions are made by dealers that the present cost to the trade is about equal to the manufacturers' cost to the wholesale house. Stocks are reported to be getting low and the time may not be distant when wholesalers will again have to make purchases at the high prices now prevailing in the American market. Demand for glass has been fairly good, for use largely in winter repair work. Putty remains unchanged in steady market at prices given in current quotations.

Varnish Shellac And Gum Shellac Down

Toronto.

SHELLAC. — Lower quotations were made during the week on varnish shellac and gum shellac. Varnish shellac has been reduced 25c per gallon and pure white is now quoted at $4 per gallon and pure orange at $3.75 per gallon. Gum shellac shows an easier tendency. TN being quoted at 60c per pound and finest white at 70c per pound, which represents a decline of 6c to 9c per pound. Lower quotations were induced by an easier condition in the primary market.

THIRTY YEARS IN BABBITTS

(Continued from page 30.)

Regardless of their constituent elements, babbitts which register alike in the above physical properties will give like results under like conditions of service.

To obtain results from babbitt metals such as will enable one to guarantee efficiency there must be extreme care taken and scientifically correct methods adopted to assure a uniform alloy. In order of procedure, these methods usually are:

First, the metals to be used are tested for purity by a metallurgical chemist, and when everything is found satisfactory the melting process begins, each particular grade being made in enormous quantities.

During the melting many tests are made to ensure a perfect chemical affinity of the mixture. After being poured and before being passed into stock it is again tested for hardness by the Brinell method and on a friction testing machine, and the babbitt must stand up to all tests or it is discarded.

Mr. Harris' experience has been gained during the last thirty years by studying all requirements, and whenever a difficult problem arose it was a pleasure to him to try and overcome same. Each problem was a step up the ladder of experience.

The lack of method of applying metal in the average machine shop is very faulty. In using babbitt metals made under scientific principles a word as to how to obtain best results may be added as a guide to the machinists. Bearings to be filled should always be dry and free from oil.

Heating the shell and mandrel to from 100 degrees to 150 degrees C. before the babbitt is poured into it tends to prevent blow holes and similar defects, and also prevents the lining from shrinking away from the shell.

Babbitt bearings must not be jarred while the metal is solidifying, since any disturbance at this temperature tends to enlargement of the crystals and corresponding brittleness.

Pour the babbitt metal at as low a temperature as is consistent with the filling of the moulds.

Red hot metal is overheated and has a tendency to form a dense grain. Avoid red hot metal.

Stir well before pouring.

Keep metal pure and do not mix with others for best results.

When peening, strike in the centre, hitting lightly and work to the outside.

In pouring have riser and pour down on the shaft.

Do not tighten upper half of box hard until bearing is settled.

Clay mixed with oil, making a putty like mass, is the best agent with which to stop up the ends, riser, and gate, as it will not cause the metal to spit or fly when it comes in contact with it.

In closing I would like to add that the quality of the bearing metal in a machine lengthens its life, and in view of this fact it is surprising that knowledge in regard to bearing metal is not more general.

WEEKLY PAINT DEPARTMENT

(Continued from page 48.)

home, if it were only explained to them the ease with which paint is applied. There is no deep dark secret involved in the application of these various finishes and the paint dealer who encourages the amateur painter will materially increase his turnover.

Selling to the amateur painter means more than the sale of a can of paint—it means also the sale of a brush. Here again is where a merchant can advise

The successful development of the paint department depends largely on the dealer. Creating the sale is by no means the finish of his work. The dealer must see that every customer who carries away a can of paint, carries also some idea as to its proper use—the importance his customers intelligently.

of it being thoroughly stirred—the value of brushing out well over the surface—the necessity of using a good brush—in fact, the user must know how to get the greatest good out of his purchase. It means satisfaction to him—it means increased sales for the merchant.

C.P. Homestead Liquid Red

Are you familiar with our special prices on Assortment lots? A big saving to you that means larger profits. Homestead Liquid Red is linked up with our Big Consumer Campaign, and is known to all your farmer customers. It is the paint that meets their requirements and is constantly in demand.

Get your stock in now, so that you will have it when your customers want the paint. Let your customers get their supply before the roads break up, so that they can do their painting during the late Fall and Winter months.

Write us for prices or book your orders now.

If you are not a C.P. Agent, write us to-day for full particulars.

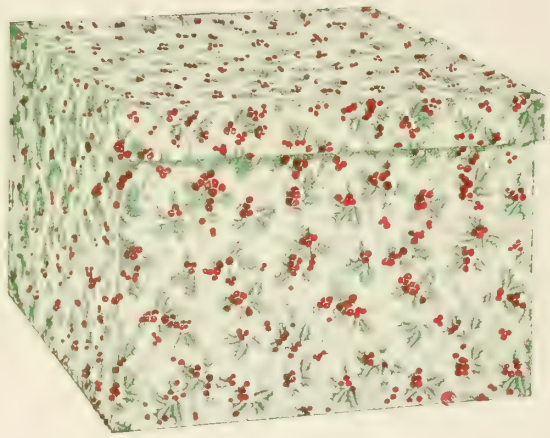
Another Big Business Bringer!

McClary's "Model" Teakettles

In Handsome Gift Boxes



Will Increase Christmas Sales

This year, more than ever before, the tendency of Christmas shoppers will be toward gifts of permanent worth—of practical everyday usefulness.

For this reason scores of your customers will buy McClary's "Model" Teakettles, if they're properly displayed—get one of our attractive window display cards.

Christmas trade wants something showy. Therefore without any additional expense to you we have packed our "Model" Teakettles in handsome boxes, beautifully decorated in holly design.

Get a supply of these "Model" teakettles at once. They make a sensible gift that every housewife will be glad to get and use.

Two sizes—8½ inches or 10¼ inches in diameter. Made of heavy nickel-plated copper with flat bottoms to fit any stove. Rigid handle to prevent unexpected tipping. Cover is placed on the side so hand will not come in contact with escaping steam, and is strongly hinged—always in place. This is the original type of side-filling kettle and it has the ample capacity, strength and lightness to insure good work.

NOTE: Our new prices make big business possible. If you haven't received our price list write us at once—don't wait until the rush begins.

Christmas in 8 Weeks

Only 8 Weeks till Christmas Tree Time

How many homes have had their festivities brought to a sudden and disastrous ending by the Christmas tree catching fire?
Point out this fact to your customers and boost the

"FRANCO" Christmas Tree Outfit

It is a safe, sane, inexpensive way of lighting Christmas trees. Prettier than candles—no danger—no worry about fire.

The cost is small, your profits big.

If there is no electricity in the home a battery can be used with equal advantage.

JAP-A-LAC

—the name that guides the housewife in her buying of household finishes of all kinds

There was a day and not long ago when Jap-a-lac represented to the dealer and to the housewife as well, a good varnish stain which had a wide range of uses around the home. To-day Jap-a-lac means far and away more.

Gold and Aluminum
White Enamels
Colored Enamels
Black Enamels
Varnish Stains
Stove Pipe Enamel

Jap-a-lac won its spurs as a varnish stain and became a household word in thousands of Canadian homes as such.

What Jap-a-lac has done in the past for one line, Jap-a-lac will do in the future, and is doing to-day for all household finishes including: Gold and Aluminum Paint, White Colored and Black Enamels, Varnish Stains and the latest addition, Stove Pipe Enamel.

Are you cashing in on Jap-a-lac this fall?

Right now the good housewife is into the Fall cleaning and is in need of some of the above lines of household finishes—are you going to sell her or is your competitor?

If your stock of Jap-a-lac is not complete, a card to-day will fix you up.

A beautiful counter display carton in seven colors. Goes with an order of stove pipe enamel.

Stephens' Paints

REGISTERED TRADE MARK

Pay Good Profits, Easy to Sell and Induce Repeat Orders

When you sell a customer a can, or any quantity of STEPHENS' PAINTS you are safe in saying to him, *"If that paint doesn't give you general satisfaction I'll give you another for nothing."* The dealer need have no fear of a customer coming back with the remark, "No good." Stephens' paints always "make good."

Made of pure Linseed Oil and the best of pigment, and prepared with the utmost care by men who have been taught what's best through years of experience. It is the kind of paint people come back for again and again.

Stephens' House Paint

Throughout the length and breadth of Western Canada there's no brand of house paint that has a more favorable reputation than Stephens' brand. It has exceptional covering capacity, gives a beautiful finish, and in every way meets with the demand of the consumer. It's a paint that pays the dealer well.

Wa-Ko-Ver Stain

A colored varnish of remarkable elasticity. Wood treated with it may dent under a blow, but the finish will give with the dent without cracking. Emphasizes natural beauty of wood. It stains and varnishes at one operation. Just what your customers want.

An attractive margin of profit goes to the dealer on every sale, and its good reputation makes it a quick and easy seller. Get our attractive agency proposition. Write without delay.

Higher Freight Rates Necessary

AS the result of an interview with A. W. Smithers, Chairman of the Grand Trunk Railway System, The Financial Post printed a strong and interesting article, presenting arguments to show the imperative need of Canadian railways, and the Grand Trunk particularly, for an increase in freight rates, if higher efficiency is to be maintained and if they are to play an effective part in the movement of all manufactured and agricultural products. Mr. Smithers criticizes the Railway Commission for its lack of action in no uncertain language. Further, he says that not only are the railways threatened, but conditions are being created which will be very discouraging to that supply of foreign capital which Canada may need to continue her development after the war. The Financial Post draws the conclusion that in view of the attitude taken, the Railway Commission lays itself open to the charge of intentionally allowing the Grand Trunk to get into difficulties in order that it may be added to the Government railway systems at a price below its market value. This is the only interview of any account given by Mr. Smithers to Canadian newspapers.

What Toronto Has Lost Through Criticism.

Presenting a new and interesting view of the effect of a critical attitude in discouraging industrial developments. The attitude towards big enterprises in Toronto is contrasted with that in Montreal, and instances are given to show how the Queen City has lost a number of very important industries to other cities.

World's Trade for Paper Mills.

Through the Canadian Export Paper Company, which was formed by some of the Canadian book manufacturers, it is hoped to develop a world market for Canadian pulp and paper. G. F. Steele, the general manager of the company, informs THE FINANCIAL POST that it is planned to extend the Canadian paper trade to every civilized country in the world.

Russell Company's Annual Statement.

THE FINANCIAL POST prints the first review of the annual statement of the Russell Motor Company. This statement is of particular interest to the investing public owing to the large part which shell manufactures have played in the company's affairs.

May Pool Flour Profits.

In connection with the order of the Food Controller, reducing the margin of profit on flour to 25 cents per barrel, a proposal is being considered for pooling the profits of the different mills in order that these profits can be evenly distributed throughout the trade. As it is, the setting of a definite margin of 25 cents means that many of the big producing plants will be able to sell at a living profit, but in the case of many smaller millers it would not be possible with the margin of profits cut so fine.

Amateur Meddling in the United States.

Agnes C. Laut deals with some interesting phases of the price-fixing effort in the United States. Her article tends to prove that efforts of price regulation have resulted in upsetting business and handicapping production.

The Crisis in the Sugar Situation.

Developments recently have been such that the Canadian refiners are not now allowed to bid for available stocks of Cuban raws, and the outlook is that there will be a rather serious shortage of sugar in this country.

The foregoing are only a few of the exclusive features of Oct. 20 issue of The Financial Post. Attention may be directed to other exclusive articles, such as: Conscription of Wealth Will Not Pay for War; The Rapid Rise of "Hurry-Up" Hurley; the Agricultural Outlook, by F. M. Chapman; the Business Outlook; an Autobus Experiment in the Maritimes, etc.

These specials are in addition to the special regular departments of The Financial Post, compiled and arranged for the interest of the investor.

NO matter what your age or business, THE FINANCIAL POST (mailed every Friday) is for you—to enrich your mind, to deepen your thinking, to broaden your field of knowledge and endeavor.

THE FINANCIAL POST OF CANADA, ...1917
143-153 University Avenue, Toronto.

Please enter me as a regular subscriber, commencing Oct. 20 issue. If I am satisfied with the paper I will remit $3.00 to pay for my subscription on receipt of bill.

Man-Size Conversation

Something about Jones---The Test Question that Silenced Jennings---Where Jones gets the information that makes him listened to when he speaks.

AFTER the little group had finished their cigars, and were about to separate, each going his own way, Brown said to Smith: "Wasn't Jones great? And didn't he put it all over Know-It-All Jennings?"

It was just such a group of men as you see gathered every day round a luncheon table, or in the club lounge; and the theme of the conversation was likewise common enough—the present business situation, and the probable situation when Peace is made.

At first every man had opinions to declare, but most of all Jennings. Jones was, at the beginning, the silent one. But at a point when Jennings, with his usual cocksureness, was voicing some extravagant views, Jones rather jolted him by asking him, "What is your authority?" And Jennings didn't have authority—nothing more than opinions.

It was then that Jones began to talk, and his tactful, well-informed views and statements instantly commanded the attention of every man round the table; for every man was learning. Even Jennings had the grace to keep quiet, for he knew he was listening to a better-informed man.

Jones has a staggering question to put to men with opinions which they express boldly and confidently. It is: "What is your authority? Your opinions are no better than your information." The average man expressing opinions doesn't possess much solid information; he just "feels" that way.

Every man not an idler is interested in Business—first, in his own business; second, in the Nation's business. Whether he be a retailer in a country town; or a manufacturer; or a lawyer advising clients on investments; or a bond-dealer needing to know much about the many factors that affect prices; or a banker; or a private investor whose funds, invested or waiting investments, are his main source of income; he is interested in Business, and he needs information—the real stuff which is the basis of opinion.

Where can each get the kind and amount of information desired?

Let him get it where Jones gets much of his information —from THE FINANCIAL POST OF CANADA.

Jones does a good deal more than just pay $3 to get this paper every Saturday; he *reads* it. To him the POST is the newspaper prized most of all. He sets aside a certain set time each week for reading it. It satisfies him because its views are based on information, and information is the POST'S chief material.

The POST keeps Jones soundly and broadly informed about the business affairs of the country. He finds that the POST takes a business-like view of all questions; that it is not influenced by any political factions or "interests," that it tells the truth whether the readers like it or not. He knows that little of importance will occur in connection with the business of the country without enlightening information or comment appearing in the POST.

He gets the best-informed news about listed and other securities, in the POST:—Milling, Transportation, Pulp and Paper, Iron and Steel, Electrical Enterprises; and so on. This weekly Security News he finds is of an authoritative character —usually signed—prepared by specialists, who, from the nature of their daily work, are in intimate touch with the factors that affect prices, and with high-up or well-informed men who have *knowledge*.

Jones finds no other paper in Canada attempting to give the service the POST does in relation to listed securities.

Jones finds the POST'S editorial page stimulating. He enjoys the biographical stories of Big Men which appear in the POST. The article each week by Agnes Laut gives him information gathered by one of the best informed and highest paid writers in America. In short, for Jones the POST is a treasury of information about Business; and it is Business by which Jones earns his bread and butter and something more.

When Jones mingles with his fellow men, and Business is the Theme of Conversation, most men are willing to listen to him, because his opinions are based on sound and reliable information.

Now, what is the application of all this? It is that you, the reader of this advertisement, may also make yourself a well-informed man about *Business—by reading THE FINANCIAL POST.* The $3 it costs per year is neither here nor there to the man who really wants to *know*—to have knowledge about matters and markets pertaining to his own business; and about the Country's business.

If you want your opinions to be well-informed; if you want a wide knowledge of Business; let the POST go to your home each Saturday. Sign the coupon below. Send no money now. Have the bill go forward in the usual way.

The Modern System of Executing Business Records In Office, Factory or Store

A system, which by its economy of time and labor, its convenience and accuracy, entirely supersedes the time-worn methods of using padded forms, duplicating books, loose sheets, and carbon paper wherever written records are required to be executed in multiple sets.

AWAY back in the early days when two or more copies of a business transaction were required it was necessary to entirely rewrite the original record.

. . .

Then came carbon paper, and a vast improvement in all kinds of systems for the handling of business records.

. . .

With the increased use of carbon paper came the demand for a convenient and rapid method of handling the record sheets and carbons. This demand was adequately met by the "Shouperior" System of Autographic Registers. A system which permits of making as many manifold copies as are desired at one operation, either by pen, pencil, or typewriter.

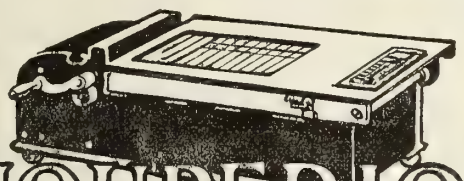
This entirely eliminates the previously necessary operation of assembling loose forms, blanks, carbon paper, etc., as the execution of one set of forms automatically prepares the next set, carbon paper and all.

. . .

The "Shouperior" System of Autographic Registers can be adapted to any kind of business. By manufacturers, wholesalers, or retailers. For bills of lading; purchase orders; receiving or billing systems; for charge and delivery forms; factory or work orders; for sales and stock records; vouchers, and cash sale systems. In fact, for any business transaction of which a multiple record is desired.

. . .

The "Shouperior" System is to-day being adopted by many of the most important concerns in this country as being the most efficient and economical method of executing their business records. It will serve you equally well.



SHOUPERIOR Autographic Registers

A System for Executing Business Records

You can learn more about the "Shouperior" System as applied to your particular business. Drop us a card or better still, send us a sample set of the forms you are now using, for quotations and advice. Address nearest office.

Autographic Register Company of Canada, Limited

ESTABLISHED 1883

Head Office and Factory: 10 St. Peter Street, Montreal, Que.

Branches: LUMSDEN BLDG., TORONTO. SOMERSET BLDG., WINNIPEG

Escaped from Germany

AN escaped prisoner tells the story of his fearful experiences in Germany in MACLEAN'S MAGAZINE for November; and gives a vivid picture of conditions in Germany as he saw them. He got out by way of Holland after appalling perils and hardships. In Holland, he was photographed, but so altered was he that his wife quite failed to recognize him in this photograph. Read this story of this Canadian soldier's escape. It is gripping stuff—a rare tale.

Canadian Finances After the War

WILL business in Canada collapse when peace comes? It may. What do the big men say? What do they know? What do you think? Are your opinions well informed? The subject is of the greatest possible importance, and you will get light and leading by reading the contribution of Col. John Bayne Maclean, who has taken the trouble to get the opinion of the biggest and most highly placed men in Canada to help him prepare his article.

Back from the Arctic

WILLIAM THOMPSON, representing the American Geographical Society, was this year in the Arctic Regions. He went to the delta of the Mackenzie River, and took many excellent pictures of the country and its Eskimo inhabitants. He makes the November MACLEAN'S the vehicle of many of his pictures and for an account of his journey. Read what this Arctic scientist has to tell us about a remote part of our land.

Slackers and Conscription

WHAT is your attitude towards the draft? You have positive opinions, of course. How do they square with Miss Laut's as they are expressed in her ringing article on Slackers in the November MACLEAN'S?

The Nation's Business

THIS is a new feature—a fearless, well-informed survey of national affairs. What we all want is an outspoken—but not vindictive—and clear-visioned presentation of factors and facts affecting our national, political and economic welfare.

Sketches of Trench Life

By Gunner McRitchie

MCRITCHIE was a cartoonist on a Western Canada daily before he went overseas. He has done a number of sketches of trench life "On the Spot," and these he has sent home, for publication in MACLEAN'S MAGAZINE. They're interesting and good.

The Late Sir Mortimer Clark

BEFORE he died, a few weeks ago, the late Sir Mortimer Clark, eminent jurist and an ex-Lieutenant-Governor of Ontario, wrote for MACLEAN'S an article on "Safeguarding Your Heirs." It has to do with the functions, service and safety of Trust Companies as executors of estates. This article by a man so distinguished, so cautious, so able, and so wise a counsellor, can be of first-rate value to every man perplexed with the problem of how his estate can be safely and prudently administered after he, the testator, has passed from this life.

A Complete Novelette

By Peter B. Kyne

HIS story in the November MACLEAN'S is a thunderingly good story of lumbermen and lumbering. Red blood is in this tale of business. R. M. Brinkerhoff illustrates it.

Short Story

By Ethel Watts Mumford

THE writer of this short story—the first of a delightful series by this author to appear in MACLEAN'S—is very well known among short story writers. Delicate fancy, wholesomeness, freshness and finished workmanship characterize all her work.

Short Story

By W. A. Fraser

A MIGHTILY well-written story of India—the kind that we all delight in; tense, bewildering, and lots of action. Fraser never wrote a better short story than this. Ben Ward illustrates it.

Hendryx and Oppenheim

SERIALISTS

"THE Gun Brand," by Hendryx, comes to an end in the November issue. Oppenheim's greatest story, "The Pawns Count," is continued. Oppenheim's story is the biggest single feature ever secured by MACLEAN'S.

SPECIFY DOMINION BRAND

J. H. McCOMB, LIMITED

Manufacturers of all kinds of Building Paper, Pitch and Coal Tar

MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

COLONIAL WIRE MFG. CO., LIMITED

Head Office and Works : HAMILTON, CANADA

If interested, tear out this page and keep with letters to be answered.

Wanted

SITUATIONS VACANT

WANTED — SALESMEN (EXEMPT FROM military duty), cover Canada; well advertised and quality line. Should be familiar with electrical hardware and auto supply trade. This is a splendid connection. Write fully and interview will be arranged. Box 497, Hardware and Metal.

SALESMAN, EXPERIENCED BELT DRESSING, for Canada territory. Meritorious oil increasing transmitted power 3% to 28%. Nationally advertised. Applicant interviewed in New York City. E. R. Senn & Company, 52 Vanderbilt Avenue, New York, N.Y.

FOR SALE

HARDWARE, BOOT AND SHOE BUSINESS for sale—clean stock, good surrounding country; doing good business; good reasons for owner retiring from business. Robert Neilly, Bradford, Ont.

FOR SALE—SECOND-HAND SAFE, IN GOOD condition; a serviceable size, fitted with Yale combination lock. Further particulars apply Bindloss Hardware Store, Bindloss, Alta.

FOR SALE — 200 WHEELBARROWS, LESS wheels. If interested, would advise looking over this stock. Prices on application. McLeod & Joynt, Lucknow, Ont.

POSITION WANTED

TRAVELLER — ENERGETIC, SUCCESSFUL, excellent connection Western Ontario hardware, plumbing and machine trade, seeks kindred lines; highest references. Box 10, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

The next time you want a clerk, be sure to advertise in the "Wanted" Page of HARDWARE AND METAL. You will receive inquiries from the livest clerks in the Canadian hardware trade, because reading HARDWARE AND METAL is a test of the clerk's interest in his business.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

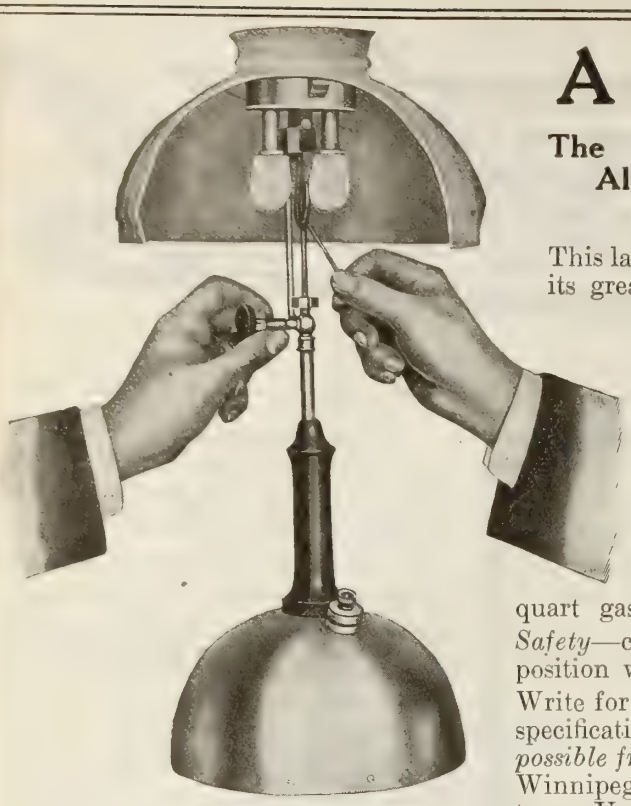
THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!



Here is how it is lighted

The Lamp that threw the Alcohol Torch into the discard.

This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power.

Safety—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton or Vancouver and cover yourself for Fall and Winter requirements.

BUY NOW

And Be Sure of Your Supply

A BIG demand for hay tools next summer is inevitable. Almost every acre that will support a crop will be seeded. The Government has helped to solve the labor problem by supplying tractors for Fall ploughing. Crops next summer are certain to surpass all history; and there will be a demand for hay tools equally great.

The demand for hay tools has every year been larger than the year previous. Next summer's demand will far exceed that of the summer which has just passed.

There was a shortage of hay tools this summer. There will be a greater shortage next summer, because the increase in manufacture has not kept pace with the increase in crop production. The increased cost of malleable iron and the scarcity of it, as well as the scarcity of labor, prevent our increasing the production of this line as we would like. Many farmers will call at your store next summer for hay carriers and hay tool supplies. They cannot wait, for to wait means a partial loss of their crops; they must get their hay tracks, forks, pulleys, cars, rope, etc., from you or from someone else. Make sure of your supply so that you will not lose this trade. Make sure by ordering now.

If you wait, you may have to order the goods to come by express, and express charges and phone messages eat up a lot of profit.

The terms are July 1st, if for delivery not sooner than February 1st.

We will fill all orders in their turn. First come, first served. If you order now, your goods will be shipped before the goods of the dealer who puts off until the last moment.

View showing Hinge with one side plate, back plate and floor plate attached.

Get the Builders in Town Interested

They can make or break the reputation of the builders' hardware you carry. Their opinions are certainly worth their weight in gold—home owners abide by their views, at any rate.

Show National Ball Bearing Floor Hinge. Point out its many vital features:

—the wear-saving structure of the spring
—the positive adjustment for pressure
—the systematic carriage of weight
—the ball-bearing action

This National product is just what builders have been looking for. You will find it a profitable item to carry, and to **push.**

Packed one in a box, complete with all necessary parts and illustrated directions for attaching; one dozen in a case—any finish.

Write at once.

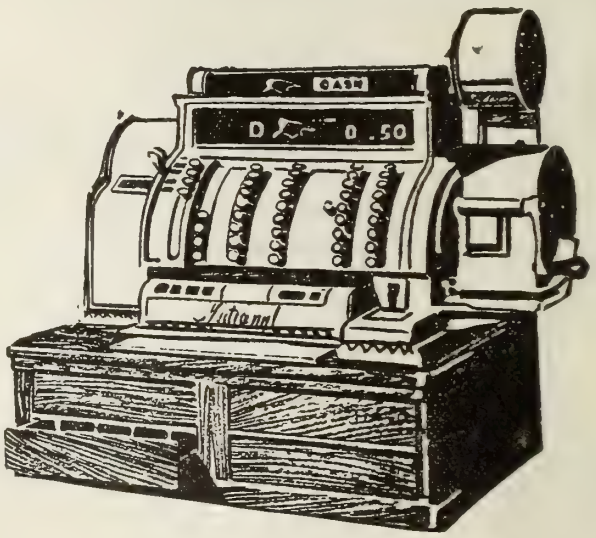
National Mfg. Co., Sterling, Ill.

If interested, tear out this page and keep with letters to be answered.

Full Profits

IN these days of narrow margins, a merchant must secure all his legitimate profits. Losses mean failure. Mistakes and carelessness cause losses. If a charge transaction of one dollar is lost or destroyed, the profit on a ten dollar sale is eaten up.

Safeguard profits. Install the National Cash Register system for protecting retail merchants. The electrically operated National Cash Register and the National Credit File are earning their way in thousands of stores to-day. Write us for full information. This request will place you under no obligation.



The National Cash Register Company

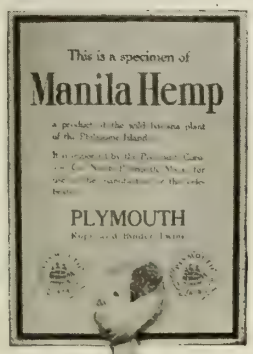
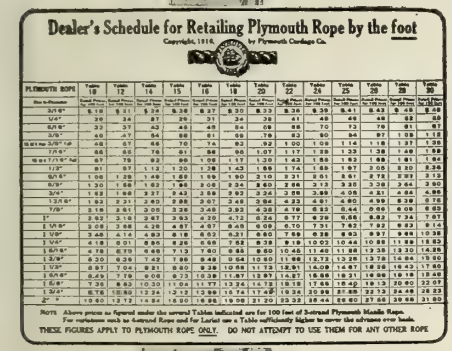
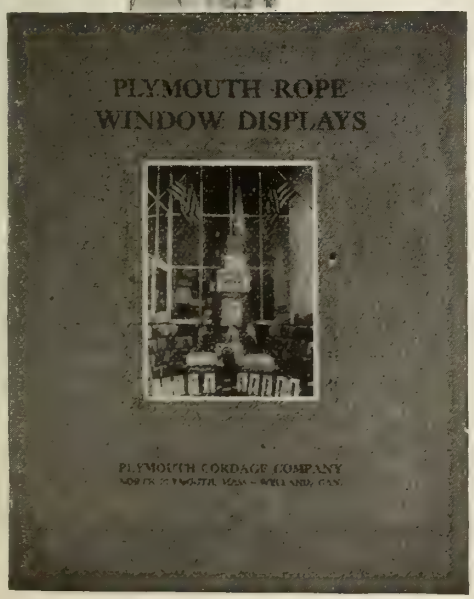
Toronto **Ontario**

What Plymouth is Doing for the Dealer







There is a very vital and helpful selling service back of you if you handle Plymouth Rope. This service will enable you to increase your rope profits and to better satisfy your customers.

Plymouth Rope

has been known everywhere since 1824 as "the rope you can trust." It is becoming better known through aggressive advertising in many fields.

Plymouth is the only rope successfully sold on the "Rope-by-the-Foot" plan, a method that will return to you an increased profit and at the same time be more satisfactory to your customers.

The window displays suggested and the necessary materials furnished free will enable you to feature rope at the seasonable time. The consistent use of these displays has materially increased the business of many dealers during the past two years.

If you are interested in increasing your rope sales, in adding to your list of regular customers, write us for our "Rope-by-the-Foot" plan and our Window Display Service.

They are yours for the asking and wherever intelligently used will show an increase on the right side of the ledger.

Your Business Prosperity is closely related to the Success of

Canada's Victory Loan

YOUR business prospers because your customers,—farmers, mechanics, clerks, workmen and others—have plenty of money to spend. They have plenty of money to spend because business has been good.

And business has been good largely because of the millions upon millions of dollars spent by Great Britain for Canada's natural, agricultural and manufactured products.

But Great Britain needs credit, if she is to continue spending money in Canada. Otherwise she will buy where credit is available.

Canada's Victory Bonds are being sold to the people of Canada in order that the credits Great Britain requires may be established.

This money, loaned by the people of Canada, and re-loaned by Canada to Great Britain, will find its way back to the people of Canada.

The relation between your business prosperity and the success of Canada's Victory Loan is, therefore, very close indeed. In fact, your business cannot continue to prosper as it has been prospering, unless the issue of Canada's Victory Bonds is a complete success.

Canada's Victory Bonds, moreover, are an exceptionally good investment. They earn a good rate of interest; the principal is secured by the signed pledge of Canada backed by all the resources of Canada. Any bank will lend money upon their security alone. And the Bonds can be sold at any time.

INVEST YOUR MONEY IN CANADA'S VICTORY BONDS

And take every opportunity to explain to your customers how necessary the success of Canada's Victory Loan is to their own, and their country's prosperity.

It is the part of wisdom to do so because of the reasons given. And it is a patriotic duty because Canada needs money so that she may continue to provide her fighting forces with food, clothing and munitions necessary to keep on fighting shoulder to shoulder with Great Britain and the Allies until victorious peace is achieved.

Your Banker will help you to BUY CANADA'S VICTORY BONDS to the fullest possible extent.

Issued by Canada's Victory Loan Committee
in co-operation with the Minister of Finance
of the Dominion of Canada.

LITTLE WORDS WITH BIG MEANING

Quality

According to "Webster," Quality is "an excellence of character; natural superiority."

Service

Webster's definition of "Service" is; "The performance of labor for the benefit of another."

We use these words advisedly—fully understanding their definitions—and realizing the obligation we place upon ourselves by their continued use in connection with our products of Iron and Steel, and our attitude to the people we serve.

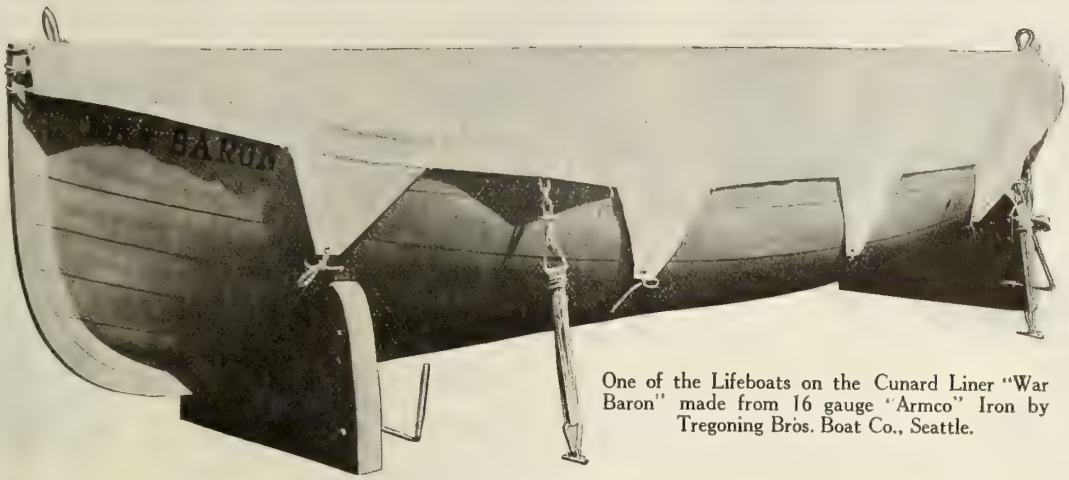
Pure Iron For Long Service



One of the Lifeboats on the Cunard Liner "War Baron" made from 16 gauge "Armco" Iron by Tregoning Bros. Boat Co., Seattle.

Purity, Evenness and Density

are now, as always, the qualities of durable iron.

In these, Armco (American Ingot) Iron is unequalled among the products of modern furnaces. Its composition is practically the same as that of the pure, old fashioned iron of our grandfathers' days. The experience of thousands of users during the past ten or twelve years points to the conclusion that it will render similar service.

From a photograph of nails taken from the hull of the Steamer "Silver Lake", sunk in the Osage River in 1863. Sound and strong after more than half a century in shallow water. Analysis shows 99.834% Pure Iron—very low contents of Carbon, Copper, Sulphur, and Manganese.

AMERICAN ARMCO INGOT IRON

The trade mark **ARMCO** carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

The American Rolling Mill Co.

Canadian Export Trade Prospects

Stability of Industry During Readjustment Period Guarantees High Standard of Manufacture — Introduction of New Industries, Capital and Immigration Increase Ability to Successfully Cope With Export Trade.

THE undisturbed stability of Canadian trade and industrial conditions under the trying times of the past few years of war is sufficient evidence of the high plane of efficiency in which Canadian industries operate. A big readjustment has been effected in the industrial life of the country during the past three years, and a very different application of manufacturing resources has been necessary in order that war requirements might be met. Despite these circumstances, which alone would be sufficient to establish chaotic conditions in a less efficient field, Canada's industry has developed rapidly and undergone several readjustments with little friction and no loss of prestige.

Canada's trade reports give evidence of a healthy condition of affairs indicating fully that manufacturing is the country's foremost resource. This stage has not been reached except through the medium of efficient operation and the manufacture of only high class goods. Canada's industries to-day are turning out goods that hold the field against all comers in regard to quality, and this is the reason for the good reception which Canadian merchandise is receiving in the markets of foreign countries. Canadian manufacturers are endeavoring to the best of their ability to meet the demands of export trade and some encouragement has been given them by the enthusiasm with which their goods have been received in far away parts of the world. It has long been recognized that quality is the outstanding requirement in order that the merchandise produced by any country might establish itself in foreign markets, and Canadian manufacturers are content that on this basis Canadian goods will soon be foremost in respect to export trade. To attain this end Canadian factories have been provided with all up-to-date facilities and efficiency is the watchword of industry.

Value of Grain Crop Unprecedented

An abundant field crop has been harvested in Canada this year which will guarantee the maintenance of good trade conditions for some time to come. Crops of all kinds this year are estimated in value at over one billion dollars, representing the largest price returns ever made for a crop. With a world wide need for grain and high prices prevailing it is quite evident that Canada is to be guaranteed a high place among the nations. Canada's automobile industry is also reaching extensive proportions and so important a branch of commercial life is this regarded, that United States firms are seeking to establish a connection in the field. The capital invested in automobiles in Canada at the present time is variously estimated at $135,000,000. New factories of a high class nature are being rapidly constructed to meet the ever increasing demand for automobiles. This demand increases trade in many other respects and the wealth of capital involved reflects through all other branches of commercial life.

War Conditions Develop New Industries

The shell-making industry in Canada has come and almost gone. Canadian industries have executed large orders for shells for the various Entente nations engaged in the war and have attracted much wealth to the country in this connection. Now that shell requirements have to a large extent been met, some industries are returning to normal peace-time status, though others have secured war orders for other branches of manufacture such as shipbuilding, locomotive construction, etc. The readjustment of factories has been completed without difficulty and has introduced many new industries as well as giving others a permanent basis for future operations. Shipbuilding is being carried on in Canada now on a scale never before attempted. Large numbers of wooden, steel, and concrete ships are under construction, and large sums of capital are represented in this and allied industries.

Phenomenal development has attended all branches of Canadian industry under war-time pressure and with the attraction of much capital to this country it is with no hesitation that we can say Canadian trade and commercial conditions are being elevated to a plane where they will surpass the post-war record of many of the leading nations of the world. Export trade is one of the biggest factors involved in such development and therefore the work of establishing a good connection with high class products in the foreign markets of the world is receiving the earnest attention of Canadian manufacturers.

Up to the end of 1916 Canada received war orders amounting to $1,100 000,000, and it is estimated that the amount will be at least $500.000,000 during 1917. Some of the orders received have been filled by subletting contracts in the United States just as Canadian manufacturers, according to capacity available, are getting a share of the war orders placed by the United States Government.

Tremendous Expansion of Export Trade

As result of these war orders there has been a tremendous expansion of Canada's export business, the total having increased from $430.000,000 in 1913-14 to nearly $1.200,000,000 in the year ending March, 1917—an increase of 180 per cent. The expansion in manufacturing has necessitated large imports of raw materials. During the past year the

total merchandise imports reached $845,000,000 as compared with $635,000,000 before the war.

Canada's sales abroad, however, have increased much faster than her importations, and during the past year she enjoyed a foreign trade surplus of $344,000,000, while as late as 1912-13 there was a deficit of over $300,000,000.

While it is known that after the war Canada's export trade will suffer a slight and temporary setback through the cutting off of the purchase of war supplies by foreign countries, there is sufficient evidence, in the ease with which readjustment has already been made, that the loss will be only temporary and will be followed by a larger export trade than ever. In this connection several favorable factors stand out prominently. In the first place it is known that during the ten years before the war immigration to Canada amounted to about 2,500,000 persons, mostly from Great Britain and the United States, and that capital from Great Britain was invested in Canada to the extent of $1,500,000,000. The fact that the period of development then begun is far from completed suggests that Canada will still be attractive to foreign capital and population after the war. In the second place the railroad trackage already laid in Canada is capable of supporting a large increase in population and industrial development.

The recent improvements in the banking system of the United States will facilitate American investment abroad and the mutual interests in commerce and similarity of ideals and institutions will encourage the investment of American and other capital in Canadian industries. Speculative inflation has, to a big extent, been eliminated from the Canadian economic situation, and prospects of a period of rising values throughout the Dominion will stimulate an influx of both population and capital. The war-tested quality of the economic leadership in Canada can also be taken as a satisfactory guaranty that the opportunities for development in Canada are being used to the utmost by manufacturers who will thereby be placed in a better position to devote even more energy to meeting the demands of export trade than at present.

Healthy Finances Indicate Good Trade Conditions

The trade resources of a nation are based to a very great extent upon that nation's financial standing among the countries of the world; and the ability to carry on successfully an export trade depends to a large extent upon the nation's credit. Apart altogether from the indications of wealth in Canada to be found in the acceleration of certain industries and the production of much wealth in the products of the soil, it is evident in the manner in which Canada has rallied to the cause of raising money for charitable purposes and for war necessities that a very healthy condition of affairs prevails in the nation's financial resources. Canada has borne her share of the financial burden of the war with comparative ease, and the outlook is that, though future large funds to be raised will undoubtedly constitute a drain upon resources, they will not disturb in the least the economic stability of the country. Canadians as individuals are practising thrift and economizing and saving in order to invest every cent possible in war loans. In this way it is possible for Canada to accumulate sufficient reserves to pay her way under the present or even more exacting circumstances.

It is not every nation in the world that can make such a statement; and, indeed, in some cases the meeting of war expenditures is draining the vital resources of nations so that it will take years to return to their former standing as trading nations. Canada's record under war conditions shows nothing but development in industrial, agricultural, and commercial life. This growth is the representation of strong financial support, and it is fully evident, therefore, that Canada is, and will continue to be, in a very enviable position to maintain trade conditions at normal and to be in a position to cater to the demands of other less fortunate nations at the conclusion of the war. Canadian merchants are preparing for this period and bending their energies to look after the requirements of export trade.

AUTOS FROM U. S.

Canada Principal Export Market For U. S. Pleasure Cars

Canada's large importation of United States passenger motor cars is indicated in the returns for the fiscal year ending June 30 last, showing that United States manufacturers shipped to this country a total of 14,421 machines valued at $11,143,740. In addition Canada bought 636 United States commercial automobiles for $945,047. Total expenditures for United States machines therefore totalled over $12,000,000 in the year. While Canada's investment in United States passenger cars was nearly four times greater than that of any other export market, Europe offered the best field for commercial automobiles; the United Kingdom bought 6,525 cars for $17,061,105, France 4,264 cars for $17,864,502, and Russia 1,733 cars for $4,428,979.

A typical threshing scene in Western Canada Labor shortage throughout the Canadian West, known as "the granary of the Empire," has necessitated the adoption of new methods of threshing as seen herewith. Canada this year harvested the most valuable crop in its history, amounting in all to about one billion dollars. Already the effect of this bountiful crop at high prices has been felt throughout the commercial life of the country and has stimulated industry and trade.

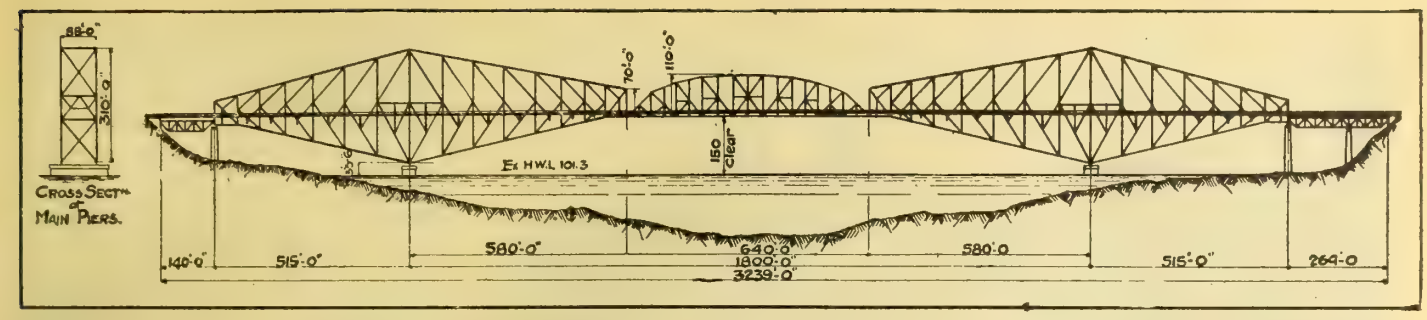

Diagram of Quebec Bridge superstructure giving principal dimensions.

Completion of the Quebec Bridge

After eleven years of unremitting toil, painstaking perseverance and overcoming of seemingly insuperable obstacles, Quebec Bridge is now a unit structure uniting extensive provinces on the south side of the River St. Lawrence with the main portion of the Dominion. Heartbreaking disasters failed to shake the determination of the builders, and for years to come the structure and the men who built it will be the objects of endless eulogy.

LIKE a star passing across the meridian that records an epoch in the movement of the celestial bodies, the final connecting of the centre span of the Quebec bridge marks an achievement in engineering feats that will stand out as one of the most remarkable of its kind ever attempted.

Despite the hazardous nature of the enterprise it is a noteworthy and commendable feature that, with the exception of the loss of life that accompanied the falling of the span last year, the fatalities or even serious casualties have been surprisingly few. Boatmen were kept constantly in the river, during the whole period of erection, immediately below the bridge so as to rescue anyone who might inadvertently fall into the river. The efforts of the company to provide comfortable and attractive camp life for the men have been greatly appreciated by the many workmen and have doubtless been a restraining and beneficial factor in influencing the character of the men and assisting them to exercise more than ordinary care in the performance of their varied and dangerous duties.

Owing to the climatic conditions, and the wide range of temperature between midsummer and midwinter, which may be anywhere from 100 to 125 degrees F., about 30 inches has been allowed for expansion and contraction throughout the entire length of the bridge. It is expected that three years will be required for the painting of the complete structure, and when the gang of painters have finished at one end they will immediately start at the other, thus assuring a permanent job for several workmen in order that the steel work will be sufficiently protected from the effects of the weather.

Forth Bridge Comparison

In reviewing the Quebec bridge, undoubtedly the greatest achievement of man's genius in the spanning of marine highways, the mind naturally reverts to its nearest rival, the Forth bridge, built over the Firth of Forth near Edinburgh. This is the next greatest structure of its kind in the world and comparisons are, therefore, interesting. Total cantilever of the Quebec bridge, including centre span, is 2,830; that of the Forth bridge, including two spans, 2,349 feet. Width of channel between the main piers, 1,800 feet for the former against 1,710 for the latter. The Quebec bridge is designed to carry per lineal foot, exclusive of its own weight, approximately 14,000 pounds, the Forth bridge a weight of only 4,480 pounds per lineal foot. The total weight of steel used in the construction of the Quebec bridge is approximately 66,000 tons; that of the Forth bridge 57,000 tons. Weight per lineal foot for the cantilevers, 48,300 lbs. on the Quebec, and 21,360 lbs. on the Forth. Greatest depth of the main piers below high water is 101 feet for the Quebec bridge and 87 feet for the Forth. The weight per lineal foot of the Quebec bridge is 2.3 times that of the Forth bridge. The load for which the Quebec bridge was designed is 3.1 times greater than that of the Forth bridge, while the prescribed test load for the former exceeds that for the latter about 4 1-3 times. The centre span of the Quebec bridge is the longest in the world and is approximately 100 feet longer than either of the spans that unite the cantilevers of the Forth bridge.

Brief History of Construction

The enormous structure that now spans the St. Lawrence is the successful fulfilment of a vision that has been in the minds of nation builders for nearly three-quarters of a century. As far back as 1852 a project for a bridge over the river at or near Quebec was considered, and again in 1884 designs were prepared and plans submitted to the Quebec Board of Trade for a bridge at about the present site, but no definite ac-

The completed bridge and its builders From left to right: W. P. Copp, Col. C. N. Montserrat, E. C. Kerrigan, H. P. Borden, Phelps Johnston, E. H. Pacey.

The span suspended from the bridge after scows floated away

tion was taken until about 1900, when the Quebec Bridge and Railway Company located a site near Cap Rouge and took steps for the erection of such a structure; this initial site is virtually that of the present bridge. The width of the river at this point is the narrowest between Montreal and the sea and is approximately six miles above Quebec; the distance across at mean water level being about 2,000 feet. In 1900 the company awarded contracts for a structure of the cantilever type, having a span between the main piers of 1,800 feet. After seven years of fabrication and erection, the superstructure, which was then about half completed, collapsed into the river, carrying with it from sixty to seventy of the workmen.

Following this disaster the reconstruction was undertaken by the Dominion Government, then under the leadership of Sir Wilfrid Laurier, and the task was assigned to the Railway Department, with M. J. Butler as deputy minister and chief engineer. A commission comprised of such eminent men as Henry Holgate, Professor J. G. G. Kerry, of McGill, and Dr. Galbraith, of Toronto University, were appointed to examine and report on the fallen structure. Following the presentation of this report it was decided to select a commission who would have full charge of this mammoth enterprise. The parties named for this responsible work were H. E. Vautelet, of Montreal, chairman; Ralph Modjeska, of Chicago; and Maurice Fitzmaurice, chief engineer of the County Council of London, England. After a year's study of the problems involved the last mentioned member of the commission resigned, and for some time difficulty was experienced in agreeing upon a suitable successor to Mr. Fitzmaurice. However, after some negotiations Charles McDonald, formerly of Gananoque, Ontario, was induced to act on the board until such time as a contract had been signed. Tenders were requested, either on the designs then in the hands of the board or on plans prepared by the tendering companies. Upon the acceptance of the designs submitted by the present contractors of the bridge, the St. Lawrence Bridge Company was organized and the erection of a suitable plant was immediately proceeded with at Rockfield, Quebec, situated on the Island of Montreal, this location offering ideal facilities for fabrication and shipment to the erection at the site. Despite the nature and the magnitude of the enterprise the work of construction progressed with remarkable rapidity so that in the summer of 1916 the work upon the two cantilever arms had practically been completed, with the erection of the centre span being accomplished simultaneously with that year's work. The centre span, the link that was to connect the two protruding arms, was erected at Sillery Cove about three miles below the bridge site, and floated into position on September 11 of last year, but after being successfully floated to the site and supported from the hoisting chains, the failure of one of the main castings caused the lower support to slip from its position and within less than 10 seconds the entire centre span had been released from its remaining supports and was resting on the bed of the river a mass of tangled and useless metal.

The final attempt, which was successfully achieved during the week of September 16, marks the culmination of effort that has taxed the engineering ability and utmost resources of those associated with the work of constructing the bridge from the very date of its inception. To the average layman it is difficult, if not utterly impossible, to conceive of the magnitude of this great and mighty undertaking, and to appreciate, even in a small and unlearned measure, the many problems of design and construction, it would be necessary to view the enormous structure as it now extends from one shore to the other, a fitting monument and everlasting memorial to those engineers whose ability has made this feat possible. There yet remain many minor, but essential, details to complete before the bridge is finally finished and ready for traffic, and it will probably be the spring of 1918 before the structure is officially opened, although it is anticipated that sufficient progress will have been made during the present month to allow trains to cross over. It is probable that very few of the vast crowds that patiently watched the massive structure mount slowly into position fully realized the chief object of the bridge and the inestimable importance that its successful completion would mean to the Dominion and particularly to that portion of the country immediately surrounding the bridge location. In addition to being the last link that will form the unbroken highway of the Transcontinental Railway from ocean to ocean, the bridge will provide communication to either side of the river for ten other converging transportation companies, the transferring of whose freight has until now been accomplished by railroad ferries. With the completion of such terminals as are now under construction and those contemplated, the increased facilities will eventually make the City of Quebec one of the leading railway centres in Canada.

The work has been carried out under the supervision of a Government Board of Engineers, composed of Messrs. C. N. Monserrat (chairman and chief engineer), Ralph Modjeska, and H. P. Borden. The St. Lawrence Bridge Company are the contractors for the superstructure, Phelps Johnston, president; G. H. Duggan, chief engineer; George F. Porter, engineer of construction; W. B. Fortune, superintendent of erection; and S. P. Mitchell, consulting engineer of erection; Works Superintendent Ladd being responsible for the fabrication.

BULK LEATHER ADMITTED TO BRITAIN

All bulk leather ordered previous to February 22, 1917, may now be imported into United Kingdom. Statutory declaration as to each specific order required by Department Import Restrictions.

Span partly raised. S.S. Quebec passing below north cantilever.

Canada's Strides in Shipbuilding

Activity Without Parallel—Building of Wooden Vessels Revived — Concrete Ships a New Departure—Details of Concrete Construction—Speed in Building a Feature.

WITH the possible exception of munitions making, no other industry in the past decade or more has evidenced such rapid and widespread development as has shipbuilding, particularly for ocean service. Canada is involved in the abnormal activity arising therefrom, both wood and steel construction being prominent in the list of vessels under contract in her shipyards. The enormous demand for steel for munitions purposes has been an important factor in the revival of wood shipbuilding, and needless to say will act as a powerful stimulant while the war lasts.

Arising out of the exigencies of the situation created by enemy undersea boat activities and the large measure of success resulting therefrom, nothing is being left to chance. Every effort is being concentrated and every facility is being requisitioned, utilized and provided by Britain and her Allies to procure and intensify vessel construction to such a degree that the replacement of sinkings will be readily and continuously maintained and the futility of her persistence in submarine terrorism demonstrated to Germany.

Shipbuilding Activity Without Parallel

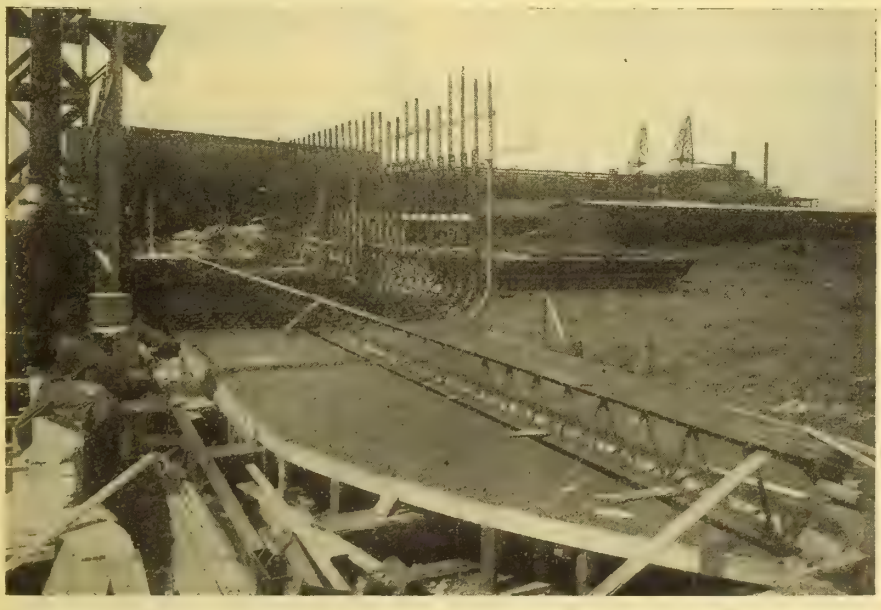
The devastating character of this colossal war and the magnitude of the effort required for its successful prosecution have unearthed and necessitated the consideration of many vital problems, the solution of which calls for the skill and concentration of every department of commercial and industrial enterprise. During the first two years of hostilities, the essential need was unmistakably that of men and munitions, but the events of the past nine months or more have demonstrated that the most vulnerable point in our offensive might well be the abnormal loss of our ocean tonnage, because reducing if not wholly checking its effectiveness. The possibility of such a contingency has been fully realized for some time. As a result, plans have been matured and given practical exemplification to offset any such disaster; hence a shipbuilding and marine engineering organization and activity without parallel in the industrial history of the world.

Wooden Vessel Building Revived

The construction of wood vessels, an industry that had almost become a lost art, will go on record as not the least among the notable developments of these strenuous times. The length of time that it formerly took to build such craft was, and still may be reckoned as, an undesirable feature whether in an emergency or otherwise. The past, present, and immediate future outlook for steel construction materials, offering little prospect of relief, however, at least in anything like the quantity desired, together with the growing urgency for "bottoms," constituted an argument in favor of wood construction as supplement to the other that could not well be passed up. Again, scarcity of experienced ship carpenters—those of the period a generation or more back—compelled attention by those directly concerned in ship production to be given such matters as standardization, and even to new materials of construction, the ultimate aim being rapidity of output, consonant, of course, with quality and efficiency, in transportation service.

Concrete Ships a New Departure

It is not surprising, therefore, to find that considerable interest is being centred on concrete ship construction, and that not a few vessels of various dimen-



Concrete shipbuilding at Montreal, showing steel reinforcing frames partly erected.

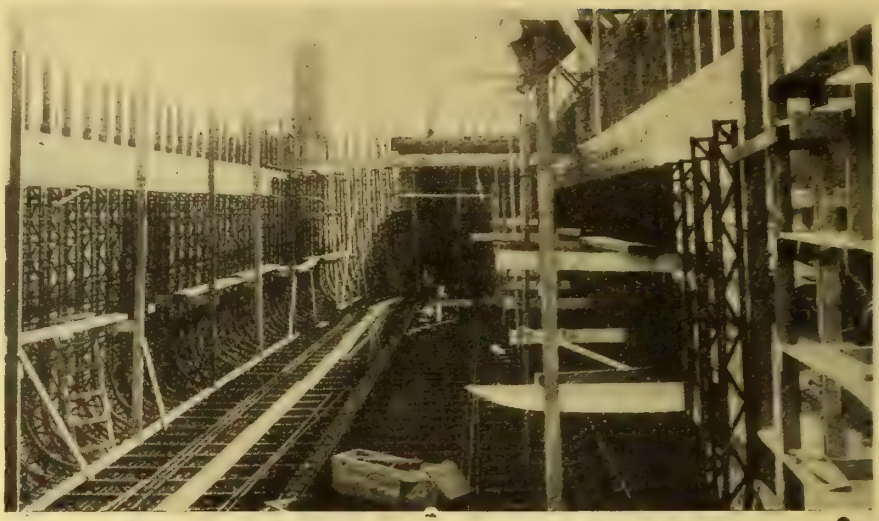
sions and tonnage are at present being built. Whether the scope of service of such craft will attain to worth-while, or steel ship competitive, importance is in the meantime problematical; however, the odds are all against such an eventuality for a number of reasons. Their construction is expressive of the spirit of the times, and those responsible for the enterprise merit the greatest possible measure of success. The following particulars of a self-propelling concrete ship being built on the south shore of the Lachine Canal, at Montreal, for demonstration purposes, will, together with the illustrations on these pages, enable a fairly intelligent idea to be formed of the detail and general features.

Length over all, 125 ft., beam, 22 ft.; height from keel to main deck, about 13 ft.; draft loaded, approximately, 9 ft.

Details of Concrete Construction

The steel framework consists of fabricated ribs of angle bar diagonals, five inches at the upper ends and gradually widening to a depth of 14 inches where they pass through the center keelson. They are set at 27 inches apart throughout the entire length of the vessel. In addition to the main keel, which has an approximate cross sectional area of 220 square inches, there are two sister keelsons located midway between the centre keel and the bilge keelson, these latter as well as the sister keelsons having a cross sectional area of about 144 square inches. All these members are suitably reinforced with longitudinal steel bars wired to the cross ribs. The bow and the stern posts are a continuation of the central keelson, the outer portion of the bow being provided with a heavy angle iron, for a cut-water.

After the ribs were placed in position, the outer form was built up from the main platform which supports the entire structure. This platform rests upon a large number of 6-inch hardwood rollers, which in turn rest upon heavy timbers sunk in the ground, the idea being to facilitate the launching, the exact procedure for which has not yet been decided. After the placing of the inner forms,



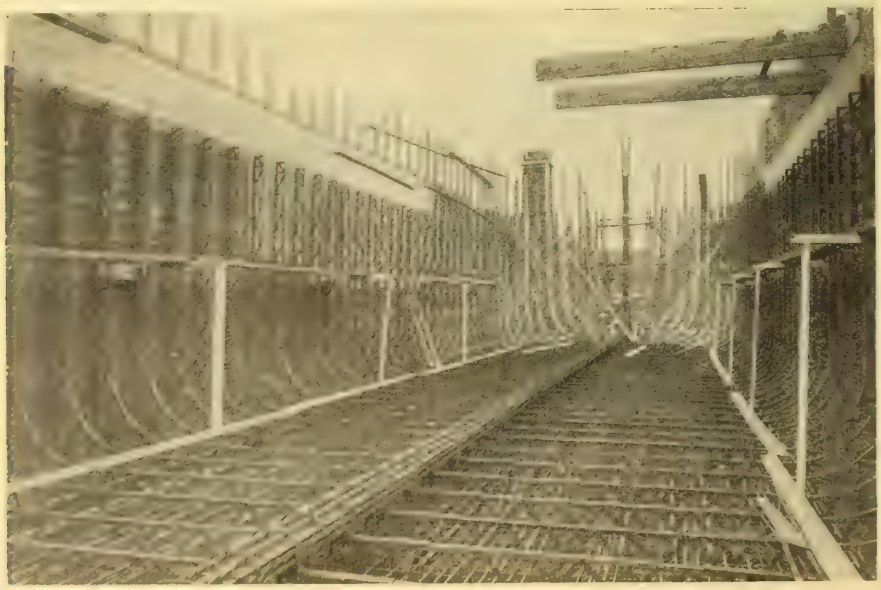
Concrete shipbuilding at Montreal, showing forward portion of outside form in position.

the concrete was poured by means of the hopper and shoot shown in one of the illustrations, the concrete being distributed to the various sections by hand. The thickness of the concrete between the ribs runs from 3 inches above the deck to a thickness of about 5 inches on the bottom of the hull, the approximate dimensions of the reinforced ribs being 30 square inches at the top to about 75 square inches where they join the center keelson.

The vessel will be equipped with a 150 horsepower, single screw type marine steam engine, set upon a concrete foundation and located close to the stern. This has been chosen to minimize vibration and also to provide additional cargo space. The tube for the propeller shaft, the tube for the rudder shaft, together with all tubes for hawsers, etc., are embedded in the concrete hull.

Speed in Building a Feature

Some conception of the possibilities and advantages that lie before this particular class of ship construction, if the same should prove successful in service, may be gathered from the fact that the work of laying the foundation beams was started on August 15 of this year, and it is expected that the vessel will be launched early in November. The pouring of the concrete from the keel to a point above the water line was accomplished in about 48 hours, and the remainder of the hull to the top of the freeboard in a little less time. Owing to the nature of the work it was necessary to pour continuously so as to avoid the possibility of defects in the structure. This vessel will be capable of making about eight miles an hour, and will have a displacement of approximately 400 tons (light). The plans were prepared by C. M. Morssen, C.E., and Prof. E. Brown, of Montreal.



Concrete shipbuilding at Montreal, showing reinforcement detail.

GOVERNMENT MAY OPERATE IRON PLANT

That the Port Arthur blast furnaces, better known as the plant of the Atikokan Iron Company, will be operated under government control, will be an established fact if the Port Arthur city council has its way. A communication is being sent to Sir George E. Foster asking him to have the plant and mines operated under government supervision. Action is asked in view of the fact that the Atikokan Iron Company has been communicated with several times during the past two years, with a view of getting the plant at Port Arthur in operation, and no satisfaction has been obtained; also because the United States has placed an embargo on steel and iron coming to Canada, which places the iron and steel industries of Canada in a very poor position as to material.

A letter will also be written to the Atikokan Iron Company executive, saying that the city of Port Arthur is not satisfied with the very abbreviated statement furnished, and that the council would like to know where the original amount of $700,000 was pledged and for what purpose. The council also desires to obtain a detailed statement of bills payable to the banks for $612,900, how the special loan of $75,000 was used and how accounts payable, amounting to $11,201, were expended.

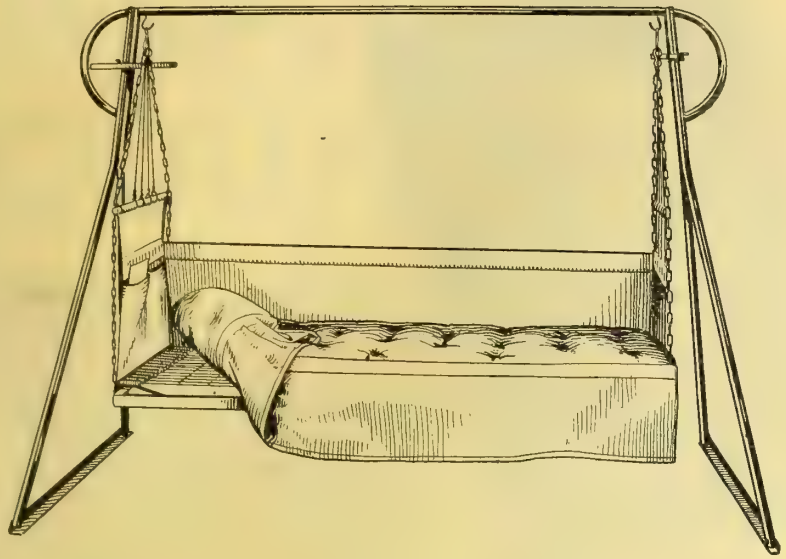
Hammock buyers will be more critical next year

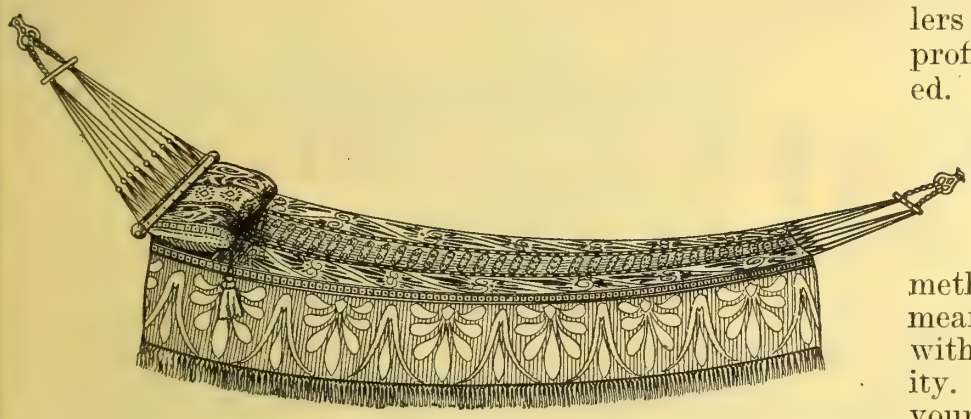


Scarcity of raw materials is forcing up hammock prices which means that you face the problem of whether to buy "cheap" lines, or pay the price for quality. You'll find plenty of short-sighted manufacturers and jobbers who'll cut quality to keep down price. But you must reckon with the public, and you know that the present era of high prices has made the public highly critical.

There is a price advantage to you in our direct-to-dealer selling.

As of old, value is the determining factor in every sale. Give the public value and you'll get the price.

By placing your 1918 order with one of our travellers next year's hammock profits will be safeguarded. We guarantee shipment as promised, quality as usual, and exclusive designs.



Our direct-to-you method of doing business means price concessions without sacrifice of quality. You'll be able to give your customers both the best price and the best quality. You'll be able to face any criticism.

Remember, your profits next year depend on your buying this year. Sign up when our traveller calls.

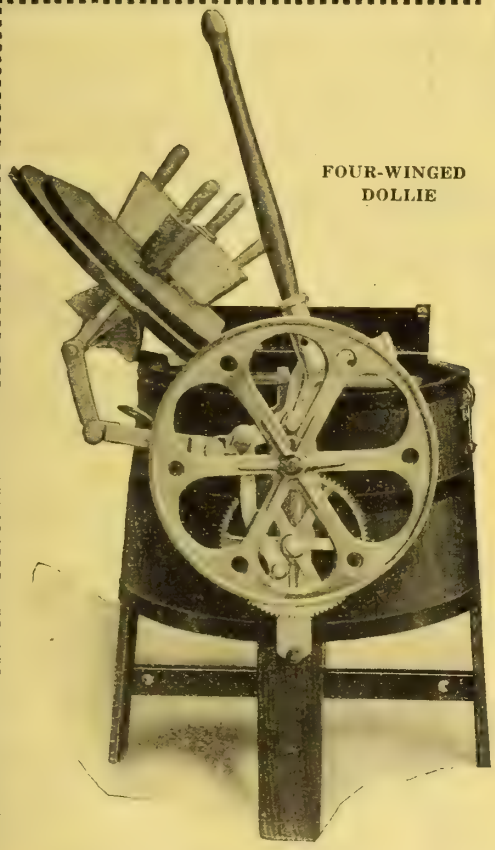
THE EASY-RUNNING BEAVER WASHER

THE "BEAVER"



FOUR-WINGED DOLLIE

JUST WHAT THE HOUSEWIFE NEEDS

A household facility that tends to lighten the burden of the housewife is always received with enthusiasm and if it is of real practical worth proves a great seller.

In the "Beaver" Washer you see a machine of genuine worth, a machine that takes the dread out of wash-day for the housewife. For it is so easy-running, that which was formerly an arduous task is made child's play.

And what's more it is NOISELESS. When a mother puts her baby to sleep she can go ahead with her day's washing without fear of awakening the little one, even though it be close by.

The "Beaver" Washer is ideal. Sell it and win friends and new business and make increased profits.

Four-Winged Dollie — Cover open, shows our latest Four-Winged Dollie. Represents another advance in modern washing machine construction.

CONVERTIBLE WASHER.

Another splendid feature is the flange pulley attachment for engine drive which makes this washer an ideal power machine still available, however, for hand operation.

Our line of washing machines include—electric, gasoline, water power and hand operated types. Pay good profits—write for prices.

Mr. Bruce's Counsel

SPECIFICALLY APPLIED, MR. BRUCE'S COUNSEL may be said to recommend that business men should read every week THE FINANCIAL POST OF CANADA, to inform themselves concerning current events in the realm of Canadian business and public affairs.

Frank E. Mutton, Vice-President of the International Time Recording Company, of Canada, wrote the following letter to the publishers of THE POST:

> **Attention, Editor:**
>
> Recently we sent you a subscription covering the delivery of THE FINANCIAL POST to each of our Sales Agents and Salesmen throughout Canada. This was prompted by the fact that, in our opinion, your paper is the best barometer in Canada of what is going on in the different industries from one ocean to the other in this country. Your paper contains information invaluable to any traveling representative of any firm.
>
> (Signed) F. E. MUTTON.
>
> Dated Oct. 12, 1917.

IN effect, THE FINANCIAL POST represents a Current Events Club, met weekly for the consideration and study of current affairs in Canada in relation to itself and the world at large. It represents the assembly of many, many surpassingly well-informed contributors who discuss intelligently, lucidly and proportionately, Canada's public and business affairs. No more stimulating and worth-while paper is published in Canada for the man who wants to be able to talk confidently, at the club, luncheon, board meeting, business council, public meetings, about Canadian public affairs.

THE price, $3, is nothing to the man who really wants to know. Three dollars spent for knowledge that multiplies a man's power and pleasure and satisfaction is a small, small sum to pay. We make our appeal for subscriptions to men who really want to know and who will take time each week-end to read profitably.

If you are willing to give this time, prove it by signing and mailing the coupon below

Talk Current Events

A Talk by H. Addington Bruce, Author of "The Riddle of Personality," "Psychology and Parenthood," Etc.

WHAT do you know about the doings in this great world wherein we live?

Do you try to form a really intelligent and well-considered opinion regarding events the world over?

Do you ever discuss their significance with friends and neighbors?

If asked what you think of any particular event, you are perhaps ready with an answer. Is your answer anything but a snap judgment, determined by prejudice rather than by reasoning analysis?

I put these questions not to be disagreeable, but because, if necessary, I want to spur you to appreciate the value that there is in discussion of current events.

Many people, fortunately, appreciate its value instinctively. Perhaps you are one of these. Many others are beginning to appreciate it.

This is shown by the growing popularity of clubs and classes on current events.

Only a few years ago such clubs and classes were almost unheard of. To-day most of our bigger cities have half a dozen of them or more.

In one city—Boston—a talented woman of my acquaintance draws an income of thousands of dollars a year from her leadership of current events classes.

Other men and women have similarly discovered that interest in current events is increasing so rapidly that they can well afford to organize classes like those conducted by the Boston woman.

Still, there remain many people—thousands of people—who never discuss current events. Many thousands more discuss only such events as come under the headings of "crime," "the theatre," and "sports."

These are the people I want to reach. They are the people I want to rouse to recognition of the practical helpfulness they will find in discussion of current events in general.

Current events clubs and classes might well be organized in every neighborhood, with weekly meetings to take up the outstanding happenings in international affairs, national politics, literature, art, music, science and industry.

Regular attendance at, and active participation in, these meetings will prove to be an education in itself.

It will enlarge the mental horizon and broaden the moral sympathies. By disciplining the mind to active thought it will raise the level of workaday efficiency.

It will make for a more alert, a more conscientious citizenship. It will give zest and color to a life which perhaps has hitherto been pathetically drab.

Unsuspected powers will be awakened. With a better grasp on the realities of life, the whole personality will expand.

One evening a week is certainly not too much to give to a discussion of the day-to-day developments in our wonderful world.

It may mean doing without an evening at cards or at the musical comedy, or at the dance hall. But this, after all, is not a terrible sacrifice.

And from the occasional talk over current events will come more profit than could possibly come from any number of evenings spent in card-playing, dancing, or listening to musical comedies.—Reprinted from the Toronto Daily Star.

"Home Comfort" Range

It's Wise to Sell a Single Model

A dealer acting as agent for the "HOME COMFORT" doesn't have to keep a big stock. We make only one size and one style. This simplifies matters a whole lot. It used to be, and still is, the custom for the dealer to put forward on his floor the simplest and cheapest model of a range, and to sell his customers this particular range. Then having made the sale, the dealer would proceed to induce the customer to buy extras. For this purpose, the more expensive models kept in the rear would be used for the purpose of demonstration.

Experience has taught a good many dealers that it is wiser to sell but one model, a model like the "HOME COMFORT." It saves time and money—dealers do not have to carry a large stock. This single model plan pleases the customer, too, and makes it safe and easy to make a choice.

We have made the "HOME COMFORT" the most easily sold range on the market. Write for agency proposition. It's a good one.

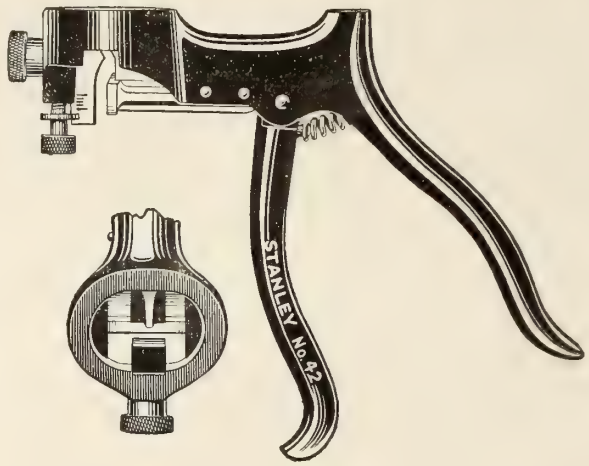
Stanley Tools



STANLEY "PISTOL GRIP" ADJUSTABLE SAW SET No. 42

This Saw Set embodies several unique and important features not heretofore seen in tools of this description.

The shape of the Body and Handle enables the user to operate the tool with great ease and with the least possible exertion, and the saw is held firmly against the gauge while the tooth is being set.

It can be readily adjusted by means of the knurled thumb screw to give a greater or less set to the teeth of the saw, according as the saw is to be used for coarse or fine work. As the anvil or part against which the plunger works is graduated, the same adjustment can be easily obtained for duplicate work.

The tool is so designed that the saw teeth are in plain view which enables the user to quickly adjust the tool to the tooth to be set.

The plunger and anvil are made of tool steel—hardened and tempered. All parts are carefully **machined** and are **interchangeable.**

The tool is given a fine black finish.

LACO NITRO LAMP

REPEAT ORDERS
Are Proof of Value

Every dealer realizes that manufacturers are constantly seeking to persuade him to stock, display, push, and sell their lines. Manufacturers seldom give, at least in the columns of the trade press, good and sufficient reasons why the dealer should do this.

In asking you to carry the

LACO NITRO LAMP "THE LIGHT THAT GIVES MORE LIGHT"

We present the following reasons *why* you should do so:

1. This is the season when Merchants and Manufacturers give the greatest amount of attention to proper lighting.
2. The rapidly increasing demand in Canada for the Laco Nitro lamp is the best evidence we can offer you that it "sells."
3. Jobbers and dealers who stocked these lights last year are ordering in larger quantities this year.

4. These lights render universal satisfaction. Every sale insures a repeat order and repeat orders mean *PROFITS.*

You cannot select a more opportune time—so act NOW.

Write your local jobber or to

Vol. 29 TORONTO, NOVEMBER 3, 1917 No. 44

500 p.c. Increase in Twelve Months

Third Floor Activity in Auto Accessories—Featuring Auto Accessories in One Department Brings Five Hundred Per Cent. Increase in Sales—Selling the Advertised Products—A Trip Through the J. H. Ashdown Hardware Co. Store at Winnipeg Reveals Many Interesting Features — The Addition of New Lines Such as Cameras, Fountain Pens, Phonographs, etc., Proven a Success.

IT is not always that a feature story can be started on the third floor of a hardware store, but here is one case where it is possible and worthy of note that one of the big successes attained in the merchandizing of goods is seen from this elevated position. And the line of goods which is obtaining such an impetus from its added space is automobile accessories.

In going over the remodeled store of the J. H. Ashdown Hardware Co. of Winnipeg, one of the most vital things which struck the writer was the space devoted to automobile accessories—a really new department, being only six months old. Before being moved to its present location, these goods were distributed throughout the store, though the principal stock was carried along with the blacksmith's supplies.

The department as now arranged occupies shelving which extends down the north side of the floor for about 30 feet, besides floor space the same length by about 18 or 20 feet in width. The shelving contains all classes of package goods, such as cementless patches, cements, vulcanizers, reliners, valves, radiator compound, polishes, etc., and presents as neat an appearance as any other department of the store.

Figure 1 shows a type of rack used for showing auto tires. This rack was made by the firm, has capacity for fifty tires of assorted sizes and being on casters can be easily moved about.

Two eight foot show cases are used effectively for making displays of various lines and tables are also utilized to show many of the smaller accessories. Underneath the tables larger lines such as auto jacks are in plain sight besides being available for those who wish to try them out. Gasoline engines of various grades and capacities are also shown in this department.

Pointing the Way to the Third Floor

Supplementing the newspaper advertising and window displays, there are attractive cards on all floors of the store indicating that auto accessories are car-

Some idea as to the size of the present auto accessory department in the Ashdown store may be gathered from the accompanying illustration. The method of showing tire pumps, jacks, tonneau chairs, and oils as seen in the immediate foreground, is decidedly effective. A big wall case, not shown in the illustration, now replaces the two silent salesmen shown at the extreme left, being used for an excellent display electric percolators, coffee pots, etc.

ried on the third floor. Near the elevator on the main floor stands a tire rack display which holds a complete wheel, an inscription on a card directing motorists to the department above.

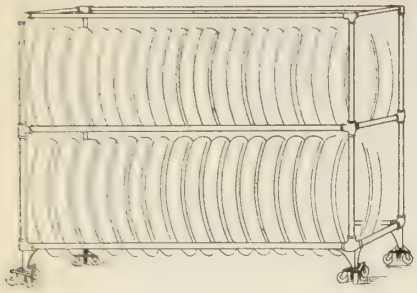

Fig 1.—Illustrating a tire rack which can be easily made by any hardware man. It is made of wrought iron pipe and the casters are the regular 3-wheel stove type.

Sales Increase Five Hundred Per Cent.

The manager claims that a conservative estimate places sales for this department five hundred per cent. bigger than they were one year ago. At that time, about two dozen lines comprised their stock. Now, he claims to have as varied and as well assorted a stock as anyone in the city.

Selling the Advertised Products

A point of extreme interest brought out was the effect of advertising. The manager states that by this means a demand is created for many lines, really novelties and their value questionable, which people come and ask for and must have, whether said products are meritorious or not. This means that these goods must be carried in stock, but at the same time great care must be exercised in their purchase as the sale may be so short-lived.

Window displays and newspaper advertising have done a great deal to attract interest to this department; and its phenomenal growth is really an indication as to how the retail hardware man stands in line for securing a big portion of this business.

Featuring the Electrical Department

The electrical department is also on the third floor, and this includes a show case which is a beauty. It is lighted by five sixty watt lamps and reflectors, has four glass shelves and mirrored backs, and contains a very extensive showing of coffee percolators, toasters, grills, chafing dishes and percolator sets. One of the features about this case is that a very intense light is used to get a maximum effect from the brilliancy of the display. It is a large case sixteen feet long, six feet high, and is not overcrowded. Tables covered with red felt are used for showing table lamps, desk lamps, shades, etc., and a special table is chiefly devoted to electric irons, the idea being that the customers can handle and see just what they are getting. Their electrical business covers the selling of these goods only, as they operate no contract department whatever for installation of fixtures, etc.

Stove Display Removed From House Furnishings

The south and east ends of the third floor are practically all devoted to the display of stoves, of which there are all kinds, coal and wood stoves and ranges, hotel ranges, laundry, gas, electric, and coal oil stoves, and heaters from the noted Quebec to the latest base burners. Even the sheet iron camp stoves are included as well as furnaces. Included with the stove display is a splendid line of kitchen cabinets, it being felt that these worked in splendidly with the stove department. These lines, it will be noted have been removed from the house furnishings, the line being big enough to "carry on" in a separate department of its own.

One of the New Lines Now Selling

Beds, mattresses, springs, and pillows have been added to this firm's stock during the past six months and sales have attained a splendid total. They occupy space in the center of this floor, and are very neatly arranged.

Getting Builders' Hardware Business

In the rear portion of the third floor is what is known as the contract department for builders' hardware. It is here that all big sales for these goods are handled and although their customers' convenience dictates that a pair of hinges or a coat hook be procurable on the main floor, when outfitting a house a customer is always directed to this department where a complete showing of all lines of lock sets, hinges, sash fasts, transom lifts, casement fasteners, etc., is conveniently and neatly arranged. It is claimed that sales are much more easily and satisfactorily made when prospects are away from the distracting influence caused by the constant flow of customers on the main floor.

The Main Floor—Using But Not Crowding Space

It may seem that the writer has departed from the usual procedure in outlining the departments on the third floor first, in preference to those on the main floor, but the remarkable strides made in the auto accessory department made this seem fitting. Completing the entire floor was then a natural consequence, but now the re-arrangement of main floor will come in for its measure of publicity.

Cut Glass and Silver-Plated Ware

It is not always that the space directly behind the show windows is used so effectively as the arrangement now prevailing in the Ashdown store calls for. On entering the store, immediately to the right, and backing the store windows, is an immense wall case displaying cut glass. This case, which is open in front, permitting of easy access, has a mirror back, the goods themselves resting on glass shelves. Occupying a similar position to left of the entrance is a case containing silver-plated ware, such as bake dishes, butter dishes, etc. The space thus occupied is really added display room, as it has never been utilized before.

Fountain Pens Selling Briskly

Right near the entrance, at the end of the cut glass display stands a display case containing fountain pens. Installed during the last few months, this line has proved a splendid seller. It is bound to be seen by every one on entering or leaving the store and the success attained with this line proves the drawing power of effective display and how easily, too, the hardwareman may add to his line of profit makers at little added overhead expense.

Horse Shoe Arrangement of Show Cases Excellent

In the centre of the main floor is an immense display of cutlery of all kinds in silent salesmen which are arranged in horse shoe style. The front portion of the horse shoe, facing the entrance, is devoted to a display of pocket cutlery, shaving accessories, scissors and other small lines. The cases comprising the sides of the horse shoe contain a big range of silver-plated flatware from the individual pieces to the many sets of cased goods. Cased goods are carried in sets containing from six to one hundred and forty-eight pieces.

The main entrance showing the display cases of Cut Glass and Silver Plated Ware on each side backing up the main windows. This display is seen by everyone on leaving the store and one side at least is noticed by those entering as they swing to the left or right. At the time this picture was taken the display case of fountain pens was not in place, but it now sits where the small table is shown.

Through the centre of this horse shoe a fixture has been arranged on which fancy clocks, brass ware, wooden trays, chafing dishes, etc., are effectively displayed. Glass doors to the shelving below do not interfere with the showing of many fancy lines. There are drawers in the portion of this central fixture nearest the floor which are used for surplus stock.

Enlarging the View

In rearranging the store, the central fixture running through this horse shoe was cut down to its present level of about four feet from a height of about eight feet. This had the effect of opening up the store wonderfully, as under the old arrangement one half of the store was shut off from view of the other half, creating the impression that there were two separate stores. The old arrangement also was conducive to confining the traffic more to one side of the store and there were many people who never saw the displays arranged on the other side of this central fixture.

For the Mechanic

The mechanic's tool department is on the right hand side of the main floor. Wall cases with glass fronts are utilized extensively, adding effectiveness to the display. For the display of plumbs and levels, planes, hand and breast drills, chain drills, floor scrapers, etc., a large sectional wall case having twenty-four feet frontage and being four feet high is used. There are four tiers of glass shelves, in addition to four wooden steps at the bottom which are utilized to show the many styles and sizes of plumbs and levels, this resulting in a very neat arrangement.

Above the wall case and extending its entire length are two rows of shelving which are used for surplus stock. Below the case, arranged on doors, is an exceptionally good showing of mechanic's fine tools, such as micrometers, calipers, dividers, combination squares, rules, try squares, etc. The shelving behind these doors is used for holding the stock of goods displayed on the fronts.

Beyond the wall case there are two sections of drawers about eight feet in all, the fronts of which carry samples of the goods inside. Next to these drawers is an exceptionally big wall case of saws.

New Saw Case a Dandy

This saw case is sixteen feet long and seven feet high, having a capacity for 125 hand saws as well as containing compass, hack, flooring, back and meat saws, etc. The arrangement of hand saws is decided novel and very neat. There are three brass rods arranged above each other on which the saws stand on their handles, the blades fitting into two inch slots sawn at an angle of forty-five degrees. This results in an instant survey of the style, length and number of teeth before handling. The question of showing to a customer does not necessitate touching the blade with the hands at all as each saw can be removed by the handle and replaced without disturbing the others. The other kinds of saws are placed on pegs in the usual manner of arrangement.

Circular Saws Displayed Effectively

On the top of this case is a display of circular saws. This is very effective and can be seen distinctly in one of the illustrations. The saws are supported at the centre by an upright, to which they are bolted. This way of holding the saw is very neat, as the customer cannot see how it is supported. The bolt runs through the bracket and mandrel hole.

Lighting of the saw case was a problem owing to its extreme height but this was solved by placing a very strong spot light in the ceiling about eight feet in front of the case. This throws the light over the entire case, revealing each saw clearly and much more distinctly than the ordinary method of inside lighting.

Beyond the saw case are wall cases and drawers, this display balancing the one at the front of the store as mentioned above.

Fronting the various cases are counters and silent salesmen over which sales are conducted. The silent salesmen occupy space at each end of the counters and carry neat displays at all times. The display of pliers in one of these cases is arranged on plush covered boxes similar to those used for the showing of scissors. Over hundred lines are displayed in this manner.

A splendid view of the main floor of the Ashdown store. In the immediate foreground the arrangement of the cutlery cases in horse shoe style is shown. It will be noticed that an unobstructed view of the mechanics' tool department over the central fixture is possible at its present height. The saw case, with the circular saws above, is clearly shown, and the arrangement of the wall cases and drawers is quite distinct.

On each end of the counters wire baskets are used for displaying odd lines on which a special run is being made. Price cards indicate how much the lines shown are being sold for.

Builders' and Cabinet Makers' Hardware

The small lines of builder's hardware, in addition to cabinet maker's lines are sold from the left hand side of the main floor. As mentioned above, any one wishing a pair of butts or other items in small quantities can secure same here without having to go to the contract department upstairs. The display of goods is made on the front of drawers which contain stocks of the lines thus shown.

For the Blacksmith

Beyond the builders' hardware the blacksmith comes into his own with a real attractive display of all lines which he uses in his business confined in a regular department. A wall case for the display of farriers' hammers, tongs, nippers, stocks and dies, etc., besides drawers and shelving, make this one of the neatest departments in the store. Forges and anvils are displayed on the floor, and the space underneath the stairs is used for a stock of hammer and hatchet handles, etc. All sizes of small bench vises are shown on a special display stand which sits on the counter.

Plumbing and Paint at Rear of Store

The plumbing and paint departments are in the rear of the store on the main floor. In the plumbing department floor space is utilized for displaying pumps, pump jacks, blocks, gasoline engines and many of the big items called for by the farming trade.

Four display tables with bins below are used to display cistern and force pumps along with other sundry lines. Sheet packings are hung on rollers which make it an easy matter to serve customers with any quantity required.

Fittings Easy of Access

Bins along the wall at the back of this department are used for carrying all sizes and styles of pipe fittings. A complete stock is carried and is easily accessible. The bins are tagged with the name and size of the fitting to eliminate any confusion in securing the proper thing.

Selling of Paints

The paint department which faces the plumbing lines gains prestige from the use of silent salesmen in which brushes of all kinds are neatly displayed. The many kinds of paint and varnishes are arranged on four sections of shelving, two deep, the lines being kept separate. The four sections in front are not built as high as those behind, enabling a display on those behind to be seen by customers at the counters.

Battery of Self-Measuring Pumps

At the rear of the department a battery of twenty-eight self-measuring pumps takes care of the oil business in a convenient and satisfactory manner. These pumps are supplemented by another gasoline pump, which leads to the outside of the store for filling cars at the curb.

Sale of Automobile Oils

Automobile oils are sold here as well as in the auto accessory department upstairs. The firm states that these are sold more in bulk than in small cans owing to the great saving in cost. The original outlay for oil will usually include a can but this is afterwards refilled.

The stock of glass is carried in the basement, and a speaking tube from the paint department is utilized for transmitting sizes to the man who looks after this. The glass is cut and packed for shipping in the basement and then sent direct to the shipping room, as few people carry glass with them.

Shipping Department by Itself

At the rear to the right is the shipping room. It is provided with an office at which bills are left, the shipping clerk making out the delivery slips from these. All goods are packed by the clerk who sells the goods, and the man in charge of the shipping room sorts them into the correct bins for the section of the city to which they are addressed. In some departments a small truck is used to collect parcels and when filled is run down to the shipping floor on the elevator. Such a truck is used in the house furnishings department. All heavy goods from upstairs are brought down on the elevator as well.

Motor Trucks Used Extensively

The firm has six motor trucks and one horse, the horse being used for delivery to places which the motor trucks cannot reach. The trucks back up to the shipping room doors and each driver gets the goods from his bin and sorts them as required for his territory.

House Furnishings and Sporting Goods

Two extremely important departments are included on the second floor, namely, the house furnishings and sporting goods. Both of these take a great amount of space, but the firm claims the sales justify all the room devoted to them.

In the house furnishings display tables are used extensively, the tops being covered with wire baskets in which wire goods and small lines of enamel and tin wares are shown. Each item carries a price card marked in plain figures. The space below the tables is utilized for the bigger items such as tubs, pails, etc.

It was noticeable that glass ware and crockery were carried and the firm intimated that they were going to enlarge considerably on their crockery stock. This is considered a good hardware line and they see no reason for passing up this business.

Woodenware occupies a considerable amount of room for the display of clothes horses, ironing boards, clothes baskets, washing machines and wringers, etc. The electric washing machines are

Two typical window displays at the Ashdown store. The attractiveness of the display of oils is no less apparent than the one of silver-plated ware. The inset shows one of the fleet of trucks used by this firm The windows were dressed by C. H. Smith.

included with the other lines rather than in the electrical department. Interesting indeed was the display of refrigerators which, though comparatively small now in comparison with their summer showing, revealed the fact that these sell, even in winter weather.

Aluminum, enamel, tin and copper wares are arranged on shelving built along each wall. One corner is devoted to a display of bathroom fittings, as it is claimed that this line is bought almost entirely by women.

Trunks and Bags a Success

It is not always that trunks and bags are sold by hardware stores but the success attained in this department has been a revelation to the management. The suitcases and club bags are arranged neatly on wall shelving which not only makes a good display but eliminates unnecessary handling which would result in having these piled up on tables, or on the floor. The trunks and bags are at the entrance to the house furnishings department.

Sporting Goods Now Being Rebuilt

At the entrance to the sporting goods department, which is at the rear of the second floor, the first thing to strike the writer was the display of phonographs. Phonographs in a hardware store? Even true and developing into a splendid proposition. Machines, which sell from $8.50 to $475, are carried, as well as a very large assortment of records. The space devoted to the phonographs is tastely decorated with pictures of noted artists, whose music, vocal and instrumental, is well known. A special tone room aids the customers in selecting records or the style of machine which they will purchase.

Turning to the left is a large wall case used for the display of shotguns and rifles, in which space is reserved for a continuous showing of 150 models. Light from a large window throughout the day and inside electric lighting at night keeps these lines prominently before customers at all times.

On the south wall cases are also utilized effectively for displaying dog collars, muzzles, whips, tennis racquets, golf clubs, etc. Hockey boots, tennis and athletic shoes of every description are given space on shelving at the rear of the south wall, and on the west wall a settee is conveniently placed for the use of those requiring to have their shoes fitted. There is a fine showing of hammocks, row boats, canoes, etc., occupying a large amount of space along the west wall.

New Rectangular Display Case Effective

The recent improvements embrace the building of a rectangular display case in the centre of this department. Floor space occupied is about 40 x 15 feet. The display space is about 30 inches in height and 12 inches in depth above a mahogany-finished base. Such lines as cameras, dumb-bells, boxing gloves, vacuum bottles, playground and indoor baseballs, mechanical toys, roller skates, bicycle accessories, hunting knives, reloading tools, small bore rifles, playing cards, checker boards, etc., are all given added attractiveness by this new arrangement.

Within the enclosure made by this rectangular case shelving has been conveniently arranged for the carrying of stock.

Go-carts, express wagons, velocipedes, etc., occupy space on the floor, a showing many styles and sizes being made. Every inch of space is used, and it might even be noted that above the wall cases there are excellent hunting pictures, which give a touch of realism and add materially to the atmosphere of completeness.

As Seasons Change—Also Goods

As the seasons change, of course, the displays will be rearranged, and this should be easily accomplished when space is available to such a degree. Even now the layout for skates, hockey sticks, toboggans, snow shoes, etc., is planned for the winter trade, and in another month's time this department will present an entirely changed appearance.

Trying Out the New Lines

Throughout the above, it will be noticed mention has been made of several new lines which have been added from time to time. These include fountain pens, beds, springs and mattresses, watches and clocks, trunks and bags, cameras, and phonographs and records. Each of these lines has proved a success, due largely to advertising, both newspaper and window display, backed up by neat store arrangement.

To illustrate how attention is directed to these lines in different ways, a recent newspaper ad., which this store ran on shaving utensils, carried a panel in which mention was made of these new goods under the following catchy caption: "Things unusual for a hardware store, but they're here." Then a list was given as enumerated above.

Making Use of the Windows

The window displays which the Ashdown store have are decidedly attractive, two typical ones being reproduced herewith. Considerable time is devoted to their arrangement, and their value, from the store management's standpoint, may be estimated when it is stated that the entire front and over half of one side is utilized in this way. A space of about 42 inches above the display windows, having a glass frontage to throw light into the store, is now being used to display lines like automobile tires, etc., which will not affect the light, and still supplement displays in the regular windows.

Altogether, the Ashdown store is a splendid tribute to the development of the West and the success attending their experiments with new lines is well worth noting. A 500 per cent. increase in the sale of auto accessories, their claim as to sales of watches, the inclusion of fountain pens, cameras and phonographs, all point to the greater development of the retail hardware store and the place which the hardware man can develop in the business life of his community.

Possibilities of Trade With Alaska

United States Government Likely to Requisition Ships on Alaskan Route—Canadian Transportation Companies Watching Developments — $100,000,000 Trade Involved—Virtually a Home Market for Canadian Manufacturers.

RECENT advices indicate that the United States Government may requisition Alaskan steamers to divert coastwise shipping to the trans-oceanic routes. This will undoubtedly result in a large portion of the Alaskan trade being transferred to Canada and same would pass through the ports of Vancouver and Prince Rupert.

Canadian Transportation Companies Alert

The situation is one of extreme interest and the possibilities of such a transfer are being watched closely at the western offices of the Canadian transportation companies which would be affected. Preparations are being made to enter on the Alaskan trade on a bigger scale at any moment when the traffic would indicate such a move was warranted. There is no doubt but that a shortage of United States bottoms to handle this traffic would mean calling on the Canadian lines to do everything possible to keep the traffic moving.

In view of this probable outcome, a mass of useful information is being compiled at the offices of the companies concerned regarding the Alaskan business. Seven American and two Canadian shipping companies are at the present time operating in the northern service.

There is no doubt but that the possibilities of the trade are considerable according to data in possession of the transportation companies. Combined imports and exports to and from Alaska represent some hundred million dollars a year in value.

It is, of course, true that Canadian shipping companies would not be in a position to take care of the whole of Alaska's trade but there is little likelihood that all the United States coast steamers now plying in these waters will be requisitioned. Only the larger boats would be suitable for trans-oceanic service.

Canadian Ships Could Be Multiplied

Canadian lines could replace several of the vessels that may be taken over by the United States Government and so divert a portion of the trade to Canada by way of the ports of Vancouver and Prince Rupert. From these ports then

(Continued on page 67.)

A Survey of Western Conditions

Conditions Generally Favorable—$700,000 Crop on One Farm in Alberta—Tractors to Play an Important Part—Mixed Farming Making Strides—Saskatchewan Town in Rich District—52 Bushels Per Acre in Manitoba.

AFTER a trip of some extent through the Prairie Provinces, A. H. Illsey, Associate Editor of HARDWARE AND METAL has returned with splendid impressions of existing conditions. Farmers have done well, with every promise of further success in the greater development which will naturally result on what is at present uncultivated soil. The West's crying need is farmers with real initiative, and more farmers.

Alberta Generally Good

In what is known as Southern Alberta there has been a very satisfactory yield. This is almost altogether a wheat producing area and it has been more conscientiously worked, probably, than some of the Western farms in other parts, owing to the particular adaptability of the district to wheat, which yields very large returns per acre. In a wide survey of the field thus described, covering a 300 mile automobile trip, nothing but a good and enthusiastic opinion and report could be gathered.

$700,000 Crop on One Farm

Much has been written of the success attending the farming ventures and successes of C. S. Noble, of Nobleford, Alberta. This year the outstanding fact is in the immense value of his crop which will be worth, in round figures, the enormous sum of $700,000. This farm has been developed on a very large scale, and what has been demonstrated through the ingenuity and strenuous application of modern principles to farming by C. S. Noble will be most effective, we have no doubt, in stimulating others engaged in similar though possibly smaller enterprises. One of the elements contributing to the large yield here, is that of summer fallowing, which principle is rigidly adhered to.

Tractors Will Be Big Factor in Future

So serious is the problem of feed for horses, that on the Nobleford farm, there will in all probability be in use, another season, many tractors of medium weight and of approved tvpe. In fact the writer was informed that a demonstration was to be made during October, and that, if results were satisfactory, many of these would be ordered and placed in commission at once. The feeding of horses has been the source of much concern on this farm as it entailed the cost of several thousands of dollars monthly.

Central and Northern Alberta

There was some dearth of rain in a few parts of Central Alberta. These were rather local in extent, and here the percentage of excessive heat was also great. As a consequence, there was some effect on the yield, but the quality of wheat was excellent. This, in fact, is characteristic of the western crop of 1917 and is very gratifying. The oat crop here was moderately good.

Northern Alberta has a big crop, and the farmers will realize on same in a big way. A large percentage of this should find its way into trade channels, and the average business man is prepared to meet the demands which will result from a brisk trade. This will be felt largely in Edmonton and the surrounding towns north, east and south.

Mixed Farming Bringing Excellent Returns

One of the best seasons on record is that prevailing in the district eastward from Edmonton and extending in fact right through to Manitoba. In part of this district, mixed farming has been followed with most gratifying results. This has been a gradual development, for at one time the matter of wheat raising occupied every idea that the farmer had along the lines of development of the resources at his disposal.

Success Attending Efforts of Foreign-Born Settlers

A valuable and highly productive district is that served by the towns of Vegreville and Vermilion. These are representative of a large number of other adjoining towns covering a big area. Here, some 75 per cent. of the trade comes from settlers who made their homes here many years ago and are represented by Russians, Galicians, Austrians, Hungarians and others. They have made the best of settlers and have produced much of the wealth possessed in their respective districts. They apply themselves closely to the production of the crop and are rewarded this year with an abundant yield—largely of oats. Wheat has done well, and some barley has been grown, but grain is grown to secure feed principally, as every farmer has concentrated more or less on getting his profit from the sale of beef, cattle and hogs.

Huge Shipments of Cattle

Centred in this district, it is claimed that there is more distribution of freight than at any point between Edmonton and Portage la Prairie. This is, in large measure acounted for by the large weekly shipments of cattle. This has been so carefully and largely developed that at any time a farmer may bring his wagon-load of steers to town or drive in a whole herd, securing the best and highest return per head, evidence of a fair and satisfactory price obtaining on all occasions.

Cattle Herds Six Hundred to One Thousand Five Hundred

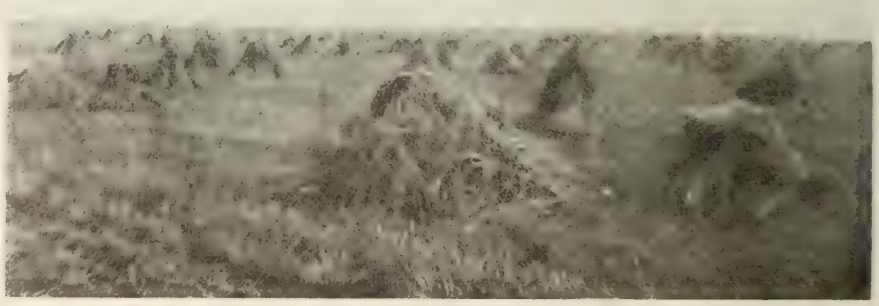
When it is asserted that there are herds of from six hundred to one thousand five hundred in this district, and with these being marketed at top prices, some indication of the adaptability of the country to the pursuit of this industry may be formed. Nearly every farmer has a herd of some size, and the revenue obtainable at any time has served to assure a stability that is built on bed rock.

Cattle in "Park Country" Thrive on Silo Feed

In conversation with a large stockman we were told that the district known as "Park Country" is admirably suited to stock raising. Here the cattle can secure the best of pasture, and with the help of "silo" feed, prepared from oats when in the "dough" stage,—cut dry, and used in early spring and winter there is never any doubt as to the cattle being well-conditioned at almost any time after two and a half years growth. They are usually marketed at from two and a half years to three and a half years, bringing splendid returns.

Sheep Have Done Well

Sheep-raising has received a decided impetus around Vermilion. Here these have increased in number and a very nice margin of profit has accrued to those so



Field of wheat near Dauphin, Man. One load of 88 bushels netted $136.30 to one man. These are the returns which enable the farmer to pay his debts, then buy an automobile.

By no means is all the West an endless prairie, devoid of its beauty spots. This shows one of many pretty scenes to be encountered throughout the West.

engaged. The sheep-raising industry will grow until this will be a very important factor in this district. The wool crop will total about 40,000 pounds this year.

Prosperous Country Reflects Beneficially on Town

The returns from Northern and Central Saskatchewan have been good. There is every reason to say that this has been a banner year here. There are many Doukhobors in this locality who make good, progressive farmers, developing their land well. The prosperity of the farmer is nowhere better reflected than in the town of Kamsack, which is distinguished in a striking manner by the enterprise of its citizens. Clean, well-lighted streets are a distinguishing feature. Oats, barley and wheat are produced in this rich section of the West.

Records of Past Twenty Years Eclipsed

In Northern Manitoba, with Dauphin as a centre, there is abundant evidence of the claim made by the farmers and merchants there, that this district has the best and largest production, agriculturally, in its history of over twenty years. Wheat has been the basis of the farmers' wealth and ideal weather conditions prevailed for the 1917 season.

A few concrete instances may be cited, which will not be amiss. One farm of three hundred and twenty acres sold for $5,000. One hundred and five acres yielded an average of 35 bushels of wheat to the acre, the owner receiving $7,350.00. The remaining 215 acres we may assume, brought in, several thousand dollars additional revenue. Another young man secured a return of $12,000 from a half section. One farmer has successfully garnered 19 crops, one after the other with no rest given and with no fertilizer used. Most of these were wheat crops with barley seeded occasionally to clean the soil. There are many average yields of 40 bushels and some individual yields have reached a total of 52 bushels.

Future Outlook Encouraging

The immediate future for business generally is promising. The basic element for success in the West is the development of its agricultural possibilities. These are being developed extensively and the future depends in a large measure on the successful increase of farm products.

Economy Necessary in Iron and Steel

Situation as to Supplies Remains Serious — Understanding Reached Between Governments of United States and Canada—Results of Visit of F. C. T. O'Hara to Washington.

IT is quite evident that the visit of F. C. T. O'Hara, deputy minister of trade and commerce, to Washington has confirmed reports as to the seriousness in regard to iron and steel supplies. As a result, rigid economy in every scrap of metal is strongly advocated.

Misunderstandings which have existed in respect of procedure in the handling of export license applications and applications for priority assistance have been cleared up and arrangements have been made which, it is hoped, will assist the Canadian manufacturer to secure articles he needs from the United States.

The demand in the United States is abnormal, and there exists a likelihood that a number of Canadian manufacturers will be forced to sacrifice much in the future owing to the fact that the United States will be unable to supply materials required for commercial purposes in Canada. It is further intimated that a scarcity in materials required for the manufacture of articles which might properly be regarded as contributory to the war exists. This can only be met by effecting the strictest economy in the use of metals.

Arrangements have been reached with Washington whereby all articles now requiring priority shall first be covered by a priority application made by the United States shipper. Such priority application must be forwarded to the department of trade and commerce, Ottawa. The department of trade and commerce upon investigation as to the need and urgency of the article in Canada will recommend such priority as it can, based on the scheme laid down by Judge Lovett, chairman of the priorities committee.

It has been arranged to have an officer of the British embassy in Washington detailed to follow up with the export license bureau applications for export licenses which have been endorsed by the department of trade and commerce.

A committee of prominent iron and steel men is now investigating the iron and steel situation in Canada.

POSSIBILITIES OF TRADE WITH ALASKA

(Continued from page 65.)

the Canadian railways would carry the shipments to their destinations.

During the summer months each of the two Canadian lines operates two steamers and in the winter each operates but one boat to Alaska. The summer service of Canadian ships to Alaska therefore consists of four steamers. The Grand Trunk Pacific could not increase their service of two boats, not having any others; but the Canadian Pacific has a sufficiently large fleet to enable it to place as many as half a dozen steamers on this route.

Virtually a Home Market for Canadian Manufacturers

This would seem to offer decided advantages to Canadian manufacturers and no doubt they will watch the situation with great interest. There is a splendid railway service to the coast over the transcontinental lines and a through Canadian freight service should be a marked advantage in securing business from Alaska. Canada's exports are growing rapidly and the possibilities in a field so near at home should not be overlooked.

The shipping companies which now operate a service over this northern route are:

American: the Alaska Steamship Company, the Border Line Transportation Company, the Humboldt Steamship Company, the Independent Steamship Company, the Pacific Alaska Navigation Company, the Pacific Coast Steamship Company, and the Westward Navigation Company. The Canadian lines are the Canadian Pacific and the Grand Trunk Pacific.

EDITORIAL COMMENT

THE DECLINE IN LEAD

THE trade has watched with interest the recent declines in the pig lead market, and the consequent reductions reflected in the prices of manufactured lead products. Lead is one of the products which so far has escaped price-fixing. In this connection the *Engineering and Mining Journal* says that the recent events in lead are another illustration, like the previous case of spelter, of how a market will take care of itself if a little patience is exhibited. In lead, where the Government has kept its hands off in the matter of price-fixing, we have, states the *Journal,* seen consumption reduced by the natural deterrent of high prices and that consumers did not care to pay, whereas in copper the Government is curtailing consumption by strong-arm tactics, telling consumers that they should not have it and, incidentally, wrecking the whole machinery of the market. We imagine that the swiftness in natural curtailment of lead consumption is due to the fact that with respect to a large part of the consumption there is less of a gap between the ultimate consumer and the producer than there is in the case of other metals.

HARDWARE AND AUTO ACCESSORIES

ELSEWHERE in this issue appears an article describing how a Western Canada hardware firm has taken hold of the auto accessory end of the business and effected a great increase. This would indicate what great possibilities there are in this branch of the hardware business, and the hardware men have not been slow in taking up this line.

The auto accessory business is still in its infancy and further developments will be watched with interest. Those merchants who are now catering to the motorist find it a mighty profitable trade and as the growth of this business continues, so will the hardware man who is featuring these goods benefit.

ACTIVITY IN ASSOCIATION

OFFICERS of the Ontario Retail Hardware and Stove Dealers' Association are now actively engaged in preparing a program for the next convention to be held in Hamilton during February, 1918. The program during the coming convention will be along somewhat different lines to that of previous conventions. A number of specialists are to be called in to deliver addresses. There are several new features to be added to the program, and they will appeal strongly to the retail hardware merchant. The officers are endeavoring to prepare a program that will be so cram full of interest to the retailer. that members of the association cannot afford to remain away from the convention.

Following the convention last year, HARDWARE AND METAL hurled several criticisms at the way in which the convention meetings had been conducted. A few members took exception to our remarks, but a large percentage of the members, including practically all officers of the association, supported HARDWARE AND METAL. As an outgrowth of articles published at that time, and the discussion which followed, a large number of excellent suggestions were made as to how future conventions could be made of more practical value to the members. There is no good reason why an association of at least 1,000 members could not be built up in Ontario. In order to do this, however, the trade must be shown that the association is working along practical lines. There is no body of merchants in Canada better able to support a real, live association than the retail hardware merchants. Further details regarding plans for the forthcoming convention will be available in the near future. Present indications are that the convention will be the most practical and interesting of any yet held, and that, when the program is announced, it will meet with the hearty approval of the entire trade.

TAXING THE MOTOR CARS

SOME of the editors of the daily press are advocating loudly that action should be taken similar to that in the United States towards imposing taxes on motor cars to secure additional revenue. In the next sentence they indicate that their use should be prohibited. The inconsistency in such statements is so glaring that it would seem unnecessary to refer to same at all. However, the noise of this taxation cry is reaching such proportions that some of the facts in connection with existing conditions might be brought out.

Why shouldn't motor car owners pay a substantial tax? They do, and a very substantial tax as well. The Federal Government derives a revenue from motor cars that will be approximately ten million dollars this fiscal year. The Provincial Governments derive millions of dollars a year from their motor car taxes. The Federal Government imposes

a tax of 35 per cent. on imported cars, parts and accessories and a war tax of 7½ per cent.—a total of 42½ per cent. The Federal tax on motor cars in the States is 3 per cent. Motor cars in Canada are now carrying a big burden of taxation.

Why say that the motor car is a luxury, placing it in the category with phonographs, pianos, cameras, toys, etc? The motor car to-day ranks with the railroads, street railways, telephones and telegraphs as a utility. It is occasionally used for pleasure—but so are these others and with them it ranks as a necessity. Canada's part in the war would suffer materially were her business and professional men and her commercial and industrial institutions partially or entirely deprived of the use of motor cars.

It is true that the sale of gasoline in Britain for pleasure riding is prohibited but the reason for this restriction in sale for civil purposes is not to effect fiscal economy but gasoline economy.

There is not enough gasoline overseas to meet the civil demand and war demand, due to a shortage of tankage, and until the facilities for shipping a sufficient quantity for all needs are available, most certainly the civil demand overseas must be curtailed.

Why motorists should have to stand more taxation and why any reason exists for Canada's emulating Britain's example in gasoline rationing is not apparent. It is to be hoped the matter ends in talk.

CANADA'S VICTORY LOAN

DURING the week the advertising campaign proper for Canada's Victory Loan has been launched and it is intended that it shall reach everyone in city, town or country, no matter how far from communication they may be.

The message which is being delivered to the people of Canada rings true. The need is great, not only from the standpoint of seeing through this great war work but to maintain our industrial life in all its phases. By subscribing liberally the people in Canada assure full time operations of their manufacturing industries, a market for their farm produce, a continuation of present prosperous conditions.

Subscribing to Canada's Victory Loan involves not only a patriotic duty but carries out the principles which every merchant in the smaller towns, at least, advocates strongly—that of supporting the home town.

Support your own country, lend your money to your own Government. The resources of the country are back of this loan—the security of Canada is a sufficient guarantee of safety and where will you get an equal return on your investment when so secured?

Now is collecting time for merchants throughout the country. By securing returns from outstanding accounts Canada's merchants will be in a better position to subscribe liberally to the Victory Loan. And how about those long-past-due accounts, those which you have almost given up hope of ever receiving? There is a real incentive now, if never before, to solicit payment of these old accounts—invest the proceeds in war bonds. There will be a good return on such an investment, your bonds are all the security any bank will need if money is wanted and you will find that the man who pays such an account will feel better, will be a better friend than when the account grows old and he tries to avoid you.

The Victory Loan means money to the merchant from two important sources—the man whose income is derived from the operations of the various industries and the farmer who must find a market for his produce. Canada in extending credit to the Allies assures for her own producers payment which is so vital to her plans to "carry on." Merchants will do well then to subscribe to the limit of their powers—the returns will come from more than one source.

COMPETITION THAT ENHANCES PRICES

GENERALLY speaking everyone is willing to admit that competition tends to reduce prices. Therefore the neighborhood is rather inclined to rejoice and prophecy better things when they see the growing crowd of small stores growing up mushroom-like in the neighborhood. There is a reasonable basis for the competition idea. But the competition must be legitimate competition. One of the things that the retailer most urgently needs in these days is some protection from the fly-by-night type of merchant who comes into the neighborhood and cuts a wide swath for a time and departs to make room for another of his kind. These nomads of the trade actually boost prices by reducing the volume of business that is done by the individual store. Too much competition is just as harmful as too little, and, as surely as average competition will tend to keep prices at a true level, just as surely will too much competition force prices beyond their rightful limit.

EDITORIAL BRIEFS

"THE consumer who pays his bill every sixty days and insists on delivery four or five times a day, is going to feel and probably complain of the high cost of living. He has, of course, put the market up on himself."

Fellow merchants, let us take our hats off to J. Ogden Armour, who voiced the words quoted above, and say a heartfelt Amen!

* * *

"THE Cabinet has decided to extend the increased barrelage of 33 1-3 per cent. of beer permitted during the summer months to the ensuing quarter. The extension has been granted on a recommendation made by Lord Rhondda after most careful inquiries as to whether, having regard to the food situation, grain could be released for the purpose."—*The Times.*

One of those little items that keep us from being too enthusiastic about eating brown bread when we prefer white, in order that the wheat may be saved for our allies.

Awarded first prize for places over 5,000 population in HARDWARE AND METAL'S *Annual Christmas Window Display Contest last year. Arranged by H. W. Parr, for the Fawcett Hardware Co., Ltd, Saskatoon, Sask.*

Looking Ahead to the Christmas Window Contest

HARDWARE AND METAL'S *annual Christmas window display contest will be conducted as usual this year. The growing interest evinced by Canadian retail hardwaremen in this contest is evidenced in a wider and more representative response each year.*

Two contests will be conducted in accordance with past custom—one for stores in places under 5,000 population; the other for places of 5,000 and over. No restrictions are set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

ARE YOU GOING TO ENTER?

EIGHT PRIZES WILL BE OFFERED AS FOLLOWS:

Places under 5,000.		Places of 5,000 and Over.	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town trimmer as to those in the larger towns and cities.

The contest closes Tuesday, January 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

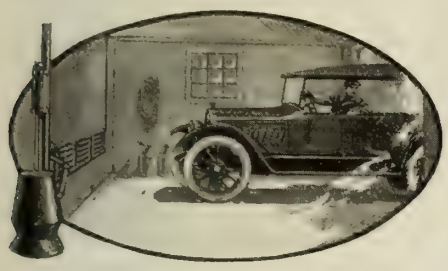
All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas Window Contest."*

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

GARAGE HEATING SYSTEM

W. A. Schleit Mfg. Co., Inc., Syracuse, New York, N.Y., are marketing the Wasco garage heating system which is claimed to eliminate engine troubles in winter time due to freezing in the garage. The Wasco system is a coal-burning, self-

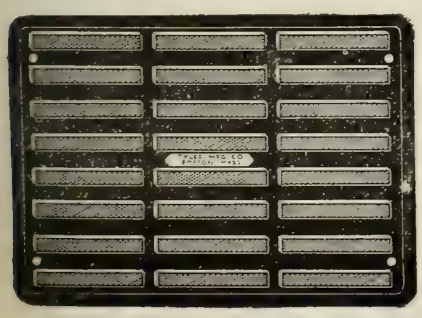


Wasco heating system for garages.

regulating, hot-water system that is automatically regulated. The water in the system carries the heat from the heater through the radiators all along the rear of the garage. The system is claimed to burn only 5 cents worth of coal per day owing to its automatic regulation and to require very little attention. The stove is claimed to be safe because the fire in the heater is surrounded by water in the jacket and thereby eliminates any danger from the heater becoming red hot. The Wasco heating system is claimed to eliminate danger of frozen radiators and batteries, cracked cylinders, straining of a cold engine and starting device, cracking and dulling of varnish and to prevent gumming of oil. The system is claimed to save many times its cost by cutting down repair bills to automobiles apart from the comfort and convenience given by the heating equipment.

AUTO STEP PLATE AND BRAZING TORCH

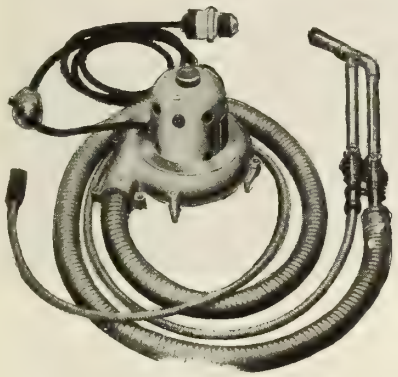
Tyler Manufacturing Company, 64 Pearl St., Boston, Mass., is marketing two new articles, i.e., the Tyler Safety Step Plate for automobiles, and the Bantam electric-gas brazing torch for shop



Tyler safety step plate.

work. The safety step plate presents a surface made up of small pyramids of rubber which are claimed to grip the sole of the shoe whether wet or dry. The surface is also claimed to be most efficient in removing mud, etc., from the shoes. The plates are attached by means of screws, are made in the following styles; polished aluminum plate with red rubber inserts; steel frame black enameled with gray rubber; steel stiffening plate covered entirely with rubber; heel plate made half the size of the step plate. The step plates are claimed to provide a sure footing on the running board of the automobile and to keep the inside of the car clean.

The Bantam electric-gas brazing torch is claimed to be designed to meet the very general need for an ever ready torch that may be used anywhere about the shop. It may be attached to any gas outlet of sufficient size or to an electric light socket. It is used for annealing and hardening small tools, brazing

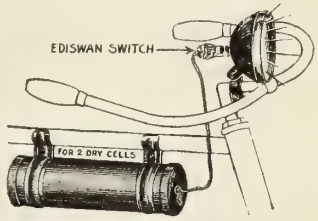


Electric-gas braznig torch.

small pieces, heating soldering irons, heating melting pots, soldering, etc. The torch is equipped with a universal motor and can be adapted to use with any special kind of electrical current. The outfit consists of 1 motor blower with 5 ft. cord, switch and attachment plug, 5 ft. air hose, 5 ft. gas hose, 1 brazing blow pipe.

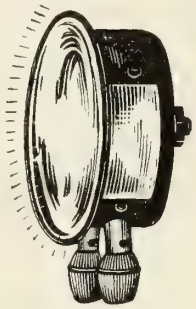
SMITH BICYCLE AND TAIL LIGHTS

F. A. Smith Manufacturing Co., Inc., 187 North Water Street, Rochester, N.Y., are introducing two new electric features —No. 29 bicycle lamp and No. 261 tail light. The bicycle lamp is claimed to be a very attractive lamp with a face diameter of 3¾ in. fitted with new Ed. switch and D. C. bulb. The lamp connects to the battery in a simple manner and is said to give no trouble to dealer or user. The lamp is finished ordinarily in black, baked enamel but is also furnished in nickel. A two cell outfit is provided for attachment to the bicycle bar. The Ford tail light is claimed to have



Smith Bicycle Lamp

been designed to eliminate the unreliable oil tail light. When the car is running it operates from the magneto the same



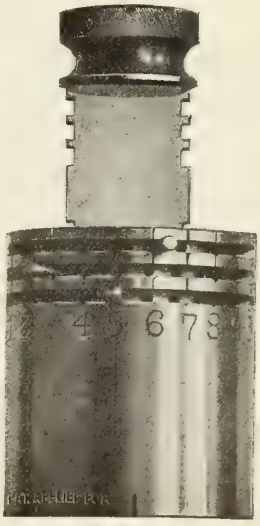
Ford Tail Light.

as the headlights, and when the car is standing it operates from one dry cell. This light is equipped with two bulbs, and is operated from the same switch as the headlights.

AUTO COMBINATION LOCK

Moss Auto Combination Lock Company, 20 W. Jackson Blvd., Chicago, Ill., is marketing a new auto lock which is

(Continued on page 76.)



Moss combination lock.

EVENTS IN THE TRADE

BUSINESS CHANGES

Toronto.—J. D. Naylor, hardware, has sold out.

Toronto, Ont.—Gordon H. Wall has disposed of his hardware business on Roncesvalles Ave. to Monarch Hardware Co. and has purchased The Dresden Hardware Co., Dresden, Ont. Mr. Wall was in business in Toronto for 5 years.

TRADE NOTES

Kandahar, Sask.—F. J. Sanders, hardware and implements, is opening branch at Dafoe, Sask.

Montreal.—Harris Sales Company, hardware, has been registered.

Montreal.—Mount Royal Hardware Company has sold assets.

Chatham, Ont.—Proprietor of Blonde Hardware is retiring from business.

Kingston, Ont.—W. A. Mitchell, hardware, has sold out to Stevenson & Hunter.

Wetaskiwin, Alta.—Baron & Co. opened their new store on Nov. 1 with a complete line of shelf and heavy hardware, in addition to which furniture will be carried.

FIRE LOSS

Hastings, Ont.—Hastings Tanning Co. have suffered fire loss.

OBITUARY

Toronto.—J. Brown, for many years western representative of James Morrison Brass Company, and a former president of the concern, died recently in Toronto in his 89th year. He was for over forty years connected with the Morrison business.

INDUSTRIAL NOTES

Toronto, Ont.—Hall Carburetor Company has been sold to Heisey Carburetor Company.

Toronto.—Transparent Rubber Goods Company has been dissolved.

Brantford.—Dominion Steel Products Company will extend their plant in order to cope with large orders for heavy machinery for merchant ships being constructed in the United States.

PERSONAL

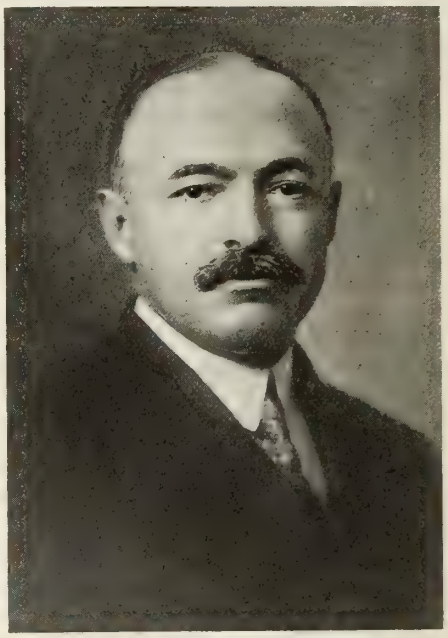
M. McClure, general merchant of Port Sydney, Ont., was a business visitor in Toronto during the week.

J. M. Winter, King, Ont., general merchant, was in Toronto during the week and made some business calls.

C. B. Reece, Jordan, Ont., general merchant, spent a day in Toronto during the week.

APPOINTED WESTERN REPRESENTATIVES

P. A. C. McIntyre & Co., Winnipeg, have been appointed sales agents for Western Canada for The L. Martin Co., New York, manufacturers of lamp black.



GEORGE C. MORTON

Treasurer and General Manager of the Carpenter-Morton Co., Boston, Mass, was elected president of the National Paint, Oil and Varnish Association at their recent convention in Chicago.

FRANK STOCKDALE LECTURES

Frank Stockdale, retail merchandising expert, is now lecturing in Toronto. Extracts from his talk, starting next week, will be run in HARDWARE AND METAL. Mr. Stockdale's experience has been gained chiefly in the United States but conditions there will parallel those in Canada to a great extent, so talks should prove instructive.

"MADE-IN-CANADA" EXHIBITION

As a step toward preparing Canada for the trade rivalry that is expected to follow the world war, a mammoth "made-in-Canada" exhibition was opened in the Montreal arena last week to be continued for a week. The exhibition consisted of a comprehensive showing of Canadian manufactures of all descriptions and was given under the auspices of the provincial governments and numerous commercial organizations.

MARITIME BRANCH OF C. M. A. CONVENTION

Upwards of forty manufacturers from the Maritime Provinces gathered in Sydney, N.S., recently to attend the fall convention of the Maritime branch of the Canadian Manufacturers' Association. The sessions were opened to all manufacturers whether members of the association or not, and the convention lasted two days. S. R. Parsons, president of the association, with other prominent manufacturers and public men, addressed the convention. D. H. MacDougall of the Dominion Iron and Steel Corporation, with Deputy Mayor McIntyre, delivered the address of welcome, and R. J. Young, general manager Export Association of Canada, discussed export trade before the convention.

REFRIGERATOR PLANT CHANGES HANDS

The plant, machinery, stock and patents of the Barnet Manufacturing Co., Ltd., of Renfrew, Ont., manufacturers of the Barnet refrigerator, have been purchased by Thos. A. Low and F. D. Vickers of Renfrew. Operations are being commenced under the name of the Renfrew Refrigerator Co., Ltd.

REMOVAL OF IMPLEMENT AND AUTO DUTIES

The Manitoba Food Control Committee has recommended to the Government the removal of customs duties on agricultural implements, farm machinery, and cheap automobiles. The resolution was based on the serious food shortage throughout the world and the fact that the government has urged the western farmer to produce the largest possible crop of wheat in 1918. It is believed that the removal of duties on these articles which retail at $1,000 or less will greatly aid in increasing production.

FT. WILLIAM RETAILERS' ANNUAL MEETING

The following officers were elected at the recent annual meeting of the Fort William Retail Merchants' Association: President, E. E. Nugent; 1st Vice-President, E. R. Gavin; 2nd Vice-President, J. B. Evans; Sec.-Treasurer, C. Wilson; Auditor, R. L. Cook. The Executive Committee consists of the following: C. H. Jackson, R. L. Cook, R. B. Maybee, A. H. Griffiths, J. G. Macdonald, R. E.

Walker; Past Presidents, E. E. Nugent, E. R. Gavin and J. B. Evans.

C. H. Jackson gave an interesting talk on the history of retail merchandizing, followed by an interesting talk on the honor, uprightness, and integrity of the retail merchant by G. H. Sills, who emphasized the obligations thrust upon the retailer. Mr. Sills contended that the retailer owed it to the community to see that his obligations were fulfilled and not abused. The annual report of the outgoing president, Mr. R. E. Walker, was read by the secretary, owing to Mr. Walker's absence.

ST. JOHN, N.B., NEWS

The friendly spirit which marks the staffs of the hardware establishments in St. John was again illustrated this week when the employees of W. H. Thorne & Co., Ltd., and T. McAvity & Sons, Limited, got together for an evening's entertainment. The Y.M.C.A. building was placed at their disposal for the occasion and the evening was spent in quite a hilarious fashion. The bowling alleys and swimming pools were the scenes of friendly contests between the rival establishments, and in the gymnasium another series of athletic contests occurred. Towards the close of the evening refreshments were served by the lady members of the staffs.

The shipbuilding industry, which provides an important market for hardware supplies, is rapidly developing in the Maritime Provinces. Two more shipbuilding companies have been organized in Digby county, N.S., the Acadian Shipbuilding Company, Ltd., at Saulnierville and the Comeau Shipbuilding Co., Ltd., at Comeau. At Meteghan River, N.S., a New York concern has taken up a property to establish shipyards also. They have erected two large mills and will start operations so soon as the machinery arrives. At Nordin, Northumberland county, N.B., The International Shipbuilding Corporation has taken over the Rosebank Lumber Company's mill and is adapting it as an accessory to their new shipyards in which the first keel will be laid before winter sets in.

A big vein of copper has been discovered on the St. John River, about two and a half miles above Woodstock, N.B., by McClement Brothers, who have been prospecting the district. Developments on a large scale are expected.

Hopes are held out that the plumbers' strike, which has been in progress in St. John since May 1, may be settled soon.

Hon. F. B. Carvell, the new Minister of Public Works, announced in St. John this week that the new million dollar breakwater, which was to extend to Partridge Island at the mouth of the harbor and for which tenders will have been called, will not be constructed "so long as the country's money is needed for shells," adding that "munitions must come first."

The passage of the seasons is marked clearly by the display windows of T. McAvity & Sons, Ltd. This week the opening of the lumbering season is greeted with an attractive window in which a logging camp scene is arranged. The eye-catching display serves to attract attention to a supplementary showing of a very complete line of tools and equipment used by the lumbermen.

The Commercial Travellers' Association, the Retail Merchants' Association and various Boards of Trade are preparing a vigorous opposition to the application of the New Brunswick Telephone Company for permission to start their night rates at eleven instead of ten o'clock, p.m., which is to be heard before the Utilities Commission.

INCORPORATIONS

Montreal.—Ucan Specialties Company of Canada has been incorporated with a capital of $100,000 to carry on business as importers and exporters of hardware, leather, steel, brass and iron, etc.

Quebec.—The Warwick Machine Company has been incorporated with a capital of $100,000 to manufacture and deal in roofing paper, automobiles, washing machines, wringers, stoves, scales, etc. J. E. Julien and S. Fleury, merchants of Quebec, are among the incorporators.

Montreal.—Atlas Export Co. has been incorporated with a capital of $100,000 to manufacture, buy and sell goods and to collect and publish information affecting trade and commerce.

Cobalt.—Kerr Lake Mines has been incorporated with a capital of three million dollars to develop copper, iron, coal, silver, cobalt and gold mines and to treat ores.

Toronto.—Consolidated Metals Corporation has been incorporated with a capital of three million dollars to develop mineral lands and to treat metals.

Hamilton.—Battle Natural Gas Company has been incorporated with a capital of $100,000 to manufacture and deal in peat, gas, gasoline, petroleum and other oils.

Montreal.—Gold Medal Broom & Brush Company has been incorporated with a capital of $150,000 to manufacture brooms, brushes, etc. P. Demers, Wm. H. Langelier of Montreal are among the incorporators.

STOP FAKE ADVERTISING

Ottawa Retail Merchants To Meet Publishers—Dealers Placed in Bad Light

At a recent meeting of the General Executive Board of the Retail Merchants' Association held in Ottawa, plans were made for the holding of a general meeting of the association in the Russell Hotel on November 12 at which prominent speakers will be heard. A committee was appointed to approach newspaper publishers with a view to arriving at some means of stopping false advertising. It was pointed that newspapers are not in as favorable a position as retail merchants to establish what is truthful advertising and what is not. Preparations are also under way for the holding some time in December of a meeting in the Chateau Laurier, Ottawa, to which all commercial travellers in the Eastern District will be invited. The association has appointed a committee to commence a publicity campaign and also a committee to bring about a closer co-operation between the newspapers and retail merchants.

EMPLOYEES DOING THEIR BIT

More than one hundred employees of The Stanley Works have left their positions to fight for Uncle Sam, in some capacity. Some have entered the Government Munition Inspection Service.

Under the auspices of The Stanley Club a weekly letter on office and factory happenings is being sent to each former employee now in the Government Service. Recently an entertainment was given for a fund to buy tobacco for Stanley Works' soldiers.

An average of one hundred girls employed in the office do Red Cross work one evening a week at the office, the company supplying them with supper.

A fund has just been raised among the employees to purchase a complete ambulance equipment and present it to the Government, and one of the men now working in the Cold Rolled Steel Mill has volunteered to drive it.

For both the first and second Liberty Loans the company has sold bonds to its employees for weekly payments extending over a year. On this basis over $100,000 worth of bonds were subscribed to for each loan, or an average of about $40 worth of bonds for each Stanley Works' employee.

HARDWARE LETTER BOX

Bicycle Pumps

Soclean Ltd., Toronto.—We would be much obliged if you could supply us with the name of a Canadian firm manufacturing bicycle pumps.

Tallman Brass & Nickel Co., Hamilton, Ont.—Ed.

Calcium Chloride

Fraser Hardware Co., Galt, Ont.—Could you inform us where calcium chloride can be obtained?

Lyman Bros. Co., Ltd., 71 Front St. E., Toronto.—Ed.

Sunbeam Oak No. 117

E. Arcand, Lafleche, Sask.—Please let me know where the Sunbeam Oak No. 117 is made.

McClary Mfg. Co., 177 King St. W., Toronto.—Ed.

Blackstone Washing Machines

The Plaunt Hardware Co., Ottawa.—We would be obliged if you could supply us with the name of the manufacturer of the Blackstone Washing Machine.

Blackstone Mfg. Co., Jamestown, N.Y. —Ed.

Stanford Steel Range

Fleurie Bros., Eganville, Ont.—Could you tell us where the Stanford Steel Range is made, or the address of the Steel Range Co., Ltd., Canada?

Can any of our readers supply this information?—Ed.

THE CLERKS DEPARTMENT

A BUSINESS MAN RUNNING A NATIONAL WAR MACHINE

A Sketch of Baker, the American Secretary of War—A Quiet, Hard-working, Clear-thinking Man of Executive Ability.

ONE of the biggest jobs in the United States at the present time is that of the Secretary of War. Newton D. Baker, ex-mayor of Cleveland, who is holding it, is an unobtrusive little man who works hard and long, and has failed so far to win public approval or attention. He is a thinker, a doer, a keen executive, but absolutely without magnetism or a flair for publicity. Consequently he has not been elevated to the position of a national hero as he might easily have been, had he shown any tendency to rattle the sabre or behave as a war lord, even of the democratic persuasion, should behave. However, those who know something of the inside story of war developments at Washington are beginning to see in Baker a real force. Edward G. Lowry discusses him in Collier's in a very favorable light, terming him "the emerging Mr. Baker." This Lowry estimate is made up largely of a review of the Secretary's opinions, but the following bits of information are supplied.

"What are you interested in—have you any special interests?"

"My job."

"But before you had this job?"

"My job in Cleveland. I have never been interested in anything but the work I was doing. I have always had too much to do. I never had the discouragement of looking for work nor any leisure between jobs. When I began to practise law in Cleveland my senior partner became ill and I had unexpectedly a lot of work thrown on my desk. Then I became associated with Tom Johnson. Tom was a dynamo. He could find more work for a subordinate to do than any three men could do. He kept me busy. When I became mayor thousands of people came to the mayor's office as to a father. They told me their troubles, and I tried to help them. I married them and buried them and visited the sick and the poor. After the day's work in the office was done I would go into one of the foreign quarters, or to some meeting, or to see a sick family, or a man or a woman out of work and in distress."

Working day and night, as Mr. Baker does, is no new thing to him. He has always done it. It doesn't tire him or wear on him. He has never been sick a day in his life. He has never been kept indoors by illness. He has a perfect digestion. That keeps him from fretting, from worrying, from losing his temper and his poise, and enables him to keep steadily working without haste, waste or friction. He never takes any exercise, but he seems to get on all right without any. He doesn't advise anybody to follow his example, however. It just happens so that he doesn't need exercise to keep well.

"What do you read?"

"I try to read everything. I really do think I have read as much and as widely as any man of my age. I don't think my reading has been as wide and as varied as Colonel Roosevelt's, but I don't know anyone else in my acquaintance who has read more. When I was a student at Johns Hopkins I lived in a house with a number of men who were studying widely different subjects. I became interested in their subjects, and that led me to read about them and to broaden my reading. It is a habit I have kept up."

A quiet, modest, unassuming, simple, selfless, sober-sided, serious-minded, earnest man who is doing his job just as well as he knows how. He is a competent, intelligent man. His mind has an edge. His brain is well furnished. The mental engine is there, and it functions steadily and frictionlessly. His chief asset as a public servant, I venture to allege, is his moral character. This is a more valuable and useful possession, a more trustworthy attribute than brilliancy.

He has not disclosed a powerful, penetrating intellect of "flashing impulses," but he has a sound, good mind. He contends daily in the War Department with an almost impossible, impractical organization. The power and responsibility in that archaic scheme of things are not intelligently placed. But Mr. Baker runs his job; it does not run him. Too infrequently can that be said of Cabinet officers.

It is not possible to erect Mr. Baker into a great heroic figure forging thunderbolts of war and launching them with majestic mien against a cowering and hated enemy. That is not his style. Neither is he the negligible quantity and colorless apparition some persons suppose to be rattling aimlessly and helplessly about in the Secretary of War's chair. He is not the greatest man in the world; but neither is anyone else in Washington—in the Cabinet.

He is a confessed pacifist and has no lust for fighting. As I make him out he is the same type of pacifist as Lloyd George and Albert Thomas, French Minister of Munitions, were before the war. Yet they are "doing their bit." Mr. Baker not only has no lust for fighting, but he does not believe that a man inflamed with the lust to kill makes a good soldier. His outlook toward the war seems oddly alike to me to that of the British private soldiers I have talked with in France. They have no illusions about the bitter business they are engaged in. Warfare has for them no glamour. I think I can put their thought in two words: "Never again." They know what the German menace is. They have seen it. They know the war must be fought through at whatever cost if the world is to be free. But the men back of the bases loading Maconochie rations on trucks or counting picks and shovels and boots as well as the men in the front-line firing trench are doing their work in the same spirit—a spirit of dogged and splendid resolution—but they make no pretence that they enjoy it and that it is glorious. I can count on my fingers the soldiers of France and Britain I have met on the western front who look upon the war as a great adventure. The gay French are not fighting gayly. They are fighting terribly and for their lives. They are fighting a monstrous plague of government that will suffocate the world if it is not destroyed. Baker says we must see the business through; that we must prepare on a great scale and steel our hearts and minds for years of endurance and struggle if the enemy shall hold out that long. At least, he is not like so many of the odd, superficial, strangely detached minds in authority in Washington who see in this colossal derangement of society only a great brawl. He has glimpsed the meaning of what is going on in the world.

He has a simple, clean mind and heart. He is doing the best he knows how. He has not made any grave mistakes. He does not underestimate his or our task. I do not wish to appear in print as a champion of the Secretary of War, but simply to tell about him. This is no time to carp and rail at him. I don't know whether he has the stuff in him, the fibre and substance of mind and spirit to continue to manage coolly and intelligently the important affairs intrusted to him should things go badly wrong. He is making good now. He is master of the forces he is directing. If and when the time should come that he is no longer master; if his purpose should become infirm and his vision clouded, he would have to go. I don't mean dismissed by the President, but swept away by the irresistible currents and powers and influences that underlie and sway this great world upheaval. Dozens of "strong men" in Europe have gone that way since August, 1914. It would be easy to call the roll of soldiers and ministers who have gone down.

That time is not in sight for Mr. Baker. He is not and has not been oppressed or diminished by the men about him or by circumstances. He has the confidence and the willing subordination of the men who know him and work with and for him. He is more intelligent, has a better mind, than any of them I know. Some of the soldiers do not always understand him and the workings of his mind, but I do not think any of them who is of any consequence distrust him.

Indeed, I venture to say that Mr. Baker

has grown in stature since we went to war, in the sight of those who have come in contact with him and who have been most familiar with his actions and decisions. There is an appealing quality about him, possibly his simplicity and selflessness, that wins the respect and affection of those closest about him. He seems himself to have a limitless respect and consideration for fellow human beings merely as such; he takes them seriously. The other night a new stenographer, a boy, was sent to the War Department and assigned to the Secretary's office. He came early after dinner and took his place in the outside office where the typists have their machines. The offices were apparently empty. Presently a bell rang, and the lad went into the inner office to see what was wanted. The man at the desk got up and crossed the room with outstretched hand. "Are you the new stenographer? My name is Baker. What's yours?"

You may think that the simple human friendly thing to do, but you don't know Washington if you think many others in high place would have done it.

"A Human Little Cuss."

Mr. Baker told the Military Committee of the House not long ago, at a secret hearing, his political philosophy:

"For twenty years I have followed a political philosophy which I think is vindicated by its results. I have done what I thought was right, explained it to those to whom I was accountable, and, so far as I can recall, they have always both welcomed the explanation and approved the action."

Mr. Wilson is reported to have said: "What I like about Baker is that he doesn't tell me a thing twice. When he has told me something he gives me credit for enough intelligence to understand him without going over the whole thing again."

A reporter who covers the War Department told me: "Baker is a human little cuss. I like him. I think he's got the goods."

So do I.

In another year we shall all know, for events will have appraised Newton Diehl Baker, aged forty-five years, at his true value.

"Victory Convention" Dinner

Concluding Social Event of Martin-Senour Co.'s Twelfth Annual General Sales Convention— Salesmen Honored.

THE social event of the Victory Convention of the Martin-Senour Co., Ltd., Montreal, was the annual family dinner, held in the premises of the Canada Club on Wednesday, October 24.

The event was presided over by Mr. A. T. Black, general manager of the firm. Music was furnished by a Hawaiian orchestra.

Presentation of the various prizes for good work by the staff was carried out by Mr. Black, assisted by Mr. Houghton and Mr. Daly. The winners in a special three months' campaign and competition were made the recipients of headgear ingeniously contrived most appropriately from cans of the Martin-Senour products. Those so honored were: H. M. Borland, C. D. Cookson, M. A. Daly, and J. H. Conover. All-round honors were won by J. E. Naud, who was awarded a special compliment and a hat consisting of cans of each and all of the specialties selected for the contest.

Special compliment was given C. F. Kendall, the newly-appointed sales manager. Prizes were won also by J. E. Naud and E. J. Cookson, and a special prize for efficiency in sending in clear errorless orders and reports was won by C. D. Cookson.

The event of the evening in the matter of prize distribution was the awarding of the Z. E. Martin trophy (silver cup) to the winner for the year, T. L. Sheppard, who represents the firm in Nova Scotia and the Maritime district. The runner-up in the contest for the trophy was J. Brault, to whom was awarded a consolation prize.

A surprise toast was sprung on the general manager, proposed by Mr. Kendall, and the compliment was very heartily accorded Mr. Black by the whole staff present. In his reply, Mr. Black expressed his desire to give each and all a square deal and to keep warm and alive the kindly relationships existing between himself and all the staff.

J. E. Naud, who for the first time in many years was compelled to make apologies for not being present owing to illness, was made the recipient of the flowers from the banquet tables—a magnificent bouquet of chrysanthemums.

Because of the fact that the nation is at war and the spirit of economy is so honored in the land, the banquet was, by suggestion of Mr. Black, kept extremely moderate. At its close, Mr. Black announced that the difference between the cost of former lavish dinners and the simpler style of the evening's repast would be handed over to a patriotic or charitable fund decided on by the staff.

Group photograph of members of the Martin-Senour Co. staff present at the Twelfth Annual Sales Convention, held at Montreal, October 22 to 26, 1917, and known as the "Victory Convention."

A copy of this photo was laid with the cover for each guest at the Annual Family Dinner, also a Martin-Senour "Hand Behind the Brush" Watch Fob.

Hardware in the Balkans

Seeing Salonica Through the Eyes of a Hardware Man—Stores Really Stalls, Stocks Limited—Coppersmiths Still Ply Their Trade—The Farmer, His Plow, Reaping Hook and Axe—Carpenters' Antiquated Methods.

Editor's Note.—Many of our readers will no doubt remember Frank D. C. Richards, who at one time conducted a hardware business in Toronto. Mr. Richards is now a lieutenant in the British Army, stationed around Salonica.

In writing to HARDWARE AND METAL, he has enclosed this most interesting article, "Hardware in the Balkans," which we are publishing intact. It will be a surprise to many to know how limited the operations of the hardwareman are in that country—to learn that the old coppersmiths still ply their trade—to find out that a farmer's outfit is usually limited to a plough, reaping hook, and an axe.

Mr. Richards signs himself "Still a Hardwareman" and readers of HARDWARE AND METAL will be very glad to have an opportunity of seeing his collection of curios on his return from the scene of war.

IF you were to walk through the ancient city of Salonica in hopes of finding a real, live hardwareman and store, you would be greatly disappointed. The few Russian Jews who did handle hardware are now, I expect, out of business owing to the great fire which wiped out all the business centre of this city.

Stores Really Stalls, Stocks Limited

On my arrival in this country a year ago I had the pleasure of spending a week in Salonica before going up the line to join my regiment. I used the time to advantage and went out daily to see the sights.

In a dirty little street I found the leading hardware store. There sat an old man in the road with most of his wares distributed around him. The stores have no windows and doors as ours have. They are more like stalls in a market place; no fine show cases are seen to display goods. Small articles are placed in boxes on shelves and a sample of each is tied on the outside of the box. The stocks carried are not large and certainly not half as varied as ours are. The principal item is enamelware of a very cheap make, which, before the war, was imported from Austria. Beads, buttons and such small articles is another item they carry; heavy stocks of nails, screws, locks, lamps, axes, reaping hooks, and a bit of German cutlery make up the total stock. As far as I could see and learn this part of the world would not be of much use to the British hardware manufacturer for business. Almost all the houses are very flimsy indeed and very sparingly furnished. I have sold hardware in several parts of the world, and I certainly would not care to come out here in hopes of getting business. It's not to be had.

Coppersmiths Still Ply Their Trade

In another street in the Turkish quarters, I found several coppersmiths. These people are very interesting to watch at

FRANK D. C. RICHARDS

Serving as a lieutenant with the British Army in Salonica.

their work. They sit in the street and beat away at a sheet of copper all day long. Before enamelware was imported all the household and cooking utensils that were used were made of copper. This is the class of work I found these smiths on. The brazing of jugs, boiling pans, and vases is perfect, I have never seen better. There is still a quantity of these articles in use, but they are found mostly in the distant villages. Where I am at present stationed (near the Struma River) I have seen them in all the villages and have been lucky in picking up quite a number of articles. In several of the deserted villages I had some real good finds. Some day I hope to be able to show my collection to the trade. I suppose the reason the villagers still continue to use copper articles is because there are no stores near to purchase new articles from. It takes three days to get from here to Salonica and there are no roads such as we know them. The old trade routes are still in use, which are nothing more than mule tracks. I know several of them and have ridden on them. I have been on these routes for hours at a time and never passed a single being.

The Farmer, His Plow, Reaping Hook and Axe

Now I will try to describe the farmer and his tools, of which I have only seen three, the plough, reaping hook, and axe. The plough is a wooden machine, very primitive indeed, and I believe it is the same pattern as was used in our Lord's time. It is drawn by two oxen, the man walks behind and regulates the depth of the furrow by a handle or lever. Attached to the other end of the lever is the plough share. It is said and I believe truly that the plough is the same pattern as has been used for thousands of years. As a boy I remember seeing a picture in our old family Bible of a man ploughing a field, the ploughs and dress of the people here are an exact copy of that picture. The reaping hook is just an ordinary one almost identical with ours. The corn, etc., is all cut and threshed by hand, most of the work being done by the womenfolk.

Carpenter's Antiquated Methods

Now I will try to describe the carpenter and the chief tools he uses. His chief tools are a hammer-headed adze, a saw, something like a tenon, but without a back, and a plane of doubtful origin. I must say some very clever and clean work is done with the adze. But you must bear in mind that the Greek carpenter does not make joints like ours do, most being mitres. They are awfully slow in their work and take twice as long as we would to do a job. The saw is not used as we use ours. All the cutting is done on the upward or back stoke. From what I have seen of this country and its customs,—it is not of much use to the British hardware manufacturer and unless it improves wonderfully it never will be.

U. S. FUEL OIL FOR BRITAIN

An ample supply of fuel oil for the British navy was assured at a conference between British Government representatives, Standard Oil officials and members of the U. S. Shipping Board at Washington recently. The Shipping Board will rush the construction of 58 oil tankers recently commandeered in shipbuilding yards, and is considering building at least forty more. The problem, it was declared, is entirely one of tonnage, as there is an abundance of oil on this side of the Atlantic.

NEW HARDWARE GOODS

(Continued from page 71.)

claimed to be the result of years of careful experimenting. The new lock works on a combination and therefore eliminates the necessity of using a key. The lock is claimed to be theft-proof, prevents losing a key, admits of changing combination when desired, has no springs to get out of order, quickly locked and unlocked, can be locked when operating car, ornamental as well as useful, reduces insurance, the last word in auto locks, absolutely guaranteed. By making an individual combination the lock cannot be opened by any except the owner or one who has been given the combination by the owner.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

CHANGES in hardware lines during the week have been numerous and important enough to make the movements of more than passing interest. A notable feature of market conditions has been the declining tendency in some commodities. Lead products, such as white lead in oil and lead pipe and lead waste pipe, have registered declines, following the continued weakness in pig lead. Black sheets and galvanized sheets have also moved in a downward direction. Soldering coppers are quoted lower and tarred building paper has also declined. These changes are sufficient in scope to indicate that there has been a noticeable trend in the downward direction during the week. On the other hand advances have been recorded in cotton products, such as twine, cotton rope, sashcord and clothes lines. Rivets and burrs, toilet paper, pine tar, dog chains, scythe stones, brooms are other lines that have been moved to higher levels. The period is one of rapid transition. Retail hardware merchants are governing themselves accordingly and are buying only for their immediate requirements. However, the volume of business transacted by wholesale houses is good. There is a good demand for fall goods. A more pronounced demand has been noted for heating equipment since the advent of the recent cool weather.

MONTREAL MARKETS

MONTREAL, Oct. 31.—While there are not as many changes this week in prices, there seems to be an air of uncertainty as to the immediate future of many lines, and much hinges on the extent of government interference with the metal market in general. Among the changes reported is that of a lower discount on glass, this being now fixed at 20 per cent. and 15 per cent. Lead waste and lead pipe are down in sympathy with recent reduction of pig lead, which is weaker in London and New York. Cotton rope has again soared and is now 55 cents for the 3/16 size and 54 cents for ¼ in. and up. Sash cord is also higher. Pumps tend to go higher. Hungarian nails are up $2 per hundred pounds. Cotton clothes lines are higher by about 10 per cent.

Heavy Goods And Shelf Lines Unchanged

Montreal.

SHELF GOODS AND HEAVIES.—There are few changes but there is a stiffening tendency in some directions. General business is just fair from city sources while from the country points this is very good. Pumps are very firm with an upward tendency. No. 2 tarred sheathing is quoted at 70 cents per roll, representing a decline. The prices on shovels and spades have been withdrawn and there will be an announcement soon as to new quotations.

Boiler Tubes Not To Be Exported

Montreal.

IRON PIPE.—There is no relief in sight in the matter of iron pipe, and the prices, while not higher, remain firm at last week's quotations. Export of boiler tubes from the United States is not permitted except under license for each particular case. By reading between the lines of reported conditions as affecting the metal markets generally, it will be seen that there is no reduction of prices likely.

Wire And Nails In Steady Market

Montreal.

NAILS AND WIRE.—Some sorting business is being done in nails at the prevailing prices of last week. This market may be still watched with interest although there is no change for the week and prices are firm. Wire nails are quoted at $5.50 base per keg and cut nails for $5.75. Smooth steel wire is selling at $6.50 base per hundred pounds.

Firmness Is Feature In Iron And Steel

Montreal.

IRON AND STEEL.—There is a very firm tone to the iron and steel market this week. While no price changes are to be recorded here, it will be observed that the prices on spades, shovels, etc., have been withdrawn. With so many factors to consider such as government control and the seriousness of the transportation problem, it will be of still greater concern to those directly affected to watch developments closely for the next week or two. Market prices follow:

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 18-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 19-0 19

Sheet Metals Getting Scarcer

Montreal.

SHEETS AND PLATES.—The supply of sheets is growing very small in all quarters and it is hard to discern the immediate future situation which will develop. There is a stronger tone in tin which tell tend to affect the price on sheets in the near future. This, in pig, is quoted higher both in London and New York. One firm names a reduction of $1 per hundred pounds all through on black sheets while in some cases, as will be seen hereunder, there is a greater reduction from last week's quotations.

MONTREAL—	100 lbs.
10 gauge	$12 50
12 gauge	11 60
14 gauge	10 05
16 gauge	10 15
18-20 gauge	10 25
22-24 gauge	10 40
26 gauge	10 45
28 gauge	10 55

Good Demand For Heaters And Ranges

Montreal.

STOVES, RANGES, ETC.—The approach of winter has had the affect of stimulating the stove business and particularly in the sale of heaters has this been marked. Ranges also have sold well and deliveries are being freely made, notably to country dealers. Oil stoves for heating have come into strong demand owing to their popularity as a

chill remover in early fall weather when it is really too mild for the operation of the regular heating plant.

Gasoline And Coal Oil Remain Unchanged

Montreal.

GASOLINE.—There is a good demand for gasoline and the supply is ample. Coal oil is in active demand owing to the increased demand for and use of the small coal oil heater which has become very popular. There is a good supply here of the crude oil and this assures a supply for some time to come of the refined product. Royalite oil is selling at 17 cents per gallon, Palacine at 20 cents. Gasoline is being quoted to the retail trade at 32½ cents per gallon.

Rope Is Firm With Prices Unchanged

Montreal.

ROPE AND CORDAGE.—There is no great demand for rope at the present time. Prices are unchanged as yet but it would appear that there is no likelihood of lower quotations. The calling in of shipping by the various governments may eventually affect the supply of raw stock and this would have its own affect on prices. The new governmental regulation gives free access to our markets upon the part of the United States manufacturer and he has been in a position to secure supplies of raw materials on a favorable basis. The situation in rope for the immediate future will be interesting to watch. Cotton rope and sashcord are higher in price.

Still Downward Go Lead Products

Montreal.

LEAD PRODUCTS.—In conformity with the lowering of pig lead, some lines of manufactured lead products are lower this week. HARDWARE AND METAL has given its readers this intimation recently, and the following list will show some reductions in the price of sheet lead and of lead pipe and waste.

MONTREAL—	
Lead pipe, lb.	$0.15
Lead waste pipe, lb.	0.16
Lead traps and bends	20% on list
Lead wool, lb.	0.15
Lead sheets, 3 lbs. sq. ft.	0.13¾
Lead sheets, 3½ lbs. sq. ft.	0.13¾
Lead sheets, 4 to 6 lbs. sq. ft.	0.14

Old Lead Products In Weaker Tone

Montreal.

OLD MATERIALS.—The demand for old metals is very weak. Prices are still as quoted with the exception of heavy lead pipe, which is down 1c per pound, making the quotation 5c per pound. There is little business being done here.

MONTREAL—		
Tea lead	$ 0 04	....
Heavy lead pipe	0 05	....
Yellow brass	0 14	....
Red brass	0 20	0 21
Light brass	0 08	....
Scrap zinc	0 06	....
Heavy copper	0 22	....
Old cast iron, per gross ton	25 00	....
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy melting steel	20 00	....
Pipe scrap	15 00	17 00
Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 08	....
Overshoes, lumbermen's rubbers boots	0 06	....
Bicycle tires	0 03	....
Auto tires	0 05½	....

Tin Very Strong; Lead Interesting

Montreal.

INGOT METALS.—There is a noticeable stiffening of the price this week for tin with no available supply of ingot copper.

TIN.—There is an increased quotation this week in tin at 67 to 68c.

COPPER.—The available supply of copper is really nil, with no relief in sight for the immediate present.

LEAD.—The local market in pig lead is stronger but with no new local quotations. However, New York has named a price of $5.50 for pig lead, which is the Trust price.

SPELTER.—No change marks the market in this item. Prices are quoted from 10½ to 11½ cents.

ANTIMONY.—Market unchanged at 17c to 18c.

ALUMINUM.—Aluminum is moving fairly well at 60c.

TORONTO MARKETS

TORONTO, Nov. 1.—With several exceptions, the price changes in hardware lines have been in the upward direction. Soldering coppers is one line in which declines have been recorded. Also lead pipe and lead waste pipe have again declined, following an easier condition in the market for pig lead. Another important commodity in which there has been a decline is white lead in oil. Advances have been recorded in toilet paper, pine tar, cotton products, such as twine, sash cord, clothes lines, dog chains. Advances have been recorded in hollow-back scoops and snow shovels. Rivets and burrs have also been increased, the advance coming somewhat tardily in this district, as changes have been recorded in Eastern Canada for some little time. Business is reported good on sorting trade. While the orders in most instances are not large, they come more frequently.

Ash Cans And Sifters Go Higher

Toronto.

SIFTERS, ASH CANS.—An increase in the price of Samuel's ash cans and sifters has been made effective, the selling price to the retail trade now being $6, whereas the former price was $5.50 each. These cans and sifters go in combination sets. A feature of the manufacture this season is the use of black steel sheets in the manufacture of the ash can, the surface being painted with aluminum paint. Scarcity of galvanized sheets is given as the reason for this departure. There has been an extra heavy demand for ash sifters this season, manufacturers stating that the demand is greater than the capacity of their workshops. There is an evident desire abroad to economize in the use of coal, and for this reason there has perhaps been a heavier demand than usual. November is usually considered the month in which the greatest demand for ash cans and sifters develops. This year, however, the month of October was as heavy as November of last year, which is looked upon as an omen that November should be even better than usual. Garbage cans have been in good sale throughout the year, and prices are holding steady since the recent advance in August, when an advance of approximately 20 per cent. was made.

Forges And Blowers Make Big Advance

Toronto.

FORGES, BLOWERS.—A considerable advance was recorded in the price of blacksmiths' forges and blowers during the week through the changing of the discount. Eighteen-inch round pan riveted forge, No. 625, is now quoted at a discount of 20 per cent. off list, the former discount being 40 per cent. off list. An even heavier advance was recorded in blowers, where the price was formerly 10 per cent. on list, it has been increased to 40 per cent. on list.

Prices Of Alarm Clocks In Easier Tone

Toronto.

CLOCKS.—Owing to the lower prices that have recently prevailed in ingot brass, there has been an easier tendency in the price of alarm clocks and cheap watches. The representative of one large clock manufacturer put the situation as follows: "We do not look for higher prices, as there has been an easier tendency in brass within recent weeks, and that is the big factor in the manufacture of alarm clocks. We are of the opinion that the next movement will be in a downward direction, but when that will come we are not in a position to predict." Trade is reported good, with a continued good movement in the cheaper grades of watches.

Cotton Goods Make Another Advance Of 3c

Toronto.

COTTON PRODUCTS.—Due to the rapidly ascending tendency of the raw cotton market, higher prices have again been announced by the manufacturers of cotton twine, cotton rope and sash cord, the increase amounting to 3c per pound. Spot raw cotton reached very near the 30c level during the week, the high figure for the period being 29.9c per pound on New York market. Toward the end of the week, however, there was an easier tendency apparent through a sagging condition. What the future of the cotton market is cannot be foreseen, but as long as cotton continues to soar upward

the finished products are bound to follow. Following are the new prices that now prevail on the various lines of cotton goods:

Sash Cord—No. 6, 58½c to 60½c lb.; No. 7, 57½c to 59¼c lb.; Nos. 8, 9, 10 and 12, 57c to 58¾c lb.

Twine—Three-ply, 46½c to 58c lb.; four-ply, 50c to 62c lb.

Rope—Quarter-inch and up, 51¾c to 56c; 3/16-inch, 53c to 57½c lb.; 5/32-inch, 55¾c to 60½c lb.; ⅛-inch, 57c to 62c lb.

Clothes Lines—Forty-foot, $2.40 dozen; 48-foot, $2.90 per dozen; 60-foot, $3.60 dozen; 72-foot, $4.32 dozen; 100-foot, $6 dozen.

Awning Cord—Discouut of 25 and 5 per cent. off list, the former discount being 30 per cent.

Hollow Back Scoops And Riveted Scoops Up

Toronto.

SCOOPS.—Through the changing of the list prices on black hollow-back scoops, No. 2, an increase has been provided for, the former list being advanced $1, making first grade list price now $17.80 and fourth grade list price $14.80. First grade are subject to a discount of 10 per cent., while fourth grade are sold net list. On No. 2 black riveted back scoops the list has been advanced $1.50 per dozen, making first grade $19, second grade $18, and fourth grade $17. These list prices on riveted scoops are subject to a discount of 7½ per cent. on all three grades.

Snow Shovels And Furnace Scoop Lists Up

Toronto.

SNOW SHOVELS AND FURNACE SCOOPS.—An advance of $1 has been made effective on the list prices of Jones & Wolfe snow shovels, and the following list prices now prevail: Jones No. 20 and Wolfe No. 9, $9 dozen; Jones No. 30 and Wolfe No. 12, $10 dozen; Jones No. 40 and Wolfe No. 13, $12 dozen; Jones No. 50 and Claymore, $15 dozen. Above prices are subject to a discount of 12½ per cent. D-handle furnace scoops have also been advanced $1 on list, making price of Olds and Wolfe No. 11 now $10. Furnace scoops are subject to a discount of 12½ per cent.

Rivets And Burrs Have Been Moved Up

Toronto.

RIVETS, BURRS.—Although somewhat belated as compared with changes recorded in this line in the Eastern markets, the change has been made effective on the local market on iron rivets and burrs through the changing of the discount. Where formerly the discount was 17½ per cent. it is now 15 per cent. off list. Copper rivets and burrs remained unchanged.

Toilet Paper Up Approximately 20%

Toronto.

TOILET PAPER.—An advance of approximately 20 per cent. has been made effective in the price of toilet paper. This is the first advance to be recorded in this commodity for some weeks past. Prices on some of the various lines are as follows: Carnation, $7.85 per case; Daisy, $6.10 case; Duchess, $6.10 case; Poppy, $8.75 case.

Sporting Goods Show a Steadily Upward Tendency

SPORTING GOODS.—With the approach of the winter season hardware dealers have been turning their attention to the getting in of such sporting goods stock as will be required for the winter trade. One of the big sellers in the winter is hockey skates. These are expected to be as scarce as last season owing to the difficulty which the manufacturers have experienced in getting steel. With embargo on the shipment of steel from the United States, except where it can be shown that it is to be used for war purposes, there has been a considerable restriction of the manufacture on this account. There will still be some skates for sale but the number of lines will be restricted. This was a condition which prevailed last winter and there has been no improvement in the situation this year. There is a factor, however, which is working out toward a decreased demand. With 400,000 men in arms and overseas and with the prospect of a still further addition of 100,000 men being made to these numbers the field for the sale of hockey accessories has been greatly restricted. These men who are with the colors are, for the most part, of the athletic age and furnish the clientele in large measure for the sporting goods house. There is, however, still remaining an ever-increasing class which requires the bulk of the sporting goods. This consists of the younger element—the boys of public and high school age. Some progressive dealers see an opportunity to make good a loss through enlistments by the encouragement of the younger generation to a more general use of sporting goods. There are very few boys who need much encouraging to buy skates. The difficulty this year will be in getting a selection to provide for the needs of the trade. Manufacturers are doing their best to fill the need and keep their plants in working shape so that they can take care of this trade when the war is over. The supply of labor is restricted and the raw materials are difficult to obtain.

Tennis Goods Are Higher

One of the sporting goods lines which is now being booked by wholesalers for delivery next spring is tennis nets. Rackets are also in the same class and are being booked freely. The past summer has been a good tennis season, in spite of war conditions, and booking orders for delivery next season give promise of a good trade next year. This in spite of the fact that tennis nets are considerably higher in price than they were for the past season's deliveries. One prominent sporting goods dealer is authority for the statement that tennis nets are being booked at prices this fall which are fully 100 per cent. in advance of what booking prices were last fall. Another concern, however, states that stocks are fairly good and that so far as they are concerned prices will not advance. Tennis rackets are also approximately 10 per cent. in advance of what they were last season. The high price of cotton has been largely responsible for the advance in the price of tennis nets. As hardwaremen know, who have been following the market on such commodities as cotton twine, cotton rope, sashcord and similar lines, there has been a succession of advances during the past year in all these articles. These in turn have all been affected to the same degrees that the tennis nets have been affected. Advances in tennis nets may be more noticeable through the fact that booking is usually made at one particular season of the year.

Football Leather Hard to Get

Leather which formerly was used in footballs of a high quality has been practically unobtainable for some time past, but there is evidence of an easier condition. These footballs were largely made in England and since the war the leather has been turned into other channels for military uses. Boxing gloves and baseball gloves have been restricted in manufacture through the scarcity of leather, and prices have been high in accordance with the condition. Sporting goods dealers have still had a good demand for these goods from military sources where camps have been established in Canada, or when troops have been stationed for any length of time in a community. In spite of the drawback attending the sporting goods trade at the present time there is still a good field for business through the encouragement of the younger generation to indulge in athletic sports.

Soldering Coppers Decline 2c Per Pound

Toronto.

SOLDERING COPPERS.—A welcome price movement during the week was the decline of 2c per pound in the price of soldering coppers. Lower prices in the ingot metal have been a factor in sending prices downward. One-pound coppers are now quoted at 71c per pound, 1½-lb. at 68c, 2-lb. at 67c, 2½-lb. at 65c, and 3 lbs. and up, 64c per pound. The recent price of the latter was 66c per pound.

Pine Tar And Scythe Stones Higher

Toronto.

TAR, SCYTHE STONES.—Increases were recorded during the week on pine

tar and scythe stones, substantially higher prices having been made effective. Half-pints of tar are now quoted at $1.15 dozen and pint containers at $1.60 per dozen. Clear grit scythe stones are now quoted at $8 per gross. Advances in these lines have not been numerous, but have been sufficient to be part of the advancing throng of prices.

Dog Chain Prices Have Been Moved Upward

Toronto.

DOG CHAINS.—A change in price on American dog chains during the week provides for an increase in price. Six-foot length chains are quoted at the following prices: No. 7, $2.40 dozen; No. 6, $2.50 dozen; No. 5, $2.55 dozen; No. 4, $2.60 dozen; No. 3, $2.65 dozen; No. 2, $2.70 dozen; No. 1, $2.90 dozen; No. 0, $3.30 dozen; No. 00, $3.75 dozen. Nine-foot chain No. 3 is quoted at $3.80 per dozen. Peerless dog chains are now priced at $7.20 per dozen, and No. 115 at $5.35 per dozen.

Gasoline And Coal Oil Hold Unchanged

Toronto.

GASOLINE, COAL OIL.—There was a steadiness to the market for gasoline, coal oil and lubricating oils during the week. With the shadow of regulation standing as an effective bar, there has been no disposition to change prices in the United States, although the producers of crude oil are making strong assertions that higher prices should be forthcoming for their product by reason of the high cost of production. In the Canadian market pretty much the same condition prevails. Coal oil is now in good demand with the longer days and so much being used in oil heaters and oil stoves. Gasoline remained unchanged at 31½c and 32c per gallon, and coal oil at prices given in current quotations. Benzine is quoted at 30½c and 31c per gallon. Consumption of gasoline is less now that unfavorable weather for pleasure riding is here.

Maritime Rope Demand May Develop Soon

Toronto.

CORDAGE, TWINE.—Reports recently received from the Maritime Provinces indicate that a heavier demand for rope is likely to develop in the near future by reason of the shipbuilding that is now under way. When the ships get a little farther along toward the completed stage the contractors are expected to be in the market for supplies in considerable quantities. Arrangements are proceeding between the manufacturers of rope and the Eastern wholesalers for the handling of this business. There has been a continued good demand for small twines and shipments have been going forward to the Western districts in good quantity. Prices on cordage held steady during the week, there being no disposition to change prices. Fibre also held in a steady position. Sorting business for rope with the domestic trade is light at present. Prices on rope will be found in current quotations.

Coal Heaters In Extra Good Demand

Toronto.

STOVES, ENAMELWARE. — With strong evidences that real winter weather is not far distant in the offing there has developed during the week an extra good demand for coal heaters. Manufacturers have been busy making provision for orders that have been coming in by wire and mail after the snow-flurries and chilling breezes started the people to think that winter weather must be provided against. Ranges have been in quieter demand during the past week in favor of heaters. Manufacturers are making shipments from stock as fast as they can get them out. Prices on stove lines remained unchanged during the week. Enamelware also held in steady position, with prices unchanged and fair demand.

Tarred Fibre Paper Declines 9c Per Roll

Toronto.

BUILDING PAPER.—A movement in the downward direction was recorded in tarred fibre paper No. 2 during the week to the extent of 9c per roll, making the quotation now 70c per roll, as against the former price of 79c. One line of ready roofing, on the other hand, has been advanced in price. Samson one-ply has advanced 20c per roll, and is now quoted at $1.90; two-ply is up 15c per roll at $2.50; while three-ply Samson has been advanced to $3.10, an increase of 20c per roll. The decline in building paper follows in the wake of a similar movement within recent weeks.

Brooms Make Advance Of Approximately 10%

Toronto.

BROOMS, BRUSHES.—One of the large manufacturers of brooms announced an advance of approximately 10 per cent. on all their broom lines during the week, which now brings the price of the cheapest broom to the retail trade at $6.60 per dozen. It was hoped that with the coming of the new crop of broom corn lower prices might prevail, but there is no indication as yet that this commodity will be any cheaper in price. Brushes are holding in steady position, although in a firm market. Intimations are made in certain quarters that an advance is not improbable about the first of the New Year. Manufacturers state the supply of bristles is getting low, with the possibility that further purchases will have to be made at greatly enhanced prices, if indeed they can be secured at all. The Russian and French sources of supply is now largely cut off, and, owing to the transportation difficulties, the Chinese source is very materially curtailed.

Market For Nails And Wire Steady

Toronto.

NAILS, WIRE.—Conditions in the wire nail market continued much as they have been within recent weeks. Owing to the curtailment of building operations there is a light demand for nails at the present time. In the majority of instances prices were still quoted at $5.45 per hundred pounds base, with cut nails at $5.80 per hundred pounds base. Wire products remained unchanged, the base price of smooth steel wire being $6.50 per hundred pounds.

Deliveries Of Iron And Steel Improving

Toronto.

IRON AND STEEL.—Dealers in iron and steel report that Canadian mills are now in a better position to make deliveries, and that goods on contract have been coming forward within the past week or two with much better despatch. It was feared at one time that the order of the Munitions Board stating that domestic merchant trade must forego shipments during the month of August might extend into other months. Happily this has not been the case, and sufficient supplies are coming forward to meet normal needs. Prices were unchanged.

TORONTO—	Per 100 lbs.	
Common bar iron	....	$ 5 25
Common bar steel	....	5 50

Mining tool steel	19 00	26 00
Sheet cast steel	30 00	35 00

Black Sheets Again Decline $1 Per Hundred

Toronto.

SHEETS, PLATES.—Following the declines recorded in black sheets last week, one concern announced a further decline during the present week. Low quotations are now as follows: No. 12 gauge, $9.05 per 100 lbs.; No. 14 gauge, $8.95; No. 16 gauge, $9; Nos. 18-20, $7.80; Nos. 22-24, $7.85; No. 26 gauge, $7.90; No. 28 gauge, $8; No. 29 gauge, $8.10 per 100 lbs. The same concern made a cut of 95c per hundred pounds in the price of galvanized sheets, which now makes the price as follows: 10¾-oz., $10.30 per 100 lbs.; No. 28 gauge, $10; No. 26 gauge, $9.70; Nos. 22 and 24, $9.55; Nos. 18 and 20, $9.40; No. 16, $9.25; No. 14. $9.15 per 100 lbs. Lower prices are attributed to the fact that arrivals of orders on contract have been good within recent days. Heavy gauges of plate, however, hold in strong position.

TORONTO— BLACK SHEETS—	Per 100 lbs.	
10 gauge	$	$12 00

Corrugated Sheets In Slower Demand

Toronto.

CORRUGATED SHEETS.—With the uncertainty that prevails in the market for corrugated sheets there has been a tendency to slow up business. Dealers expect some announcement will be made in the United States about November 1 with respect to price-fixing on materials which affect the price of these sheets. They point out, however, that Canadian prices on corrugated sheets have not been on a parity with prices in the United States, and that a very material reduction in price would have to be made in that quarter before the present Canadian level is reached. Conductor pipe and eavetrough held in a steady position, discounts still being quoted at 10 per cent. off list.

Can Only Bring Forward Boiler Tubes As Needed

Toronto.

BOILER TUBES.—A reversal of the situation in boiler tubes was made during the week, due to arrangements with authorities at Ottawa. Until a few weeks ago an embargo placed by the United States Government permitted these goods to come forward only on license. Some local concerns had succeeded in getting permits to bring forward some supplies in carload lots. Before these stocks had the opportunity to arrive, this decision has been superseded by a ruling which permits tubes to come forward only on application for each particular piece of work. The merits of each case, in other words, must be the deciding factor. From this it would seem that stocks will not be shut out of this market entirely, but will be permitted to come forward when dealers show that they have a good and sufficient reason for bringing them forward. In the meantime stocks now being held by dealers are getting low. Prices, however, remained unchanged.

Lead Pipe And Waste Pipe Again Decline 1c

Toronto.

LEAD AND ZINC PRODUCTS.—A further decline of 1c per pound was recorded during the week in lead pipe and lead waste pipe, making the selling price now 15c per pound on lead pipe and 16c per pound on lead waste pipe. Traps and bends remain unchanged at 20 per cent. on list. Other lead products remain unchanged, although in a weaker position, due to the big declines that have recently taken place in the primary pig lead market. Quotation in the New York market was made by the leading producer as low as 5½c per pound during the week, which just cuts the price of pig lead in two as compared with six months ago.

Old Materials Take Big Slump In Price

Toronto.

OLD MATERIALS.—With the possibility that prices on old materials are to be regulated by the United States Government something in the nature of a bomb was thrown, which scattered the prices of old materials in a downward direction. Tea lead declined 2½c per pound to present quotation of dealers at 4c. Heavy lead pipe was down 2¾c per pound, the quotation now being made is 5½c. Yellow brass declined 1c per pound, and is now quoted at 12c to 13c per pound, while red brass is down 1c at 19c per pound. Light brass declined ½c to 1c, and is now quoted at 9c as the price being paid by wholesale dealers. Heavy zinc declined ¼c to ½c per pound, and is now quoted at 5½c to 6c. There is very little selling on the part of collectors at the present time, as wholesale dealers are showing a disposition to let up on buying.

Lead Reacts After Slumping In Primary

Toronto.

INGOT METALS.—The feature of the ingot metal market during the week was the further decline in lead in the primary market to the low point of 5½c, at which considerable buying developed and put strength into the market. Tin was also much stronger in the primary market, and in the local market recorded advances.

COPPER.—There was a steadiness in the local market for copper, but the primary situation gave evidence of a weaker undertone by reason of the fact that dealers other than the producers made lower quotations than those at which they had recently held the metal. Prices locally held at 32c for casting and 33c for electrolytic.

TIN.—There was a movement upward in the prices of tin locally, quotations being made at 65c to 66c per pound, representing an advance of 1c to 1½c. In the primary market in New York there was a good demand, with very little tin available on spot to care for the demand. Prices in that market were only ½c lower than the local market.

SPELTER.—Spelter demand shows improvement locally, with prices unchanged at 10c per pound. A report to the effect that some of the producers in the United States are going out of the business, and that in the hope of stabilizing conditions production would be curtailed.

LEAD.—There was a further decline in the primary market on the part of the Trust to 5½ per pound, at which point considerable buying developed and a turn in the market was apparently reached. As a result independents quoted higher by ¼c to ½c per pound, and any available lead at the low quotation was quickly taken up. Prices held unchanged in the local market at 9c to 9½c per pound.

ANTIMONY.—The market continues weak, with little activity and quotations were unchanged locally at 18c per pound.

ALUMINUM.—Prices held unchanged at 60c per pound. The market is quiet, with demand small.

PIG IRON.—Prices on pig iron held steady and at firm levels. There seems little possibility of lower prices in the Canadian market for the first three months of the New Year at any rate, as producers are booked up for a considerable portion of the first quarter. Canadian furnaces are still operating on high-priced coke, and this is keeping prices high.

Discounts On Automobile Chains

Toronto.

TIRE CHAINS.—In our issue of October 20 the discounts on Imperial and Dreadnought automobile tire chains was given as 25 to 30 per cent. According to statements by the manufacturers, the discount on these chains to the retail trade is 30 and 5 per cent. in lots of less than fifty and 30 and 10 per cent. in lots of fifty and over. List prices on Dreadnought 30 x 3½ is $4.50 and Imperial $3.30. Size 34 x 4 Dreadnought list price is $5.50 and Imperial $4.30.

LONDON MARKETS

LONDON, October 31. — There is a steady sale for all seasonable lines with prices firm. The general feeling is that goods will be higher in price rather than cheaper. Many lines of metal goods are very hard to procure and deliveries are slow. Business continues good. Advances are recorded on cotton goods, stove casters, hand cleaner, Hungarian and hob nails and turpentine. A decline is registered in white lead.

Prices On Cotton Goods Advance

London.

COTTON GOODS.—A further advance has been made this week in prices on various lines of cotton goods as follows:

Sash Cord has advanced 3 cents per lb. to the following prices: No. 6, 58½c. per lb.; No. 7, 57½c per lb.; No. 8-12, 57c per lb.

Cotton Rope is advanced 2c per lb., bringing present prices to the following: 3-16 in. rope, 53c per lb.; ½ in. and larger rope, 52c per lb.

Cotton Twine in 3-ply is priced at 56c per lb., and in 4-ply at 60c per lb.

Cotton Clothes Lines are priced as follows: 30 ft., $2 per doz.; 48 ft., $3 per doz.; 60 ft., $3.65 per doz.

Braided Awning Cord prices are as follows: No. 3, $1.65 doz.; No. 3½, $1.90 doz.; No. 4, $3 doz.; No. 4½, $4 doz.

Candle And Lamp Wick Also Advance

London.

CANDLEWICK, TWINE. — Carrying through the advance in the cotton market, prices on candlewick have been advanced to 56c per lb.

Seine Twine is quoted as follows: No. 18 and larger in 1-lb. lots, 66c per lb.; No. 15 and smaller, 67c per lb.; No. 18 and larger in ¼-lb. lots, 67c per lb.; No. 15 and smaller, 68c per lb.

Cotton Bag Twine is quoted at 67c per lb.

Lamp Wick

New prices on lamp wick are higher as follows: No. 0, 60c per roll; No. A, 75c per roll; B, $1.05; D, $1.65 per roll.

Hungarian And Hob Nails Advance

London.

HUNGARIAN AND HOB NAILS.—An advance of $2 per 100 lbs. has been made in the prices on Hungarian and hob nails. Prices quoted herewith are for 1 lb. packages:

11, 12, 13 ga. and heavier: ⅜ and shorter, $17.40 per 100 lbs.; 3 2-8 and longer, $16.90 per 100 lbs.

14 ga.: ⅜ and shorter, $18.50 per 100 lbs.; 7/16 and longer, $18 per 100 lbs.

15 ga.: ⅜ and shorter, $19.30 per 100 lbs.; 7/16 and longer, $18.80 per 100 lbs.

Usual extras for small packages.

Hand Cleaner, Stove Casters Advanced

London.

HAND CLEANER.—New and higher prices are quoted this week on Snap hand cleaner. Present prices are $5.40 per case of 3 doz.

Stove Casters

An advance has also been made in the price on Adams Stove Casters, which are now selling at $1.50 per set.

Nails

No change has been made in the price of nails at $5.45 base for wire nails and $5.75 base for cut nails.

New Prices On Poultry Fence

London.

POULTRY FENCE.—New prices have been made on Blue Ribbon American poultry fence for present and spring booking as follows: 10 rods to roll: 24 in., $4.30 per roll; 36 in., $5.50 per roll; 48 in., $6.50 per roll; 60 in., $7.65 per roll; 72 in., $8.75 per roll.

Rope

Rope prices are unchanged this week at the following quotations: Pure Manila, 39c base; British Manila, 33c base; New Zealand hemp, 33c and Sisal, 27½c base.

Bucksaws, Shovels, Weather Strip

London.

BUCK SAWS.—Prices on buck saws this week are steady at $8.70 per doz. for Happy Medium and $11.70 per doz. for Prince Rupert.

Snow Shovels are quoted this week at 12½ per cent. off list.

Weather Strip

Common wood and felt weather strip is quoted at 75 per cent. off list; Swan hardwood strip is 75c per set. Frost King is $4.40 per doz. pkgs.

Cow Chains are quoted at 12½ per cent. off list.

Sash Weights; Skates; Sifters

London.

SASH WEIGHTS.—Solid 3-lb. and larger sash weights are quoted at $3.50 per 100 lbs. Sections ½-lb. weights are $4.50 per 100 lbs. and sections 1-lb. are $4.25 per 100 lbs.

Hockey Skates

Starr hockey skates are quoted at 30 per cent. off list.

Ash Sifters

A good sale for ash sifters is reported at following prices: $5.25 each for No. 1 rocker; Banner sifters, $2.90 each, and common wood sides sifters, $2.15 doz.

Lanterns; Globes And Batteries

London.

LANTERNS.—Lanterns in long and short pattern are quoted at $12 per doz.; lantern globes, long and short pattern, are as follows: 1 doz. cases, $1 doz.; 3-doz. cases, 90c doz.; 6-doz. cases, 85c per doz.

Flashlight Batteries

Flashlight batteries and cases are quoted this week at 33 1-3 per cent. off list.

Decline In White Lead In Oil

London.

WHITE LEAD IN OIL.—Lower prices are quoted this week on white lead in oil as follows:

Pure lead in ton lots, $16.20 per 100 lbs.; less than ton lots, $16.55 per 100 lbs.; Elephant Brand pure lead is $16.80 per 100 lbs. in ton lots, and $17.15 per 100 lbs. in less than ton lots.

Putty

Putty prices are unchanged, with a good sale this week. Standard putty in drums is $4.75 per 100 lbs., and pure putty, $5.75 per 100 lbs.

Advance Registered In Turpentine Prices

London.

TURPENTINE.—An advance of 2c per gal. has been made in turpentine prices, with a fair demand. New prices are: 77c per Imp. gal. for 1 bbl. lots; 76c per Imp. gal. in 2 to 4-bbl. lots; 84c per gal. in 5-gal. lots.

Linseed Oil

Linseed oil is steady in price at the following quotations:

	Raw, per gal.	Boiled, per gal.
1 to 2 bbls.	$1.37	$1.40
3 to 5 bbls.	1.36	1.39
6 to 9 bbls.	1.34	1.37

Glass

Glass prices are firm this week at 50 per cent. off for single and double diamond and 40 per cent. off for cut lights.

WINNIPEG MARKETS

WINNIPEG, October 31.—Business for the past week although only moderate in shelf goods shows increased activity in such seasonable lines as sleighs, skates, hockey sticks and cutlery.

Markets for the week continue very firm on all lines of heavy goods, but show numerous advances in general hardware, among which are stove pipe wire, calf weaners, lamp wick, clothes lines, brass butts, Carll wrenches, lace cutters, and washing machines, while soldering coppers register a decline.

Cream Freezers Up 10 Per Cent

Winnipeg.

ICE CREAM FREEZERS. — New prices have just been announced by the manufacturers of ice cream freezers, which show an advance of approximately 10% over last year's prices, and orders for 1918 shipment are being accepted on this basis at prices mentioned herewith.

Blizzard, 2-quart, $2.45 ea.; 3-quart, $2.90 ea.; 4-quart, $3.50 ea.; 6-quart, $4.50 ea. Lightning or Gem, 4-quart, $3.95 ea.;

6-quart, $5 ea.; 8-quart, $6.50 ea.; 10-quart, $8.60 ea.; 12-quart, $9.50 ea. Crown with fly wheel, 14-quart, $17.50 ea.; 18-quart, $22.50 ea.; 24-quart, $27 ea.

Wrenches And Lace Cutters Advance

Winnipeg.

CARLL WRENCHES. — Prices on Carll wrenches show the first advance during the year, which is approximately 10% and are quoted to-day at 6 in., $10.40 doz.; 10 in., $16 doz.

Lace Cutters

Further advances have occurred in the prices of Empire lace cutters and price quoted to-day is $4.80 dozen.

Iron And Steel Prices Firm

Winnipeg.

IRON AND STEEL.—New prices established by the United States Government on iron and steel, as predicted, have had no immediate effect on the Canadian markets with all prices remaining firm as quoted below.

Bar Iron—3-16 in. ¼ in. and 5-16 in., $8.05 base; ⅜ and 7-16 in., $6.10 base; other sizes, $5.60 base; sleigh shoe steel, $5.80 base; spring steel, $6.50 base; machinery steel, $7.50 base; tool steel octagon, 18c lb.; plow steel, common, $6.50 per 100 lbs.; crucible, $7.50 per 100 lbs.; tire steel, $5.60 per 100 lbs.; angle steel, $5.35; harrow tooth steel, $5.50 base.

Wire Nails

There has been no further change in the markets on wire nails during the past month and prices on all wire products continue very firm. Wire nails are quoted to-day as follows: F.o.b. Fort William, $5.60 base; f.o.b. Winnipeg, $6 base; cut nails, f.o.b. Winnipeg, $6 base.

Prices Advanced On Washing Machines

Winnipeg.

WASHING MACHINES.—In a recent issue of HARDWARE AND METAL were shown advances in a couple of lines of washing machines and predicted further revisions which have just been put into force. New prices, however, affect only two lines, namely, New Century B. and Playtime. To-day's prevailing prices are as follows: Dowswell, $4.75 ea.; New Century B., $10.15 ea.; New Ideal, $11.35 ea.; Playtime, $11 ea.; Snowball, $8.50 ea.

Big Advance On Calf Weaners

Winnipeg.

CALF WEANERS.—One of the heaviest advances yet recorded has just become effective on Shaw's Genuine Calf Weaners, showing an increase of 15 to 20%. Prices prevailing are as follows: No. 1, $4.60 doz.; No. 2, $5.85 doz. Hoosier calf weaners also show an increase and are to-day quoted at $6 doz.

Stove Pipe Wire

Further advances in stove pipe wire by the manufacturers has necessitated a further revision in Winnipeg selling prices and to-day's market prices are as follows: 18 ga., $8.50 per 100 lbs.; 19 ga., $9 per 100 lbs.

Advance Made On Cotton Lines

Winnipeg.

CLOTHES LINES, WICK AND ROPE.—Owing to the recent advances in the cotton market it has been necessary to revise prices on lamp wick, clothes lines and cotton rope, which are quoted as below.

Lamp wick, flat—No. 0, 63c gross; No. A, 79c gross; No. B, $1.15 gross; No. D, $1.83 gross.

Rochester—No. 1, 35c doz.; No. 2, 50c doz.; No. 3, $1.65 doz.

Stove wick, flat—3 in., 43c doz.; 3½ in., 50c doz.; 4 in., 57c doz.; 4½ in., 65c doz.; 5 in., 70c doz.

Cotton clothes lines—48 ft., $3 doz.; 60 ft., $3.50 doz.

Cotton rope—3-16 in., 56c lb.; ¼ in. and over, 55c lb.

Prices Advanced On Brass Butts

Winnipeg.

BRASS BUTTS. — Prices on brass butts, which have remained steady for the past year, now show an increase of about 33% and are quoted to-day at:

Narrow—1 in., 45c doz.; 1¼ in., 65c doz.; 1½ in., 73c doz.; 1¾ in., 95c doz.; 2 in., $1.12 doz.; 2½ in., $1.96 doz.

Middle—1½ in., 84c doz.; 1¾ in., $1.06 doz.; 2 in., $1.29 doz.; 2¼ in., $1.82 doz.; 2½ in., $2.40 doz.

Broad—1¼ in., 76c doz.; 1½ in., 95c doz.; 1¾ in., $1.18 doz.; 2 in., $1.46 doz.; 2¼ in., $2.10 doz.; 2½ in., $2.80 doz.

Soldering Coppers

Soldering coppers, which have been advancing steadily since the commencement of the war, have declined with the copper market and show a reduction of 4c per lb. To-day's prices are as follows: 3 lbs. and over (base), 64c lb.; 2½ lbs. and over, 65c lb.; 2 lbs. and over, 66c lb.; 1½ lbs. and over, 67c lb.; 1 lb. and over, 70c lb.

Advance Expected In Game Traps

Winnipeg.

GAME TRAPS.—The demand for game traps still continues to grow and newspaper reports of the extraordinary high prices prevailing at the sale of furs recently held in New York is expected to further stimulate the demand for traps. Although prices remain firm on the Winnipeg market, advances are now quoted in the United States and may be expected to affect the Winnipeg market in a short time. Prices ruling to-day are as follows:

Victor—No. 0, $1.58 doz.; No. 1, $1.86; No. 1½, $2.80; No. 2, $3.90; No. 3, $5.20.

H. and H.—No. 1, $2.86 doz.; No. 1½, $4.29; No. 2, $6; No. 3, $8; No. 4, $9.45.

Jump.—No. 1, $2.40 doz.; No. 1½, $3.65; No. 2, $5.33; No. 3, $7.08.

Newhouse—No. 2½, $13.62 doz.; No. 3½, $15.27; No. 4, $13.62; No. 4½, $33.05; No. 50, $70.30; No. 5, $99.25.

Prices Firm On Oil And Turps

Winnipeg.

LINSEED OIL. — Although the flax market is very unsettled linseed oil continues firm, showing no change over previous quotations and is quoted as follows: Raw, $1.57 gal.; boiled, $1.60 gal.

Turpentine

Turpentine prices continue firm and show no change over former quotations, namely: Bbls., 80c gal.; ½ bbls., 83c gal.; 5 gals., 85c gal.; 1 gals., 85c gal.; plus usual charge for containers.

PITTSBURG MARKETS

PITTSBURGH, PA., Oct. 27.—The chief topic of discussion in iron and steel trade circles the past few days is the rumor that has been circulating freely in Pittsburgh and New York that the Government has called a halt in the price fixing programme. No specific authority is cited for the rumor, and different members of the trade have different views about it. Some insist that there is no possibility of the Government doing anything but carry out its announced programme in full, and it may be recalled that early in the operation the statement was made, apparently upon the authority of the War Industries Board, that prices were to be fixed on "about 150 articles" of iron and steel. Others in the trade insist that there is something in the rumor, and point out that it would be a perfectly natural and reasonable procedure. A general price level has been clearly established. Prices have been set practically covering all pig iron; practically all unfinished steel such as billets, large and small; sheet bars, slabs and wire rods have had prices attached; and bars, shapes and plates, which comprise about one-half the finished steel output, have been fixed. As it was the intention to have all other prices set in relation to these, the trade can be left to develop these in a rational manner, if it can. If it cannot, then the operation of price fixing can be resumed at any time. Frank A. Scott, chairman of the War Industries Board, is reported to have resigned on account of ill health and to have gone to a sanatarium.

New Wire Prices

What the trade considers rather a curious thing is that the American Steel & Wire Co. has promulgated new prices, to be effective as from October 24. These prices represent advances of $2 a ton on plain wire, also galvanized; and $6 a ton on wire nails and barb wire, making nails $3.50. In some quarters the present action is interpreted as foreshadowing a Government fixing of prices at the $3.50 level, while in other quarters it is held that the advance may mean that the wire trade is expected to find its level. If the latter interpretation is correct it means that that War Industries Board will give the independents an opportunity to drop to $3.50 and if they do not it will resume price fixing.

Break in Sheets

A spectacular break has occurred in the sheet market. Last June and July it was difficult to buy at 8c, except in special circumstances, and considerable tonnages were sold at 9c and higher, in both black and blue annealed. It was not until about 30 days ago that sheets became easily obtainable at 8c. Ten days ago it was difficult if not impossible to buy at 7c.

WEEKLY PAINT DEPARTMENT

Selling to the Farmer

Prosperity of Farmers Opens Field for Sale of Paint—Value of Property Enhanced by its Use—Now is Time to Push Interior Lines—Appeal to the Women—Making the Farmer the Painter.

THE sale of paint to the farmer is by no means an impossible task. It is really a case of pushing for this trade aggressively—educating the farmer to a point where he will realize the protective value to his buildings apart from the enhanced appearance.

Farmers are to-day enjoying a period of prosperity which they never anticipated. They are buying automobiles—they are taking trips to the cities—they are expanding in many ways, but are they buying paint? And if they are not, why not?

The high price that paint has attained is no argument for the farmer to use for not wanting to improve his property. The produce which the farmer now markets has made strides in value far greater than that made by paint. And what extra cost is really involved in a little job of painting? Most certainly it isn't an amount to cause worry to the affluent farmer.

By painting his buildings, the farmer displays good management. Paint enhances his property value not only from the standpoint of appearance—a mighty important feature too, in effecting a sale—but from real wear and tear value. Investigations conducted indicate weather wear junks more farm machinery, takes down more fences and makes more repair jobs on a building than anything else. Aren't these then, sufficient arguments to use on a farmer to convince him of the value of paint.

But what about the inside of the farm home? Because the farmer is outside from morning to night is no reason why the house needs no decorating. There is no farmer, if the point is mentioned to him, who wants his wife cooped up in shabby quarters. But the fact remains—there are many women on the farms whose lives would be decidedly brightened by the application of a little paint throughout their rooms. Cheerful surroundings make for cheerful dispositions and with the long, dark nights of winter approaching, every farmer and his wife should be solicited on the question of brightening up the interior of their home.

Making an appeal to the women should not be overlooked. In the majority of cases, it will be the woman who selects the colors and why shouldn't she, when the fact of her being in the home the greater portion of the time is considered. There is no doubt but that the merchant can assist in the selection of colors which will harmonize and it is important that he advise against combinations which will appear gaudy or freakish. All colors, though nice in themselves, do not harmonize and the selection of suitable shades should concern every merchant.

The appearance of farm buildings adds materially to their value; the interior of the home adds not only to its value but there is no farm mistress but who likes the appearance of her home to be equal to that of her neighbor's. There are a great many angles from which the merchant can make his appeal to the farmer and his wife and the development of this trade should be on the increase now. Interior painting can be done by the farmer himself. Do not overlook the opportunity to impress this fact on his wife as well as point out to him the saving in outside labor. The sale of paint to the farmer is just in its infancy—the present wave of prosperity sweeping over the country should influence sales of paint which the farmer can well afford. A strong push on all interior finishes from now until the end of the year should show splendid results.

TRADE INQUIRIES

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting address.

1350. A member of an important firm in Buenos Aires, Argentine Republic, is in Canada for the purpose of making connections with Canadian manufacturers of the following articles: Agricultural and garden tools; woodenware, including household sanitary, tables, chairs, ladders, camp-beds, etc.; household tinware, and enameled hollow-ware, rubber goods, including mechanical and domestic, also overshoes, lawn mowers, bath tubs, fibre-board, pulp-board, straw-board, heeling stock, etc., twine, cordage, fibre matting.

1353. **Pyrites.**—A fertilizer company in the United States requires regular shipments of Canadian pyrites. Would purchase ten carloads weekly and would be glad to pay cash when loaded on cars if necessary.

1257. **Roofing felts and builders' materials**—A Liverpool firm wishes to receive prices and samples of roofing felts for present or after-the-war business. They also wish to hear from exporters of any line of builders' materials.

1363. **Wire.**—A British company handling metals wish to act as European selling agents after the war for a Canadian wire-drawing factory able to supply copper, steel and nickel wire and similar products.

1365. **Building materials.**—A commission merchant in Valparaiso, Chile, who has a large connection among the constructional engineering professions would like to make arrangements to represent Canadian manufacturers of building materials and all articles connected with the building trades.

1367. **Metallic.**—A Genoese house interested in cobalt and stellete high-grade steel, and importers of same, is prepared to buy metallic cobalt and stellete.

1368. **Toys.**—A firm in Genoa which is one of the oldest and largest toy establishments in Italy is anxious to hear from Canadian manufacturers of same.

1369. **Castings and rolled steel.**—An engineer in Milan, with references in Great Britain and the United States, desires to hear from Canadian manufacturers interested in steel castings for railways and tramways cars, drums and discs for steam turbines, shafts for steamers and railway and tramway points and crossings.

1371. **Agricultural implements and motor tractors.**—A farmers' trading company of New Zealand wishes to arrange for the representation of Canadian manufacturers of the above-named articles.

1372. **Wooden tea trays.**—A London house who are already agents for one important Canadian company would like to arrange to represent Canadian manufacturers of the above articles.

1373. **Wire, plain galvanized and barbed.**—A Buenos Aires firm of English nationality would be pleased to undertake the representation of any Canadian manufacturer in the above-named lines.

1374. An English house at Buenos Aires, having connections with English railways and Government buying departments, wishes to represent Canadian manufacturers of the following lines: Lumber, heavy chemicals, iron sheets, iron and steel, wires, railway material and railway supplies.

1376. **Show cases.**—An importer in Belfast, Ireland, wishes to get into communication with Canadian manufacturers of show cases.

1378. **Rope, twine, nails, hoop-iron, etc.**—A firm of merchants in Cape Town, South Africa, wishes to get in touch with Canadian manufacturers of rope, twine, nails, hoop-iron, etc.

1379. **Galvanized buckets.**—A hardware firm in Barbados would like to receive catalogues of galvanized pails and buckets from Canadian manufacturers.

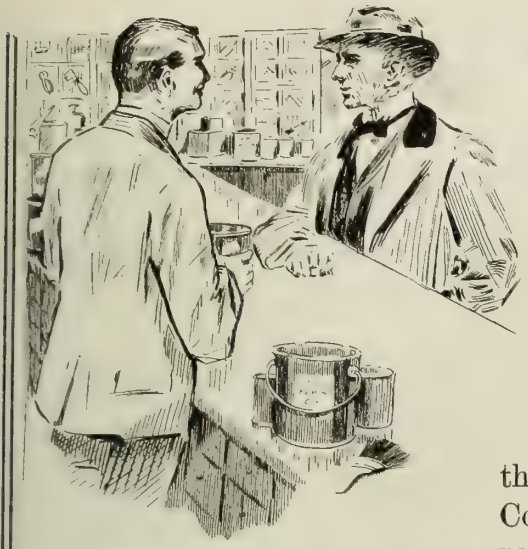
"There's this advantage in painting in the Fall"



Moore's House Colors Give Good Results In any Season.

"The cooler weather means slower drying, and slower drying means a more durable finish."

Here's a strong and reasonable argument with which to combat the prevalent idea that Spring is the only time to get good results from Moore's House Colors. Then, too, the absence of flies and dust is a factor that makes for a more satisfactory job. Moore's House Colors are made from the very best and most lasting pigments combined with Pure Linseed Oil, and the best liquid dryers. Dries hard, but retains sufficient elasticity to prevent cracking and peeling.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Oct. 31.—The week's interest centres around white lead in oil again this week. Following the decline of a week ago there has been a further price reduction in the price of white lead in oil. There would appear to be an upward trend due for turpentine as one dealer already quotes two cents higher per gallon on what is being sold. Linseed oil demand is good with prices firm.

Linseed Oil In Steady Condition

Montreal.

LINSEED OIL.—There is no new feature in the oil market as affecting linseed products this week. The demand is fair with one dealer reporting a good demand. At present prices, a considerable amount of booking is being done for delivery up to January 1, 1918. Beyond that date, there is an unwillingness to quote prices.

Turpentine Slow; Trend Is Upward

Montreal.

TURPENTINE.—There is not a great demand for turpentine, although sorting orders are fair. Prices remain firm, while on large dealer reports two-cent per gallon advance over the prices named in last week's report. As the season advances it becomes evident that the car situation is more difficult, and this will necessarily tend to aggravate a situation that already has been severe.

Quotations this date are as follows:

Turpentine	Per Imp. gal.
1 to 5 bbls.	72c. to 75c.

White Lead In Oil One Fifty Lower

Montreal.

WHITE LEAD IN OIL.—This week marks another big decline in white lead in oil. HARDWARE AND METAL has given some indication for the past while as to the likely trend of this market and its indicated probable downward trend is again borne out. Pig lead has not recovered from its downward trend and this is largely responsible for the weakened condition of white lead in oil. There is a straight drop this week of a dollar and a half in the five ton lot price, and quotations now made are as follows:—Five ton lots $15.50 per 100 pounds; one ton lots, $16 per 100 pounds; and $16.35 per 100 pounds for less quantities. These prices apply to standard lines. The movement of lead in oil is just fair. Pig lead is reported slightly firmer in the New York market.

Mixed Paints Are In Fair Demand

Montreal.

MIXED PAINTS.—There is a fair demand of a sorting nature for mixed paints and prices remain firm. It will be remembered that prevailing prices of to-day are those based on the lead quotations of last spring, consequently there has been no change incident to the fluctuation in white lead in oil. There is a good demand even now for mixed paints and one dealer reports the October demand better than for several years. Bookings from country points as for spring delivery are coming in well and the outlook is good.

Putty Unchanged; In Fair Demand

Montreal.

PUTTY.—There is no new development in putty. This is moving out in fair quantities and the supply is normal. Last week's prices are still ruling. The whiting used, coming from England as it does, might be affected only insofar as shipping is concerned. There is a fair supply of stock in hand and yet this is said to be not very great. Prices are:—Standard bulk putty in barrels, 5 ton lots, per 100 pounds, $3.25; 1 ton lots per 100 pounds. $3.40; less than tons per 100 pounds, $3.60.

TORONTO

TORONTO, Nov. 1.—The outstanding feature in the market pertaining to paint materials is the decline in white lead in oil. This follows on the heels of a declining market for pig lead. At the present time the downward movement in pig lead seems to have been arrested, but the market is one which holds uncertainties. Linseed oil held in steady position during the week and turpentine prices were also unchanged from those of previous week's quotation. Glass is in very firm position, some dealers asserting that they are contemplating advancing their prices. Sorting business on paint lines for the most part has been reported fairly good. Spring booking business on paint is proceeding and fairly good orders are reported.

Linseed Oil Held In Steady Market

Toronto.

LINSEED OIL.—There was a steady market for linseed oil during the week so far as price movements are concerned, the range on raw linseed oil remaining the same as last week at $1.37 to $1.41 per gallon in single barrel lots. Judging from the movement in the flaxseed market during the week there was a slightly easier tone, cash seed being quoted on Thursday of last week at $3.09 per bushel, and on Wednesday of the present week at $2.95. The December option ruled lower also, although not to such a marked degree, the decline in that instance being 7½c per bushel. There has been a good movement of flaxseed in the Western provinces during the week, ranging from 15 to 40 cars per day. Locally, the demand for linseed oil has been fair. Oil cake is holding steady at recent quotations with a good demand keeping up.

	Raw. Imp. Gal.	Boiled. Imp. Gal.
1 to 2 bbls.	$1.37-$1.41	$1.40-$1.44
3 to 5 bbls.	1.36- 1.40	1.39- 1.43
6 to 9 bbls.	1.34- 1.38	1.37- 1.41

Turpentine Prices Are Holding Firm

Toronto.

TURPENTINE.—Prices for turpentine held steady during the week at the range of 74c to 77c per gallon in single barrel lots. Prices in the primary market also held uniformly steady at recent high quotations, there being no evidence of any weakening element in the market. Stocks of turpentine in the local market are low, one concern at least being out of the market for the time being owing to the failure of stocks to arrive. Transportation of supplies from the Southern United States is coming to be more of a factor in getting turpentine into this market. As winter progresses this condition is not expected to improve.

	Imp. gal.
1 barrel	$0.74-$0.77
2 to 4 barrels	0.73- 0.76
5 gallon lots	0.82- 0.85

White Lead In Oil Declines $1.30 Hundred

Toronto.

WHITE LEAD IN OIL.—A decline of $1.30 per hundred pounds was registered in the price of white lead in oil during the week on standard grades with a decline

WANTED — RELIABLE, ENERGETIC hardware clerk, 8 to 12 years' experience. Capable of taking charge. Apply, stating salary and giving full particulars, to Box 170, Hardware and Metal, Toronto.

The firm who inserted the above advertisement in HARDWARE AND METAL showed good judgment.

Naturally, replies would only come from clerks who were in the habit of reading HARDWARE AND METAL—and every hardware merchant realizes that a clerk who reads HARDWARE AND METAL is the kind of clerk he wants, because he will be thoroughly informed on market conditions, new selling plans and the best methods of window display and advertising. The above advertisement brought in 23 replies. It cost only 67 cents.

USE THE WANT AD. PAGE.

Paraffin or Petrol

WHATEVER fuel is used, whatever type of internal combustion engine is employed, there is a model in the "Sphinx" range of plugs that will fill the bill. For farm tractors and all agricultural purposes specially designed models are available. "Sphinx" Plugs are supplied in the ½ in. (taper) gas, and ⅞ in. (A.L. A.M.) American threads in addition to the standard metric pitch; and—they are all guaranteed without time limit. A fully illustrated catalogue will be sent free upon request. May I have your inquiries?

Say you saw it in HARDWARE and METAL

If interested, tear out this page and keep with letters to be answered.

of $1.50 on five-ton lots and over. The greater decrease on five-ton lots has been occasioned through the changing of the differential between five-ton lots and one-ton lots to 50c per hundred pounds. The differential between single ton lots and less than ton lots has been changed from 30c to 35c. Pure white lead in oil is now quoted at $16.20 in ton lots and $16.55 in less than ton lots, and $15.70 in five-ton lots. The decline in white lead in oil follows as a result of the declines in the pig lead market. Demand is light in the face of the declining tendency.

Booking On Mixed Paints Satisfactory

Toronto.

MIXED PAINTS. — Manufacturers who have been booking orders for spring delivery of paint report that the volume is fairly good. Booking conditions, however, protect the purchaser as he is given the benefit of any declines that may take place in the interim and should advances take place he is protected against having to pay the advance. There has been a fair amount of sorting business but with the coming of winter weather this business has slowed up considerably.

Glass Market Shows Increasing Strength

Toronto.

GLASS, PUTTY. — There is a continued strong situation in glass, so much so that one dealer intimated that he was seriously considering advancing his prices. This dealer in question has recently returned from a trip into the glass manufacturing districts of the United States and states that conditions there are anything but promising. There is a shortage of coal, labor, and raw materials and there seemed to be every prospect that the manufacturers would in the near future again advance their prices. Locally stocks are getting low and it is only a question of time until dealers will have to enter the market at the higher prices recently quoted by the manufacturers. Demand for glass is not heavy at the present time. Putty remained unchanged at prices given in current quotations.

INCREASE IN POSTAGE RATES, NOVEMBER 2

A notice sent out by the post office authorities in the United States indicates that an advance in postal rates has been set for November 2.

This increase parallels present rates in Canada as will be seen by the schedule attached herewith:

Letters (except drop letters), 3 cents an ounce.

Drop letters (those for delivery through office of mailing), 2 cents an ounce.

Postal cards, 2 cents each.

Post cards (private mailing cards printed or bearing written message), 2 cents each.

The one cent postal card may be used by attaching a one cent stamp.

No increase in rate on circulars, printed matter and parcel post mail matter.

CENSUS OF FRENCH INDUSTRIES

Among the important measures proposed by the French Government in the preparation for industrial reorganization after the war is an industrial census, which it is proposed to make obligatory and very detailed and comprehensive. The details of the project are likely to be worked out by the newly created Economic Committee of the Government, recently established by decree, and comprising Paul Domeur, Minister without Portfolio, the Minister of Commerce, the Minister of Agriculture, the Minister of Colonies, the Minister of Transport, the Minister of Munitions, and the Minister of Provisionment. The Minister of Commerce will take part in the deliberations of this committee whenever they affect his department.

The purpose of the industrial census is to determine the nature and number of industrial machines, the extent and character of industrial equipment, and available supplies of industrial materials. There has, however, been considerable opposition to the proposed census, coming chiefly from chambers of commerce and manufacturers' associations. Objection is particularly raised to the obligatory feature of the project, on the ground that article 55 of the new income-tax law specificially authorizes the tax officials to make use of information obtained by any branch of the public service under existing laws.

TRADE INQUIRIES

(Continued from page 84.)

1380. **Wire fencing.**—A Barbados firm dealing in general hardware desires correspondence with Canadian manufacturers of wire fencing.

1381. **Galvanized roofing sheets.**—A hardware firm in Barbados desires to import galvanized corrugated roofing sheets from Canada.

1382. **Wrapping paper.**—A firm in Kingston, St. Vincent, B.W.I., makes inquiry for Canadian wrapping paper.

1383. **Zinc ores.**—A London company who import zinc ores invites offers from Canadian producers able to export regular supplies. They would also consider proposals of other minerals.

1385. **Brushware.**—An East London (South Africa) firm requests catalogues, price lists and other details on Canadian made hardware.

1386. **Hardware.**—An East London (South Africa) firm of wholesale importers requests catalogues from Canadian manufacturers of household, builders and farm hardware, farm and hand tools, and household utensils. Price lists to be inclosed.

1388. **Tools and Handles.**—A Durban firm of wholesale merchants requests samples when possible, catalogues and price lists with particulars of packing from Canadian manufacturers of shovels, spades, pick-axes, axes, farm tools, also pickaxe tools and broom handles.

1390. **Mining Material.**—A Durban firm of import merchants makes demand for supply of light rails, wheelbarrows (tubular and wood), steel plates, coal mining tools such as shovels, picks, etc.

1394. **General agency.**—A Durban manufacturers' representative seeks the representation and requests correspondence from Canadian manufacturers prepared to export wrapping paper, paper bags, galvanized iron, fencing standards and hardware lines.

1396. **General agency.**—A Johannesburg firm of shippers and manufacturers' agents is prepared to consider Canadian agencies.

1397. **Hardware, farm implements and tools, windmills.**—A Natal firm of importers making a specialty of agricultural machinery and implements, hardware, including enamelware, asks for price lists and catalogues with particulars of packing of hardware. Price lists to be f.o.b. Canadian ports.

1398. **Household goods.**—A Cape Province (South Africa) firm making a specialty of 5c, 10c, and 25c goods, asks for catalogues and price lists from manufacturers supplying these lines, chiefly kitchen utensils.

1399. **Hardware.**—A Durban firm of wholesale merchants is open to purchase from Canada, Yankee patterned handled axes, hatchets, fencing pliers, tower pincers, wrenches (all kinds), staple vises, shovels, spades, iron and wood screws, galvanized fencing staples, bright netting staples, sad irons, farm tools, and other lines of hardware. Catalogues and price lists requested.

1402. **Hardware, woodenware, leather goods, agricultural implements, farm tools, hand tools, enamelware, farm and household utensils, iron and steel.**—A firm in the Eastern Cape Province (South Africa) handling in a wholesale way lines suitable for the native trade, requests catalogues and price lists from Canadian manufacturers of the above lines.

1403. **Hardware.**—A Transvaal firm of wholesale importers requests catalogues, price lists and samples when possible from Canadian manufacturers of any line of household, building and farm hardware, farm and hand tools, kitchen utensils, wheelbarrows and shovels.

1404. **Brushware.**—A Transvaal firm of wholesale importers requests catalogues and price lists and samples when possible of brushware from Canadian manufacturers.

1405. **Carbide.**—A South African firm of engineers acting as merchants and agents in some cases, requests direct communication from manufacturers of carbide for acetylene lighting and oxy-acetylene welding and cutting work.

1406. **Agencies.**—A Durban firm of engineers, with branches in each centre of South Africa, is prepared to take up the representation for Canadian manufacturers of railway and signalling apparatus, shovels, mechanical machinery, electrical machinery, machinery specialties, steam and water packing, asbestos slates and coal tar.

1407. **Electrical supplies.**—A Glasgow firm will be glad to receive catalogues and price lists of electrical supplies, such as bayonet lampholders, ceiling roses, tumbler switches, porcelain fuses, wall sockets and plugs, etc. This firm has an import license.

1408. **Electrical supplies.**—A Glasgow firm of wholesale metal merchants asks to be put in touch with Canadian exporters of electric bells, indicators, all accessories, wirings, etc., for after the war trade.

1409. **Tool handles.**—A Glasgow firm who have a license for importation, asks for quotations on ash and hickory handles for rakes, hay forks, hoes, and miners' and engineers' tools. With a view to after-the-war business, they also wish to get in touch with exporters of broom handles.

1413. **Bolts and nuts.**—A Glasgow firm wishes to communicate with manufacturers of the above for after-the-war business.

1417. **Swedish apple wrapping paper.**—An inquiry comes for paper of the above description, 2,880 sheets in a ream weighing seven pounds. This is exactly the size required. Heretofore this class of paper has come from Sweden. It is generally packed in strong canvas, bound with iron hoops. Samples may be procured on application to the Superintendent, Commercial Intelligence Branch, Department of Trade and Commerce, Ottawa.

1418. **Nickel and cobalt**—A metal merchant in Milan, Italy, with good references, desires to buy nickel (pure, in cubes, grains, etc.), also nickel salts, such as sulphate of nickel, and cobalt metal and salts.

1419. **Nestible metal barrels.**—A firm in Boston, U.S., which is shipping cement largely to Allied Governments, wishes to secure from Canada nestible metal barrels suitable for shipment of cement.

ADVERTISING to be successful does not necessarily have to produce a basketful of inquiries every day.

The best advertising is the kind that leaves an indelible, ineffaceable impression of the goods advertised on the minds of the greatest possible number of probable buyers, present and future.

Christmas in 7 Weeks

Only 7 Weeks till Christmas Tree Time

How many homes have had their festivities brought to a sudden and disastrous ending by the Christmas tree catching fire?
Point out this fact to your customers and boost the

"FRANCO" Christmas Tree Outfit

It is a safe, sane, inexpensive way of lighting Christmas trees. Prettier than candles—no danger—no worry about fire.

The cost is small, your profits big.

If there is no electricity in the home **a battery can be used** with equal advantage.

Interstate Electric Novelty Co. of Canada, Limited

FREE NEWSPAPER CUTS
FOR MERCHANTS WHO SELL "BISSELL" SWEEPERS

Our Co-operative Cut Service has brought us superlative words of praise from discriminating and progressive retail advertisers whom we are privileged to count among our customers. ¶Like some of our other special advertising features, they are calculated to create a broad interest in a merchants store and goods. Thus a merchant is advertising his general line and this staple household labor-saving utility, which pays him an assured profit, at the same time. This is good advertising—likewise efficient and intensive as raising small berries in a young orchard or pumpkins between the corn.

WRITE FOR PROOF SHEET SHOWING OVER 100 CUTS, also for Window Displays, Show Cards, Price Cards, Folders, Etc. Whether you buy our sweepers direct or from a jobber, we want to help you sell them—and other goods.

Gifts sure to please

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

The Best Share For Every Plow

CRESCENT FORGE & SHOVEL CO. TRUE FIT TRADE MARK HAVANA, ILL. U.S.A.

CRESCENT PLOWSHARES

Fit Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge.

Made in Over 1000 Patterns

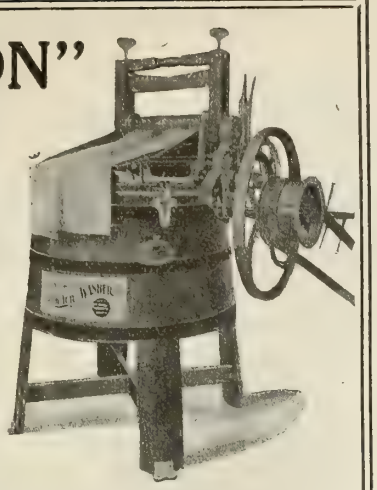
"LONDON" No. 4

FAMILY

Gasoline Power Washer



Here's a washer which stands out as a marvel of convenience and efficiency and it

SELLS TO EVERYONE

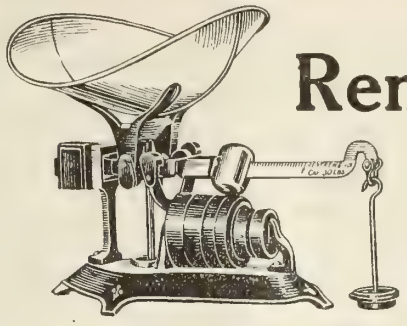
The "London" No. 4 is not limited to those who have electricity in their homes, being a gasoline power washer it can be used by everyone. And its price puts it in the reach of everyone. Big sales ahead in the country districts.

Gasoline Engine. Built like the "London" No. 3 Electric. Instead of a motor wire, belting, etc., it has a driving and loose pulley on the fly-wheel, a handy belt shift for leading the belt from one pulley to the other.

GOOD PROFITS AND UNLIMITED SALES

The London Foundry Co., Ltd.

London, Ontario



The

Renfrew

Household Scale

Capacity ½oz. to 30 lbs.

Why not push scales

Here is the handy scale that gets the housewife's confidence the minute you inform her that every Renfrew Household Scale carries with it the Government Inspector's certificate of correct weights. Every scale is guaranteed to weight correctly.

The Renfrew is strongly made, compact and handsomely designed—just the very scale nine out of ten households should have for protection against mistakes in weighing which are so expensive in these days of high cost of living.

Write for literature and particulars of our attractive selling proposition to dealers.

ARE YOU PROFITING

by the big demand for

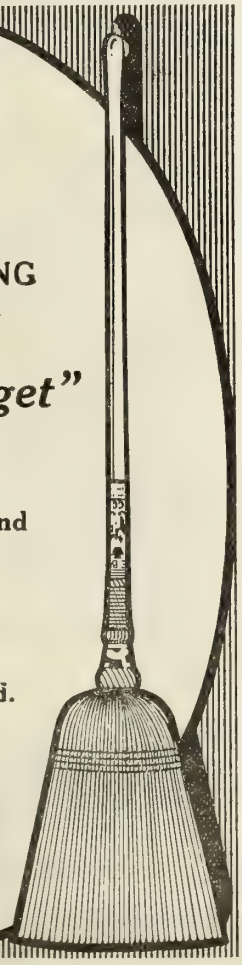
Keystone "Nugget" Brooms

The broom women demand by name?

Write for Prices, etc., to

Stevens-Hepner Co. Ltd.

Port Elgin, Ont.



The "Nugget" Broom is only one of the famous Keystone Brand Brooms and Brushes.

More-Profit Pumps ---Real Profit

No use to sell a pump that makes trouble for a dealer with his customer.

The trouble is remembered. The cost of repairs is dead loss of time and temper. The dealer suffers.

"Aremacdee" hand and motor metal pumps for force or lift use, every kind, are shown in the big catalogue.

Dealers, ask for prices and terms. Get real profits on your metal pump sales.

Chain Pipe Wrenches
Trimont Mfg. Co., Roxbury, (Boston), Mass.

"YES, SIR, that's a real hack saw. Not strapping with notches cut in the edge. Not inferior steel that bends out of shape and stays out of shape. That's a

Starrett Hack-Saw

with snap and whip to it that means business from the time it gets its teeth in the metal until the cut is finished.

"Just a hack saw, you say. But this common name won't do for a tungsten steel blade like this. Why, every tooth in it is milled and set just as if this hack saw were to establish the Starrett reputation.

"And it fits its job, too. Maybe you don't think that's important, but try it yourself.

"You don't call in a grocer when you have a toothache. But there are some mechanics who try that stunt with hack saws—put a brittle, coarse-toothed blade on a piece of tubing and then wonder why it strips. Or use a fine-toothed saw on brass rod and wonder why the teeth clog and the blade snaps.

"You can't treat hack saws mean any more than you can people; and that's another reason why I like Starrett Hack Saws. You don't need to go wrong. The L. S. Starrett Company have got good saws and they know how to pick the one that does the work best. Guess that's why they say that Starrett Hack Saws **cut faster and last longer.** I know they do."

Send for catalog No. 21MA.

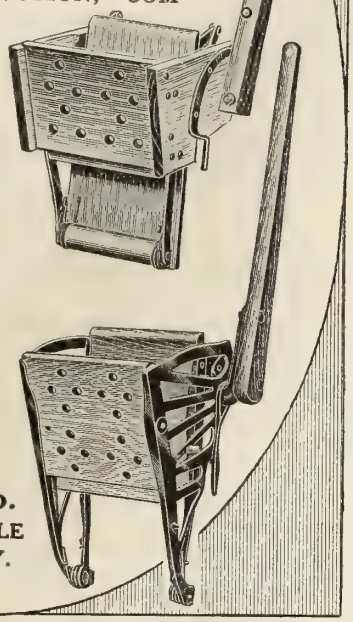
"White"

MOP WRINGERS

EASE OF OPERATION, THEIR GREAT UTILITY AND THEIR SUBSTANTIAL CONSTRUCTION, COMBINED WITH THEIR PRICE, MAKES THE WHITE MOP WRINGER A RAPID SELLER.

Made of malleable iron and the best of hard woods — Maple or Birch. Fits any kind of pail and wrings the mop thoroughly.

It has more than one use —often used for fruit and vegetable presses and works perfectly. The advent of the White Mop Wringer proved a boon to the housewife—it sells itself and is a good profit-maker.



White Mop Wringer Co.
FULTONVILLE
N.Y.

Sell Handles that are Most in Demand

STILL'S

There are more of STILL'S HANDLES sold in Canada than any other make. What's the logical conclusion of this fact?—*they are the best.*

There's a Still Handle to meet every need: Axe, Pick, Sledge and Hammer Handles; Cant Hook and Peavie Handles.

There's nothing like selling the best of everything. Good profits in our handles, too.
